

growth against the left tract, the same picture of atrophy is present  
 though somewhat more advanced. In addition to the atrophy of the crossed bundles, fasciculi  
 The uncrossed macular fibers have also

both macular and peripheral are also  
 atrophied markedly here, and uncrossed fibers to the nasal field are

considerably damaged. Nevertheless, the number of preserved fibers

are so numerous that, <sup>if there have been relief from pressure</sup> they all be made to functionate, the re-

sulting vision would <sup>probably</sup> have been considerable.
