

CUS417/52.18

(Letter to Dr. Cushing)

May 17th, 1906.

7, NORHAM GARDENS,  
OXFORD

Dear Cushing:-

Will you take the following subjects in our System and talk over details with McCrae? Evidently, there is not going to be any special hurry for Vol. VII, so that you will have plenty of time.

(1) Tumors of the cord, compression of the cord, lesions of the cauda-equina and conus--all of these form a surgical standpoint, as Buzzard takes some of the medical side. (2) Abscess of the brain. (3) Hydrocephalus.

I enclose you a nice letter from Payne. By Riviere's mistake the copies of the Garth paper were sent out with my compliments instead of yours,

Sincerely yours,

WM OSLER

*Riviere's? the binder?*

*"Sow" (= care?)
