December 6th, 1907.

Dear Mac:-

Yours of the 20th just in by late post. I should say the Polycythaemia should go in with the blood articles, but how about remuneration for the *poor devil* who has written the other section? I think he should be paid. It would be my mistake so let me know and I will arrange with Leas to pay [Lyon.] I have an extraordinary case of it here--huge spleen and 10 *millia⁺* with abundant ~~microscopic~~ *nucleated red cells* I hope you will have the aneurism and *arterio-sclerotic* sections within ten days--they are almost ready. Pick out a few good illustrative figures for the aneurism. Thanks for the memos about endocarditis which I will add *and correct*

I have the Atkinson at last for you --'tis being bound for Xmas. Do not read too much *of it* or the System will never get out. We are making the additions to Gibson.

Beautiful weather lately. Mrs. O. well. I wish we were out for Xmas. Love to all the boys.

Yours ever,

W. Osler.
