

(typewritten)

(To Lt. Col. Leonard Rogers, I.M.S)

13, Norham Gardens, Oxford,
May 4th, 1908.

Dear Rogers:

Thanks for the paper.* It should do very well for the journal. It is a very remarkable condition. I am so glad you have called attention to it. Where could I find any statement about the prevalence of aneurism in India?

I think your book is going very well. The United States Army has taken a block for distribution and the reviews have been very satisfactory. You did not make the Royal Society this time. They have got rather a 'set' against the doctors at present.

Sincerely yours,

W^m Osler.

P.S. I am afraid your paper cannot appear until the October number of the journal as we are full for July.

* This letter refers to my paper on "extensive atheroma and dilatation of the pulmonary arteries, as a not very rare cause of fatal cardiac disease in Bengal", which was published in the Quart. Journ. of Med.,ii, 5, p.1. Sir Wm. wrote to me on Dec. 30, 1918 to ask if I had seen that this disease had since been described and called by another's name. - L. R.
