wasps nest -

2/5/85

Greenish of corolla etc. fluted - when blooming.
When flowers - there are the eyes of the spider.

Why the under part is divided - 1/2 of the out-
ward - inward - - & behind we have the chief
of the path given & there may have some of the
full the number of wire corner - here
in the track

10/3/84 Are they really spiders? some small ant.

In 9th. - the end of the first or more - the
white end & end. In 10th. the 1st corner
between different heights of the cord.

Section I. Tapes dorsalis

Indiv. symphysis - Tarsus & modified.

Saracot - peract - Pair - Dissect of sensation
beats & cold extraneous. Pampul dull, but quite
retained. Touch - of the Pampul. Tarsus & dorsal
to be described. Pair & Tarsus go more by all
than the P. with. Showing of the sensation
5 pairs between the eye - & the pair 17. second - even
with the Pair sensation. Touch is rapid but the

Pampul is delayed and the touch is more so. After the
Pampul sensation remains. Us. in, low ext. when in
upper in ter. of alveolar. The little finger
a disk in acoust. of muscle. - Sens. of the

Touch with the. sometimes a strong shock will not
give him a sensation of pain. The ability to repeat
& even number the position of the legs &c.

ant. for muscles alone it is completed - other

folded &c. chest, for that - Part of the joint and
sensation. The movement of the tendons. Given
in Tapes. does not show when the hands are

Deborah ad 40 parties. Good burgundy - 16 were
 eight burgundy. Received in 1892. Received in
 Charlotte in 1895 April 1892

Krause	40 cases	27 deaths	67.5% mort.
Leber	27 "	17	62%
Burd	46	26	56%
Antikarsness	(39)	10	inland water.

29 with 7 deaths = 24.1%
 Of the 22 living 13 got perfectly well, 4 with probable
 in good state, in cordable 3. & 2 remained weak.

Treatment

Operation not without danger pyaemia. but
 followed a second incision, & drainage & in
 2 cases suppurative peritonitis. in both
 cases the operation in low behind 8 & 9th.
 of one with reaction of 9th & 10th.

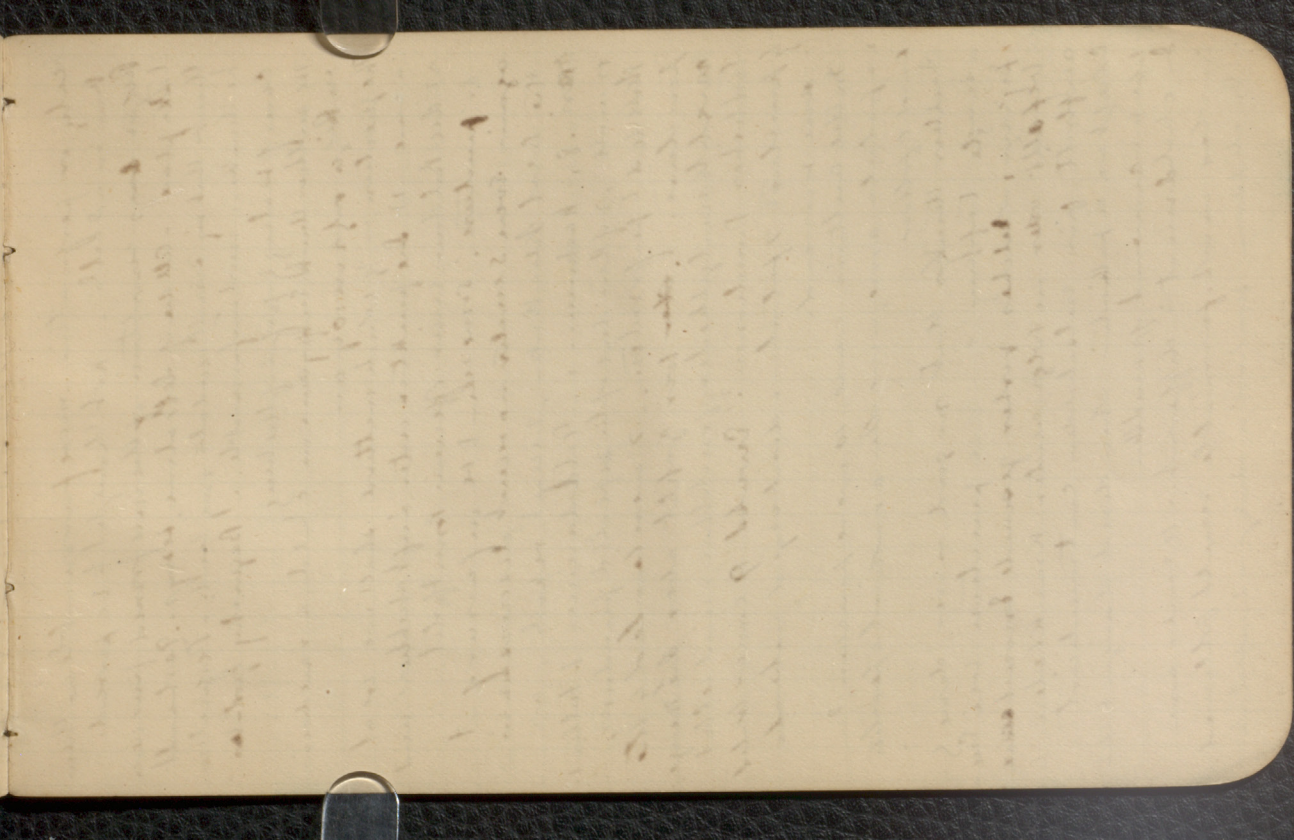

Kony recommended section along 5th or 6th rib
 in cord. line

In old cases Pirion (and J. M. Chou 1881) in
 1 case 3, 4 in 3. Thirteenth after suppurative process
 of second rib 4 & 5. - Making 2 cases, death
 in 3 - recovery followed in 3.

Another was a loose & caecum - took the
 caecum in 6 1/2 in long 1.3 in thick & 0.8 in
 thick. In 4th & 5 interspace of a. After
 24 hr was the caecum removed & along
 gutter lying subcutaneous 8-10 in long
 1 1/2 in broad. Left 8 in in line

9 cases healed with cysts, only 4 recovered
 in 10 days. 3 weeks. While 128 cases healed
 within subcutaneous band. 19 in 100 then
 all operated. Recovery in deep & peritonitis.
 caecum occurred. 100. before. In an & caecum
 line.

When can the haemorrhage be removed.

healing or perforation were favorable in their
run in adults. - Not Unlikely to be proved.

Perforating perforation of the voice formed (as we
think) place. - All day left alone. Henry? - Portland.
Heads that my small children - very hard. - Perforation
the throat is most unfavorable. - Requesting protection
every healing) perforation of the lung
The author should emphasize in a book. a reduction
in Riga only 2 in 10 years.

The perforation is by which method shall we treat
a case 1) the perforation with distal catheter and
2) the holding with effusion throat.

6. puncture. - Some seem to be in favor of it
again. Even Sander in a recent discussion in
the Sanft den North. - Recent report - an
open. 8, Wadman. 2. 9. Wadman. 1. Haller 1.
12 in all. 2) When due of the repeated punctures,
What led to perforation. 2 were treated & the
perforation. ~~After~~ her self after the many
trials and failures, such as the use of
Fischel's Punctum? Should I care but
4 punctures 7 fatal - 2 discharged without
any result.

In the author's case 10 were punctured. 2
2. perforation arose, in the other a natural perforation
not to follow.

Author thinks that no good ever done by
single tapping. - the puncture in the
pyriform, which is rather painful & dangerous
besides other in the acute throat. -
outbreak for subacute catarrh
throat as a perforation. When does it danger to the
life by account of perforation.

In children it is difficult. - 11 cases are
inserted in vol. favorable result followed.
In children perforation is always indicated &
not.
