

From Canadian Journal. 1881. Vol. VI. p.258.

MCGILL UNIVERSITY, FACULTY OF MEDICINE, SUMMER SESSION, 1881. Examination for Clinical Prize (\$50 Microscope), offered by Dr. Osler. Drs. George Ross and W. Osler, Examiners.

I. Written paper, one and a half hours.

1. A man, aged 40, comes to you complaining of headache, vomiting and dimness of vision; pulse 70, temperature normal; general health has been tolerably good; present illness came on after a few days' indisposition.

State (a) your method of procedure in the examination of patient; (b) the conditions which might bring about such symptoms, and the points to be attended to in distinguishing between them.

2. How would you proceed to map out the liver dullness? State its normal limits. Mention conditions associated with (1) increase, (2) diminution of its area.

3. Distinguish between the conditions you have met with during the Session, accompanied by a dull percussion note in one infra-scapular region.

4. Sketch the main features of any case of heart disease which you have studied during the Session. - 150 marks.

II. A case to diagnose and prepare a written report upon. Condition of fundus oculi and larynx to be given. - One hour. 150 marks.

III. Examination of sputa, vomit, faeces, and urine; chiefly microscopical. Twenty minutes. - 50 marks.

Mr. R.J.B. Howard, B.A., was the successful candidate, obtaining 322 out of the possible 350 marks.

*Before the opening of the summer session in the middle of May, before their departure the Faculty of Medicine had announced that a clinical prize of a \$50 microscope had been offered by Dr. Osler for the student passing the best who should pass with highest marks a special examination at the end of the summer session in July. George Ross and Osler were to be the examiners but as Osler was away this must have devolved upon Ross and "Mrs R.J.B. Howard [Palmer Howard's son] was the successful candidate, obtaining 322 out of the possible 350 marks." (H)*

- (1) exceeding well thought out examination*
- (2) It was an admirable test, comprising a written paper,*
- (3) a practical examination for patient necessitating the use of the ophthalmoscope and laryngoscope, and (3) microscopic examination of various specimens. (Canadian Journal)*
