To J. Maclean

February 9th, 1912

Dear Mac:-

I send you to-day the Disorders of Metabolism Section. I have cut out a great deal in Gout and re-written a great part of it. The same with Diabetes. I have made one or two memoranda about the treatment. Scurvy we put in. There is not much change in it and Rickets. Beri-Beri is a new section and reduced. Obesity and the Lipomatoses is practically new. You probably have made some changes in the treatment. I have only put in Haemochromotosis and Ochronosis, not Phosphaturia and Cystinuria, as these really belong more to the Urinary Section.

I cabled Appletons again on the 5th asking specifically about the proofs and why there should be the delay, but have had no reply. I expect you will have a devil of a job before you have finished with this, and will be sorry you ever undertook it!

Sincerely yours,

Wm. Osler.
