International Congress of Med

21st January, 1913.

Dear Garrod,

Von Noorden wrote stating that Weichselbaum the Vienna Pathologist, would be very glad to consider a paper on diabetes, relating to its clinical features, at our section. I have written to Herringham, who says there would be no objection, and wishes to know if he should be put in as a third Reporter or whether his paper should go as an original contribution. What do you think? If he could get it here by February 28th, it could be printed with the other reports.

Sincerely yours,

W Osler

13. Norham Gardens.

Thanks for memo about
the meeting last week
