

W.O., to J. George Adami.  
Feb. 4th. 1897.

1 West Franklin Street.

Dear Adami: My supposed case of colitis polyposa turned out to be (when turned up and inspected with one of Kelly's long tubes) polypi of the rectum only. There were very interesting mucoid bodies in the stools, which had come from the polypi, and resulted from degeneration of the epithelial cells.

Thanks for the photographs which are very good - and may be useful hereafter.

About the Congress - it would be better to take one organ thoroughly I think. What a year of meetings! We shall be used up with them. Foster writes that he is coming to Toronto - to Montreal too, I hope,

They have asked me to give the address in medicine, deuced good of them! I shall be delighted. The prospects are A.1 and we shall get many of the very best men.

Love to 'little Mary Cantlie'. Mrs. Osler sends kind regards.

Sincerely yours,  
Wm. Osler.

*During the year in addition to his fortnightly attendance at these various  
In addition to these more formal meetings he accepted/appears from  
friends to address some of the smaller and more local societies. Then on  
July 22<sup>nd</sup> in the report of ?? he <sup>subsequently</sup> gave an excellent review of the  
Montreal question <sup>was the first of</sup> before the Medical Society of the County of New York <sup>and probably submitted to a reception and a dinner and</sup>*

*In the same month he gave a address at the  
Committee report of the  
Medical Society of the  
County of New York  
which was  
held on July 22<sup>nd</sup>*
