(April, ²⁵ 1912) 1911

25th.

Dear J. T.

So glad to have the story of the Medical Club of 19 - of the good fellows who helped so much to make my life happy in Phila. My love to the present members. It is very sad to have Musser taken off so prematurely. He was here last summer looking very well, but the attacks which he described were evidently true angina. It is a disease of doctors. We had a scare a few weeks ago with Revere at school - Pneumonia of right lower lobe, but fortunately the crisis occurred on the 6th. day and he never had a bad symptom afterwards. We have been away in Italy and have just returned.

Are you coming over next summer?

Give my love to Nell and Mellor.

Yours ever,

(signed) Wm. Osler.
