Dear Harvey

You will have had my birthday letter & address. Grace has written since we came here. How I wish you were all with us such a sea! Swanage is not in it. We are enjoying the bathing so much. Love to all the darlings. What a tragedy about your nephew I forgot to tell you how sad we were to hear it.

I am rewriting a section on cerebral palsies of children for the text book Two questions (1) On how many birth haemorrhage cases have you operated? & where have you published the results? I know your first paper 2. Have you ever operated on the acute encephalitis of the two-year old - the fever-convulsion - *curia* & hemiplegia case - which is as clearly cut a disease - even more so - than poliomyelitis? It is a common disease as witness the scores of hemiplegias in our Institutions for the Feeble minded.

'Tis nice to hear that you are so well.

Yours ever

W. O.

Interesting to hear of the prevalence of the lethargic encephalitis in America. I hope some one will settle its relation to H-- Medin &c.
