### The Bezoar Goat

This Drawing is from the Bezoar in the  
British Museum

it measured from the top of the head exclusive  
of of horns 5 feet or  $3\frac{3}{4}$  of an inch.

The length of the horn from the Root to of  
ending  $10\frac{1}{2}$  from thence to the tip  $5\frac{1}{2}$   
the face from the top of the head to of bottom of  
chin is 1<sup>th</sup> 3. inches

from the Chin to y<sup>e</sup> bottom of the Shoulder  
1 foot 2,

from thence to y<sup>e</sup> knee 1 ft 3 in

from the knee to y<sup>e</sup> bottom of y<sup>e</sup> foot 1 3 in

The length of the body from the breast  
to the Tail is 3 ft 11  $\frac{1}{2}$  in.

the height from the Bottom of the  
back to the ground is 3 ft. 8 in.

The Colour of a ~~yellow~~ cream Colour  
yet the streak of the face & fore part  
of the legs is black.

it has a beard under the Chin & on  
the sides of his mouth not on the breast  
as Linnaeus mentions.

it is

MIAMMALIA, PECORA. CAPRA

N<sup>o</sup>. 14. ANGORENSIS

*C. Angorensis* Lana ad pedes, usque dependet  
nivea, sericum provocante camelina dicta.  
cornua torta, ad latera protracta, ut ovis hispanica  
Auricula plana lanceolata declinata, nec erecta  
canaliculata. L. S. N. ed. 12. p. 95.

Habitat in Angora.

The Mohair Goat.

This Goat or sheep for it is difficult to  
distinguish which I had presented to me  
by Mr Fremean a very worthy merchant  
who had a house in Smyrna. but afterwards  
came to reside in England & lived at Hackney  
they were sent as the male & female but  
differed so little I suspected them to be female

The Drawing is so exact and agrees so well  
with the above description of Linnæus that  
it is not to be doubted but it is the animal  
he intended to describe. but the preceding  
description by the title *B. Hircus Angorensis*  
is of a different species. which also came from  
Angora. whose hair is long and silky but not  
like Wool. it was remarkable that when

one of the Beasts I kept Died the other stood  
over it till it died also. I thought with no  
other Distemper than grief, which I have also  
observe to have hapend to some birds.

the silk this produces of a Snow white  
colour hanging down in long curls to its feet  
is a sufficient distinction by which it may  
be known from all other animals but as it  
wants a beard I should be inclined to class it  
rather among the Sheep than Goats. if Lincus  
had not called it a Goat, it feeds chiefly on  
the young branches & bark of the Oak. & is  
bred in Angora which was by the Antients  
called Galatia.

MAMMALIA. PECORA. Capra.

Hircus Angorensis.

C. angorensis. Journ. et. it. 2. p. 85 t. 155. Bris. quadr. 64. Habelg. iter. 200. Olear. mus. t. 10. f. 2

Habitat in oriente, in montosis. Hircus & capra cum Haedo, victitans ramulis variis, frondibusq; arborum Lichenibus, hospitatur in Europa

Pecus infidum, bellicorum, saliens, salax, hircum olens, decurtians; corio tenaci indutum, lana caprina tectum; arumco barbatur, caseorum pedum castratio singularis. edit etiam cicutam.

The Angora He Goat.

This goat & its Female was brought from Angora in the year 1770. but differs intirely from the goat next described as the Angora goat in his 2<sup>d</sup> Description. & of which see the Description & fig. hereinafter N<sup>o</sup>.

This animal having a beard I place among the Goats.

MAMMALIA TESSERA. 21

Faint, illegible handwritten text, likely bleed-through from the reverse side of the page. The text appears to be organized into several paragraphs or sections, but the characters are too light and blurry to transcribe accurately. Some words like "Mammalia" and "Tessera" are faintly visible at the top.
