Dear Shepherd,

I saw ^SCastells today. The tumor is now very evident. I think he should be operated on - if on the bowel which is most likely the chances are better early. There is a communicated pulsation on deep pressure,- the mass is in the rt. lower qdt of the umbilical region - out of the way of the gt vessels. He will wait a few weeks longer & then if not mending will come to you. Let me know how he gets on. I am so glad that Cecil likes her life in London. It is a delightful thing to have her with such nice people. What time shall you go over?

Love to all your people & kiss Dorothy for me

Yours sincerely

W Osler
