

January 22nd, 1915.

Dear Sprigge,

I was at the America Hospital, Paynton this week when I find an admirable system of card catalogue classification of the cases + it seemed to me it would be an admirable model for some of the other hospitals. I asked Eastman to write it out. I think it would be worth putting in the Lancet...!

As you know the War Office has taken Adams' advice + appointed a committee to supervise the medical + surgical history of the war. It would be a great matter to get the notes all systematically arranged in one system.

Please make no reference to that newspaper canard about me. It arose through an arrangement with Berkett that when they had their hospital organised in France to go over, + help them should they have any serious typhoid outbreak.
