

CUS 917/118.90

(From secretary's notebook)

(To Prof. Royce,
Harvard College)

Dear Royce:

Oct. 28th, 1914.

Charmed to have your book. I hope your unusual suggestion may be carried out. It is a deuce of a mess, this old humanity has got into. We will never be any different. I don't suppose we are a bit better than the Greeks - in some ways not so good. My chief comfort is that I think that after all we are living in the childhood of civilization. What are the few thousand years since Hammarubi in comparison with the millions since the Stone Age.

I hope you are in as good form physically as the book shows you are mentally. You must be, I am sure.

Lady Osler joins me in warmest regards.

Wm. Osler.

Osler would never be any different, even in no war, and the history he sets to as physics in a sense the President of the Vancouver Medical Association the following note: 1915

Dear Ruth: That
