3821  
FROM  
THE LIBRARY  
OF  
SIR WILLIAM OSLER, BART.  
OXFORD

G. A. POYNDER,  
ANTIQUARIAN BOOK-SHOP,  
NEXT TO GENERAL POST OFFICE,  
READING.

3821. *The same.* The birth of Mankynde, otherwise named the womans booke. Newly set foorth, corrected, and augmented. Whose contentes ye may reade in the Table of the booke, and most playnely in the prologue.

By Thomas Raynalde Phisition. sm. 4°.  
[Lond., R. Jugge], (1565).

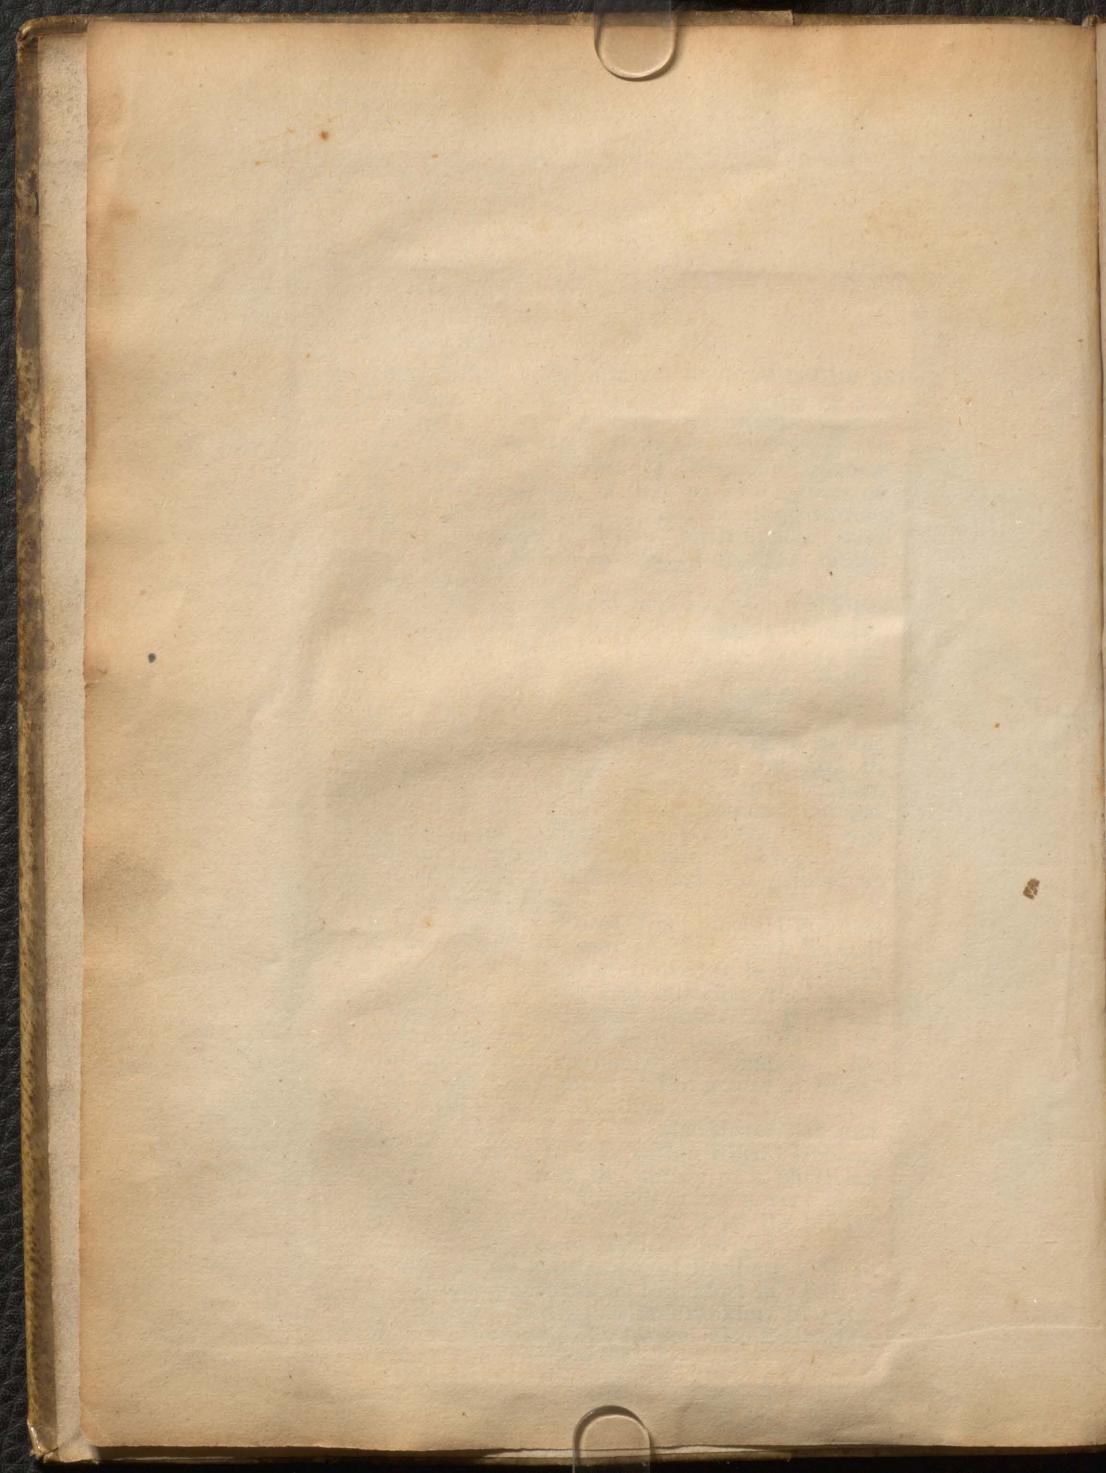

Black letter. The title-page has an ornamental border containing the monogram-motto of Richard Jugge, whose pelican device occurs under the date at the end (leaf 131). There are 2 leaves (4 plates) of woodcut 'birth fygures'; but the anatomical plates are wanting, with the exception of one fragment, the 'thirde figure of women' (leaf 47<sup>v</sup>) which has been pasted on the first birth figure; leaves 89-90 (O4-5) also are missing.

No. 8 in Klein's list of English eds. (and fig. 13 of the plate). Ballantyne (p. 316) describes this ed. and reproduces the anatomical figures, which, taken from Vesalius, were added in the 1545 ed.

The 1st ed., 1540, was an augmented translation by Richard Jonas of the 'De partu' of Rösslin (no. 3819); the 2nd, 1545, was "revised from top to toe" and enlarged by Dr. Raynalde, who also edited the 1552 ed. In the present ed. the Prologue, most of bk. 1, and ch. 6 (on 'bellyfyng', i. e. cosmetic, medicines) in bk. 4 are by him; chs. 1-5 of bk. 4 are by Jonas; and bks. 2-3 are Rösslin. The first 3 eds. were printed by 'T. R.' or 'Tho. Ray.', whose name, like the editor's, was Thomas Raynald.

For a discussion of Raynald as a printer see Ballantyne (pp. 299-302) who doubts if the physician and printer were the same. Duff (no. 6897, p. 130) seems not to doubt it. [W. O.]

Mr. W. H. Buckler, in a personal communication (1924), suggests that Dr. Raynalde, the editor, may have been a Thos. Raynolde of Merton College (B.A., 1518; Fellow, 1520) who, through the influence of John Chambre, physician to Henry VIII, became chaplain to Queen Jane Seymour. This connexion and the fact that he visited Paris both have some significance (cf. Ballantyne, pp. 304-6). He should not be confused with Thos. Raynoldes, or Reynolds, B.A. in 1522, Fellow of Merton in 1526 and later Warden.

*C. H. 1610*

Nicholas porry his booke of  
Ifeot, in the countee of oxon yaman

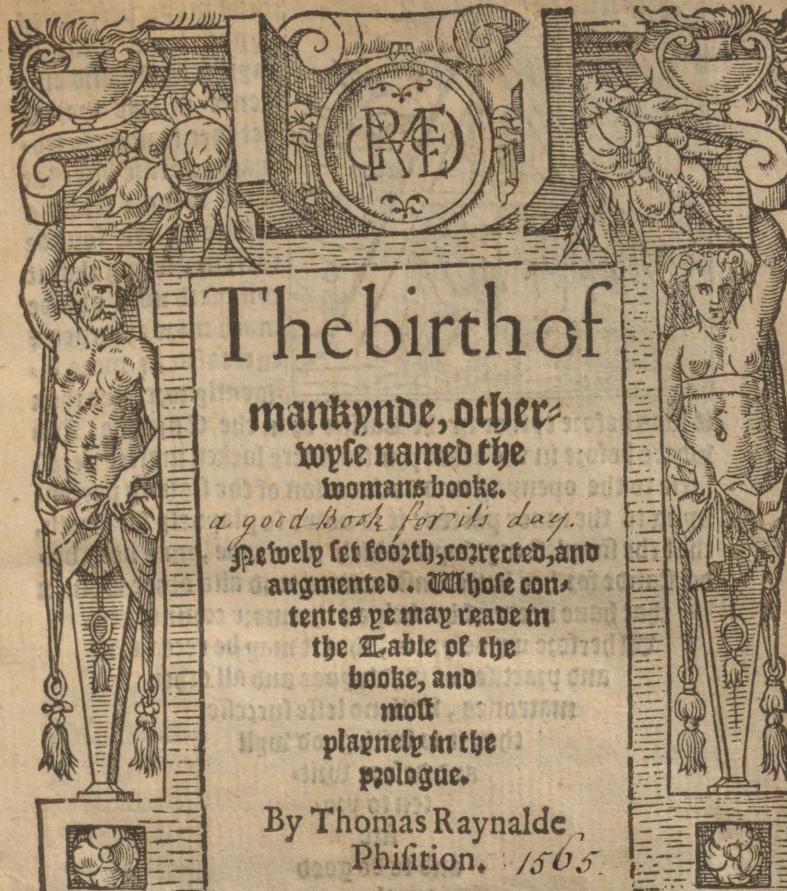

1 ff reserued

For all the sins that I have don Lord  
Lid me out of hand and make me not

THE  
BIRTH OF  
MANKYNDE, OTHER-  
WYSE NAMED THE  
WOMANS BOOKE,  
A GOOD BOOK FOR ITS DAY.  
PEWELLY SET FOORTH, CORRECTED, AND  
AUGMENTED. WHOSE CON-  
TENTES YE MAY READE IN  
THE TABLE OF THE  
BOOKE, AND  
MOST  
PLAYNELY IN THE  
PROLOGUE.

By Thomas Raynalde  
Phisition. 1565.

1565

Be it some chus maye perhappes  
synde some lacke of  
sayfbsalnesse and dili-  
gence in this woske:  
yet ther is none so fro-  
ward to denie but that  
there is some fruite &  
profite to be founde  
therin, seeing that it  
commeth now abrode  
much more enlarged &  
encreased, & more di-  
ligently corrected then

it was before eyther in the Latine or in the Englishe. And  
where before in the other printes, there lacked matter neces-  
sarie to the openyng and declaration of the figures party-  
nyng to the inner partes: it is nowe so playnely set forth,  
that the simplest mydwyse whiche can reade, may both un-  
derstande for her better instruction, and also other women  
that haue neede of her helpe, the moze commoditie.

Wherfore my desyre is, that it may be receaued  
and practised of mydwynes and all other  
matrones, with no lesse successe,  
then it is with good wyll  
and desyre writ-  
ten to pro-  
fite  
and to do good  
to other.

VII. a Prologue  
to the women  
readers.

In this i. Cha-  
piter is briefly  
declared the co-  
ntentes of the  
first Booke.

Capit.i.

In howe many  
coates the body  
is lapped or in-

fol.i.

uolued Cap.ii.

Here is declared what the Muskles be. Cap.iii

fol.iii.

Of the Bell called Peritoneum. Cap.iii.

fol.v.

The declaration of the names and nature of  
the Matrix. Cap.v.

fol.vi.

Of the wombe & his partes. Cap.vi.

fol.vii.

Of the mother port. Cap.vii.

fol.x.

Of the besselles of seede called the stones, with  
other thereto apperteynyng. Cap.viii.

fol.xi.

Of the seede bryngers. Cap.ix.

eodent.

Of the office and vse of these seede bryngers.

Cap.x.

Of the way by the which the seede is sent from  
the stones, to the angles or corners of the ma-  
trix. Cap.xi.

fol.xix.

Here is declared the situation of the bladder in  
women. Cap.xii.

fol.xxi.

A ii

Of

Of the baynes which resort to the Matrix, and  
the partes thereof. Item of the Termes and  
theyr course, with the causes thereof. Cap.  
xiii. fol. xiiii.

Of the three calles or wrappers wherein the  
infant is lapped. Cap. xiii. fol. xxix.  
which of the three Matrix baynes conteine the  
Termes, and how the mylke commeth to the  
womans breastes. Cap. xv. fol. xxxv.

The declaration by letters of the figures so-  
lowyng, wherein be set forth to the eye every  
part in woman mentioned in this booke be-  
fore.

Of the fyrt figure. fol. xlvi.

Of the seconde figure. fol. xlvi.

Of the thirde figure. fol. xlviij.

The fourth figure. fol. xlviij.

The fift figure. fol. xlviij.

The syxth figure. eodem.

The vii. viii. and ix. figures. fol. i.

### C The Table of the seconde Booke.

 If the tyme of birth, and whiche  
is called naturall or unnatu-  
rall. Cap. i. fol. li.

Of easie and bneasy, difficult, or  
dolorous delyueraunce, & the  
causes of it, with the signes  
howe to know and foresee the  
same. Cap. ii. fol. liii.

Howe a woman with chylde shall vse her selfe,  
and what remedies be for them that haue  
harde

- harde labour. Cap. iii. fol. lvi.  
Remedies and medicines by the whiche the la-  
bour may be made tollerable,easie, and with-  
out great paine. Cap. iv. fol. lxvii.  
Howe the seconde or seconde byrth shalbe for-  
ced to issue foorth, if it come not freely of his  
owne kynde. Cap. v. fol. lix.  
Howe many thynges chaunce to the women  
after theyz la bour, & how to auoyde,defende,  
or to remedie the same. Cap. vi. fol. lxxiii.  
Of aborcementes or untimely byrthes, and the  
causes of it, and by what remedies it may be  
defended, holpen, & eased. Cap. vii. fol. lxxxiii.  
Of dead byrthes, and by what signes or tokenes  
it may be knowen, by what meanes it may  
also be expelled. Cap. ix. fol. xc.  
In the last Chapter of this booke be bresly re-  
sited certayne expert medicines, whiche be  
most requisite to the cheefe purpose entended  
in this present booke. Cap. x. fol. xcv.

C The thirde Booke.

In this fyfth Chapter  
of this third booke  
is fyfth declared the  
matters therin con-  
teyned, & then how  
the infant newelye  
borne must be han-  
dled, nourished, and  
loked to. Cap. i.  
folio. xcviii.

Of stynkyng breath. fol. eodem  
Of the ranke sauour of the armholdes. eodem.

¶ Here endeth the Table.

# A Prologue to the wostenreaders.

Ere in the begynnyng  
of this presente Pro-  
logue, I wyl folowe the  
example of them, whi-  
che when they byd any  
ghettes to dynner or sup-  
per, are wont fyrt to  
declare, what shall be  
their cheare, what fare,  
and howe manye dishes  
they shall haue, pray-  
yng them to take it in good worth, and to looke  
for neither better ne worse then hath ben men-  
tioned of: And euен so here wyl I do. Before  
that ye enter into the readyng of this little trea- The entent  
of thauctour  
tise, I shall succinctly in fewe wordes recite the  
summe and cheefe contentes of the same, with the  
utilitie and profite whiche may ensue to the dili-  
gent and attenteive ouerreader thereof, to the ende  
that ye of these thinges beyng first well aduerti-  
sed, may haue the more or lesse courage to em-  
ploy your labour in ouerlokyng and perusyng of  
the same. For commonly it doth occasionate anye  
man to be the more prompt, redy, and wylling  
to take Payne, when he is assured or certified of  
the profite, purpose, and fruite thereof comming,  
and lykewyse it is a great pricke or allurement,  
entising and mouing a man to reade any booke,  
when he is somewhat fyrst admonished of the mat-  
ters comprehended and contayned therein.  
Wherfore nowe to come to our purpose, ye  
Bi  
shall

The prologue.

The more  
part of this  
ooke tran-  
slated into  
Englishe  
three or  
fourre yeres  
past.

The name  
of this booke.

I shall vnderstande that about three or fourre yeres  
passte, a certayne studious and diligent clarke,  
at the requeste and desyre of dyuers honest and  
ladde matrones, beyng of his acquayntaunce,  
dyd translate out of Latine into Englyshe a great  
parte of this booke, entiteling it accordyng to  
the Latine inscription De partu hominis, that  
is to saye, Of the byrth of mankynde: whiche we  
nowe do name, The womans booke: for so  
muche as the most part, or well neare all there-  
in entreated of, doth concerne and touche onylie  
women: In whiche his translation he varied  
or declined nothyng at all from the steppes of  
his Latine aucthour, obseruyng more fidelite  
in translatyng, then choise or discretion at that  
tyme in admitting and allowyng manye thinges  
in the same booke, greatly needyng admonition  
and wary advise or counsell to the readers, which  
otherwyse myght sometimes vse that for a helpe,  
the whiche should turne to a hinderance. Wher-  
fore I reuoluyng and earnestlye reuisyng from  
top to toe the sayde booke, and herewithall consy-  
dering the manifolde vtiltie and profite whiche  
thereby mought ensue to all women (as tou-  
chyng that purpose) yf it were more narowlye  
looked ouer, and with a strayghter iudgement  
more exactlye euerye thyng therein pondred and  
tryed, thought my laboure and paynes shoulde  
not be euyll employed, ne vnthankfullly accep-  
ted and receaued of all honest, discrete and sage  
women, yf I after good and diligent perusing  
thereof, dyd correct and amende suche faultes in  
it,

# The Prologue.

it, as seemed worthye of the same , and to aduise  
the readers what thinges were good, or intolle-  
rable to be vsed, whiche were daungerous, and  
whiche were vtterlie to be exchued . The which  
thing I haue not onlye so done , but ouer this,  
haue therewnto adioyned and amnered dyuers  
other more experimeted and more familiere  
medicines . And farther haue in the fyrt booke  
set forth, and euidently declared, all the inward  
partes of women (suche as were necessarye to be  
knowen to our purpose ) and that not onlye in  
wordes, but also in liuelye and expresse figures,  
by the whiche euery part before in the booke de-  
scribed , maye in maner be as exactly and clearely  
perceaued , as though ye were present at the  
cutting open of Anothomie of a dead woman.

And thynke not the vtiltie and profite of this fyrt booke , and knowledge thereof to be litle or table <sup>of</sup> first  
of small value , but take it as the foundation booke is.  
and grounde, by the perceyuerance whereof, your  
wittes and vnderstanding shalbe illuminate  
and lyghtened , the better to vnderstande, howe  
euerye thyng commeth to passe within your bo-  
dies in tyme of conception, of bearyng, and of  
byrth. And farther , by the perfect knowledge of  
this booke , ye shall clearely perceauue the reason  
of manye diseases whiche happen peculiarielye to  
women, and the causes thereof, by whiche per-  
ceyuerance , agayne ye shall haue the readyer  
vnderstanding howe to withstand & remedie the <sup>The vtiltie</sup> of the perfect  
sayde infirmities or diseases . For note ye well, <sup>knowledge</sup> that as there is no man whatsoeuer he be, that <sup>of Anotho-</sup>  
<sup>ges anner-</sup>  
<sup>ed & newely</sup>  
<sup>this booke.</sup>  
<sup>The con-</sup>  
<sup>tentes of the</sup>  
<sup>first booke.</sup>

The prologut.

shall become an absolute and perfect Phisition, vnlesse he haue an absolute and perfect knowldege of all the inwardes and outwardes of mans and womans body: euē so shall ye never groundlye vnderstande the matters contayned in the seconde booke, or anye other communication, or writing, touchyng the same intent, except ye first haue true and iust cognoissance in the fyrt booke. Agayne when that a woman commeth to a Phisition for counsell, concerningyng somethyng that maye be amisse in the parte: the auns were of the Phisition and reasonable allegation of causes to the same infirmitie, is manye tymes obscure, darke, and straunge, to be comprehended by the woman, for lacke of due knowledge of the situation, maner, and fashion of the inwardes. And truely when a person is sickē or diseased in anye part, it is halfe a comfort, yea halfe his health to vnderstand in what part the disease is, and howe that parte lyeth in the bodye. This knowledge also ministreth yet a farther inger and policie to inuent infinitelie the better howe the medicine shoulde be applied, & after the most profitable sort ministred and set to the diseased plot. To be short, all the wittines and artificiall craftie inuention, and diuers maners of ministrations in the noble science of Phisiche, procedeth and springeth of the profounde knowledge of Anothomie. Therefor mine advise & bittē counsel is, that al women in whose handes this little booke shall chaunce to come, with all diligence do force them selues perfectly to the understandyng of this fyrt booke:

The coun-  
sayle of the  
auctour to  
the readers.

Wel

# The Prologie.

well assyryng them that they shall not repent them of their small paynes bestowed in that behalfe. And to the ende that every thing might be the playner and more easye to attayne vnto, I haue at the latter ende of the foresayd fyrt booke, set the figures whiche represent suche matters as were entreated of in the booke before, and also haue thereto annexed a sufficient declaration and exposition by letters, of all partes and parcels conteyned in the sayde figures.

In the seconde booke we shall declare the divers sortes and maners of the deliueraunce or tes of the se-  
byth of mankynde, and all the daungers, perils, and other cases happening to the labouryng woman at that season, with remedyes and manyfolde medicines concerningy the same, where also we haue not omitted ne left out anye med-  
icine beyng fyrt in the olde booke, but haue in  
manye places rectified and amended the same,  
accordyng to reason and the lawes of phisick:  
and besides this, haue added thereto diuers o-  
ther salutarie and effectuall medicines, suche as  
eyther I my selfe or other Phisitions beyng yet  
alyue at this day, haue experimented and prac-  
tised. Furthermore, in this seconde booke ye may  
 finde diuers remedies whereby to prouoke the  
termes or flowres (when that needeth) or to re-  
strayne or stoppe the same when they issue more  
largely then nature doth require, with many  
other matters, to long here to be rehearsed.

In the thirde booke shalbe entreated, of the election and choyse, by certayne signes and to-

Many true-  
ly experi-  
mented me-  
dicines ad-  
ded to this  
booke.

Things  
entreated of  
in the thiro  
kens booke.

The prologie.

hens of a good Nurse, whiche maye foster and  
byng vp the chylde beyng borne. Item medi-  
cines increasyng, diminyshing, attenuatyng,  
engrossyng, and amendyng the mylke in the  
Nurses brestes. Also remedyes for manye and  
sundrye diseases, whiche oft tymes chaunce unto  
infantes after their byrth.

What is  
conteyned  
in þ fourth  
booke.

In the fourth and last booke, we wyll some-  
what commune of conception, with the causes  
hynderyng or fartherwyng the same, shewynge  
certayne counsayle and remedyes whereby by  
the grace of God the vnfruitefull maye be made  
more fruitefull, and impedimentes of concepti-  
on, by vertue of medicines, remoued and ouer-  
come, the woman beyng made the more apt to  
conceauie. And farther, in this last booke shall  
be vttered and sette foorth certayne embellesh-  
yng receptes, concernyng only honest & health-  
some decoration and clenlynesse, alwayes moste  
lowable and commendable in a woman, as to  
scoure and cleuse the head, to cause the heere to  
kepe his naturall colour, to preserue the heere  
from fallyng away, to take away heere from  
certayne places, where beyng it causeth some  
desormitie or unseemelynnesse in a person, to  
subtyle and cleare the skynne in the face or o-  
ther where, to remoue and do awaye spottes,  
frekens, and other suche lyke displeasaunt  
markes and tokens, to couple and mollifie the  
skynne beyng rugged and rough, with other  
moe suche lyke matters, to long here to be re-  
hearsed, the whiche truely are not of anye pru-  
dene

dent person to be reected, improued, or disprayed,  
sed, forasmuche as I teache nothyng in that  
place, but that only whiche may make to the ho-  
nest, comely, and commendable conseruynge and  
maynteynyng of the inset and naturall beautie  
in a woman, utterly abhorryst and defyng all  
fardynge, paintyng, and counterfaite cast colours,  
whiche of some damnable and misproude peo-  
ple be dayly vsed, such as by all meanes possi-  
ble seeke and searche more the abominable and  
deuillish paynting & garish setting foorth of their  
mortall carhases (the better thereby to commend  
it vnto the eyes of foolish & fonde men) then by  
honest, sober, debonayre, & gentle maners so to  
demeane their lyfe, that they may thereby rather  
obtayne the loue, amitie, and heartie perpetuall  
faour first of God, & then of all honest, discrete,  
and godly wyle men. Thus nowe to be shert, I  
haue in as compendious maner as the matter  
would suffer, set before your eyes the cheefe and  
principall contentes comprehended in this little The bene-  
volume. And now remayneth there nothyng els volencie of  
but onyl to require the beneuolent faour and the reader  
good acceptation of this my labour and paynes required.  
spent in the compiling of these forelayde mat-  
ters, praying, that as it hath ben to me payne-  
full in the composyng thereof, so it may be both  
pleasaunt and fruitlefull to all women (for whose  
sake & only respect it is set foorth) in the readyng  
thereof. Howbeit, I am not ignorant ne vnsure  
that many there are, before whose syght this  
booke shall finde small grace, and lesse faour.

**Harde to please man** So harde a thing it is to wryte or endite anye  
judgements matter whatsoeuer it be, that shoulde be able to  
sustayne and abyde the variable iudgement, and

to obtayne or winne the constant loue and a-  
louaunce of euerye man , especiallye ys it con-  
teyne in it any noueltie or unwont strangenes.

**The maner of Poets in tymes past.** Therefore the auncient Poetes in tymes passed,  
when that they enterprised anye new or straunge  
worke, were wont in the frunt of the same,

with greate protestation, to invocate and call  
vpon all the goddes and goddesses by name, re-  
quiring them fauourably to aspyre, ayde, and  
prosper theyr attempted purpose , to the ende  
that by theyr obteyned fauour , it myght be the  
more acceptable and gratiouse to all suche as  
shoulde it beholde and reade . Whose example  
ryght necessary and needefull it were that I here  
shoulde deuoutly ensue and folowe , so that I  
coulde first beleue that by suche maner of invoca-  
tion, myght be allured and wonne the bene-  
uolencie and wylling fauour of all suche in  
whose handes this present booke shoulde happen

**The diffi-  
cultie to con-  
cyle h good  
wyll of per-  
nert people.** to fall. But truely I do suppose, that although  
I shoulde call downe all the nine noble Muses  
out of the famous mount of Hellicon, or praye  
to be assistent the three louyng graces , or great  
Apollo , god , maister , and cheefe inuentour of  
the nature of all hearbes and other medicines:  
or Esculapius cheefe patron and president in  
the worthye science of Phisiche : or wittie Mer-  
curie with his doulce and sugred eloquencie,  
with sweete Suada,goddesse of all perswasion,  
with

with all other the goddes and goddesses what  
ever they be, in whom ingenious Poetes do  
faigne to be a maiestie, myght, and power, to  
encline the heartes of men for to delyte and take  
pleasure in any suche thyng whiche fyrt shalbe  
by their godhead alowed and faououred. Though  
(I say) all these shoulde firmelye conspyre in one  
together, and bende them vterly to the moste of  
theyr hygh puissance, to sacre, halowe, yea and  
with their holye poeticall spirite to breathe ouer  
this booke, yet shoulde there be founde people  
of so ingrate, straunge, peruers, and waywarde  
wittes, that woulde (without all good reason)  
blame and imroue the same bunteth yet seene,  
and muche lesse read. For who be they that geue  
so precipitat and headye iudgements in all ma-  
ner of matters, as suche (for the more parte) the  
whiche therein shall haue leaste cognissaunce  
or knowledge, and take least payne in reading  
or searchyng the veritie of that thyng agaynst  
the whiche they be moste stoute, doughtie, and  
bolde pronouncers. And this do I not say on-  
lye of them, that peraduenture shall here and  
there in the processe of this booke fynde any  
particular matters to reproue, and carpe, some-  
tymes worthylye, and sometymes otherwyse:  
but also, yea, and that muche more of them,  
whiche generally without all exception, shall  
condemne and vterlye reproue all the whole  
matter, some alleagynge that it is shame, and  
other some, that it is not meete ne lytting  
suche

The lyghte

Of them  
that vterly  
do cōdemns  
this booke.

suche matters to be entreated of, so playnelye in our mother and vulgare language, to the dis-  
honour (as they say) of womanhead, and the de-  
vision of their wont secretes, by the detection  
and discoueryng whereof, men it readyng or  
hearyng, shalbe moued thereby the more to ab-  
horre and lothe the compayne of women, and  
farther, in their communications to ieste and  
bourde of womens priuities, not wont to be  
knowen of them, with diuers other suche like  
cauillations and reasons: so that their opinion

*Ad regiam etiam amoremque suum quoniam te*  
it is, that it were more expedient and better to  
supprese and vterlye to condemne vnto darke-  
nesse for ever this booke, then to sende it foorth  
into lyght.

*Aunswere* to certayne  
cauillations.  
Loe, suche is the lyght iudgement  
of them, the which in euery thyng, whereof may  
ensue both good and euyll, haue alwayes theyr  
eyes walkyng and firmlye affixed and directed  
vpon the euyll, pyckyng and choosyng out the  
worst of euery matter, omitting and leauiyng  
to speake of the beste, as the thyng whiche were  
nothyng to their purpose. If euerye thyng in  
this worlde shoulde be wayed and passed vpon  
after this sort, then shoulde we be fayne to con-  
demne and bannishe those thynges farre from  
vs, whiche are at this tyme accompted and ta-  
ken for the most necessarie, worthie, and of grea-  
test price or estimation. For to be short, there is  
nothyng vnder heauen so good, but that it maye  
be peruerted and turned to an euyll use, by  
them that be euyll and naught them selues,

*Pothing so* good but it  
may be adu-  
sed.  
and.

# The prologue.

and do abuse it: ne is there any thyng so absolute and perfecte, but by the occasion of the abuse thereof, at one tyme or other, may and doth ensue great daunger and damage to mankynde. Fyre & wa-  
ters to the vse of man, without the whiche we ter abused.  
coulde not lyue: yet by the meanes of them,  
many a miserable deede hath ben done, and per-  
petrated. By fyre hath ben consumed and de-  
uoured whole Cities and Countreyss. By wa-  
ter, swallowed and drowned infinite men, ship-  
pes, yea and whole regions. Agayne, meate  
and drynke, to the moderate vsers thereof, doth  
minister and mayntayne lyfe: And contrary, to  
the unmeasurable and unsaciatioun gourmauntes  
and gluttons, it hath full many thousand times  
brought surfettes, sicknesse, and at the laste  
death. By weapons, Realmes and Cities be  
defended from the iniurie and violencie of theyr  
fierce enemies, the true wayfaryng man from  
the assault of the theefe: Yea and many tymes  
cleane contrary, by weapons Realmes and Ci-  
ties be subuerted and vitterlye destroyed, the  
true mans throte by the theefe cutte. The most The Bible  
holye and sacred Byble teacheth nothyng but abused.  
holynesse and vertuous lyuyng, charitie to God  
and to our neyghbour, reformation of our  
wicked lyuyng, and breefelye, the hye waye  
to GOD. The blessed Sacrament of the al-  
ter was instituted and ordeyned by our Sau-  
our Jesus Christ, for a principall, earnest,  
lyuely, and moste presente consolation and  
comfort

ed.

# The prologue.

and comfort of mans conscience; yet both holye Scripture, and also the forelayde holye Sacrament, haue ben, be, and wyll be, the confusion and condemnation of a greate number of the abusers and indigne or vnworthy receauers of them both. Shoulde men, for the auoydying all these forelayde inconueniences, and for the reasons abouesayde, condemne and bannyngh syre and water, forlase their meate and drynke, suppresse and forbyd all maner of weapons, abolishe and set asyde the holye Scripture, denye or vnregarde the blessed Sacrament? No, it were but madnesse once to thinke it. Therefore I say, the iudgement of that eye can never be egall and indifferent, whiche hath more respect and regarde alwayes to the displeasures and hurtes possible to happen (onlye through the misuse of a thyng) then to the emolumentes and profites daylye and commonlye lyke to ensue to the wel vvers of the same, that that of it selfe is good, is never to be disallowed for the sake of them that do abuse it. For as the Apostle also doeth testifie: To them that be good them selfe, euery thyng turneth to good, what euer it be is to them a sufficient matter and occasion therein to seeke the glorie of God, and the onlye profit of theyz enen Christen. And contrary, such as be of yll disposition, in euerye thyng (be it never so good and salutarie) picketh out matter of maynteynaunce to theyz lewdenesse, turning matters of sadnessse and discretion, to foolyshe and pyryshe prating contention.

Wherfore

Wherfore consydering that there is nothyng in  
 this worlde so necessary, ne so good, holye, or ver-  
 tuous, but that it maye by wickednesse be abu-  
 sed , it shalbe no great wonder though this li-  
 tle booke also, made, written, and set foorth for a  
 good purpose , yet by lyght and lewde persons  
 be vsed contrary to godlynesse, honestie, or then-  
 tent of the wyter thereof . The abusyon of this <sup>Wherein</sup> booke (in my simple iudgement) consisteth on-  
 lye in these two poyntes. The one is, least that may be a-  
 some yll disposed person shoulde wickedly abuse <sup>this booke</sup> bused.  
 suche medicines as be here declared for a good  
 purpose , to some deuyllishe and lewde vse. What  
 I meane by the lewde vse of them , they that  
 haue vnderstandingyng, ryght soone wyll perceave.  
 The seconde poynt is, least that this booke hap- <sup>The second</sup>  
 penyng into any lyght marchauntes handes, poynt.  
 shoulde minister matters vnto suche , to deuyse  
 of these thynges at vnsit and vnseemely tymes,  
 to the derision or ashaming of suche women as  
 shoulde be in presence. ac. To these reasonis can I  
 make no better awnswere , then hath ben alled-  
 ged before . Notwithstandingyng, yet I say that I <sup>No light</sup>  
 trust, yea, and do not doubt, but that this booke  
 shall be so discretely diuided abrode , that none  
 of them shall fall in any suche persons handling.

Agayne, ys any do chaunce to them , I am  
 sure they wyll as soone reade this Prologue,  
 as the rest of this booke , the which thing when  
 they shall do, here shall they heare of me , that  
 they be in theyr doynges neyther honest, good,  
 ne godly, but speakyng vniuerently , contemp-  
 tuously,

persons hal  
 haue any of  
 these bokes.

Of foolishe  
and lewde  
talkers.

tuously and vntymely of liche thinges , they do  
great iniurie , dishonour , and contumelye to na-  
ture : For he that declareth anye thyng in man  
or woman , priuie or apart , talkyng and rehear-  
sing it in reproche , derision , or confusyon of his  
euen Christen , can not be excused of mortall  
and deadly sinne , for so muche as contumel-  
iously he ashameþ and confoundeth his euen  
Christen , wherewith he bryngeth hym out of  
pacience , mouyng hym to yre , and vengeaunce ,  
in rehearsyng of liche thinges , and after liche  
sorte , as he knoweth shoulde agreeue and bere  
his mynde : wherfore for liche deedes , he shal  
not be accounted of the number of honeste and  
sage persons , but of the lyght and lewde . Yet  
another sorte is there , whiche woulde that ney-  
ther honeste ne vnhoneste men shoulde see this  
ooke , for because (as they saye) be a man never  
so honest , yet by readyng heare of thinges to them  
before vñknowen , they shall conceaue a cer-  
taine lothsonnes and abhorring towardes a  
woman . To these I aimswere , that I knowe  
nothyng in woman so priuie ne so secrete , that  
they shoulde neede to care who knewe of it , ney-  
ther is there any part in woman more to be ab-  
horred , then in man . And yf the knowledge of  
liche thynges whiche commonlye be called the  
womans priuities , shoulde diminishe the hear-  
tie loue and estimation of a woman in the  
minde of man , then by this reason , Phisitians  
and Chyrurgians wyues shoulde greatly be ab-  
horred and misbeloued of their husbandes . And I  
my

# The prologue.

my selfe lykewyse, whiche wryteth this booke,  
shoulde maruaylouslye aboue manye other ab-  
horre or lothe women. But to be short, there  
is no suche thyng, neither any cause thereto why.  
Wherfore all suche slender reasons set apart, let <sup>No matter</sup> no woman be greeued who shall see or beholde <sup>who reade</sup> this booke: for yf the partie be lewde, vnhappy this booke.  
and knauishe that shall reade it, here I am sure  
he shall learne neither lewdenes, vnhappynes,  
ne knauerye. Howbeit, generally to all men, in  
whose handes this booke shall chaunce to come,  
I counsayle and exhorte, that they take not vp-  
pon them to talkie of any thynges therein con-  
tayned, but onlye where it may edifie, and be readers.  
<sup>Therhorta-</sup>  
assuredly well accepted.

For women lightly wyll not gladlye heare of  
suche matters, by anye man unlesse it be a Phi-  
sition of whom they require counsayle, or of  
theyr discrete husbandes. It shall be no dis-  
pleasure to anye honeste and louyng woman,  
that her husbande shoulde reade suche thynges:  
for manye men there be of so gentle and louyng  
nature towarde their wyues, that they wyll be  
more diligent and carefull to reade or seeke  
out anye thyng that shoulde do theyr wyues  
good, being in that case, then the women them  
selues. Briefly, I require all readers hereof, to  
interpretate and consture euerye thyng herein  
contayned, accordyng to the beste, and to vse  
euerye thyng herein entreated of, to the pur-  
pose wherfore it was wrytten. For truelye as

# The prologue.

The consyderation why this booke was set foorth. for my part consydering the manyfolde, daylye, and imminent daungers and perilles the whiche all maner of women of what estate or degree so ever they be , in their labours do sustayne and abyde, yea, many times with peryll of theyr lyfe (of the whiche there be to many examples needelesse here to be rehearsed ) I thought it shoulde be a verye charitable and laudable deede , and ryght thankfully to be accepted of all honourable and other honest matrones , ys by my paynes this little treatise were made to speake

This booke set foorth in many other languages. Englyshe , as it hath ben long syth taught to speake Dutche , Frenche, Spanyshe, and dyuers other languages . In the whiche countreys there be fewe women that can reade , but they wyll haue one of these bookes alwayes in readynes, where also this and other suche bookes be as commonly solde at euerye Stacionars shop, as anye other booke. The same commoditie then and profite whiche they in their regions do obtayne by enjoying of this little booke in theyr maternall language , may also ensue vnto all women in this noble Realme of Englande, it beyng lykewyse sette foorth in our Englyshe speache , so that to them whiche diligently wyll aduert and geue heede to the instructions of this little booke , it may supplie the roome and place of a good midwyse , and aduyse them many tymes of sundrye cases, chaunces, and reme-dyes , wherein peraduenture ryght wyse wo-men and good midwyses shalbe fullignoraunt.

And

# The prologue.

And truely (as I haue ben credibly ensoumed  
by divers persons worthye to be beleued) there  
be syth the first settynge foorth of this booke, right  
many honourable Ladies, and other worshipful  
Gentylwomen, whiche haue not disdayned the  
ostener by the occasion of this booke, to fre-  
quent and haunt women in theyr labours, ca-  
ryng with them this booke in theyr handes,  
and causyng liche part of it as doth cheefely con-  
cerne the sanie purpose, to be read before the  
Mydwylfe, and the reste of the women then be-  
yng present, whereby oft tymes, then all haue  
ben put in remembraunce of that, wherewith  
the labouryng woman hath ben greatlye com-  
forted, and alleuiated of her thonges and tra-  
uayle : Whose laudable example and doynges,  
woulde GOD that many proude Mydwylfes Of Myd-  
wyues.  
woulde ensue and folowe, among the whiche,  
as there be many ryght expert, diligent, wyle,  
circumspect and tender about liche businesse as  
apperteyneth to theyr office : So be there a-  
gayne many mo full vndiscrete, vreasonable,  
chorlishe, and farre to seeke in liche thynges, the  
whiche shoulde cheefely helpe and succoure the  
women in theyr moste paynesfull laboure and  
thonges, through whose rudenesse and rash-  
nesse onlye, I doubt not but that a great num-  
ber of women in theyr labour speede worse then  
needed otherwyse. But here nowe let not the In euerye  
good Mydwylfes be offendid with that, that is  
spoken of the badde. For verly there is no sci-  
ence, but that it hath his Apes, Owles, Beres,  
science ther  
be of all soy-  
tes.

# The prologue.

and Asses, whiche as aboue all other haue most  
neede of information and teaching, so most com-  
monly agayne, more then any other, wyll they  
kyche and wynce agaynst suche as woulde them  
resourne or reduce to any better way then they  
haue ben accustomed to in tymes past. And this  
do I say, for because that at the fyrt commyng  
abroade of this present booke, many of this sort  
of Wydwyses, moued eyther of envie, or els of  
mallice, or both, diligent and endeououred  
them very earnestly, by all wayes possible, to  
fynde the meanes to supprese and abrogate the  
same, makyng all women of theyr acquain-  
taunce (whom they thought to haue any know-  
ledge thereof) to beleue that it was nothyng  
worth, and that it shoulde be a slauder to wo-  
men, forsomuche as therein was descried and  
set foorth the secretees and priuities of women,  
and that euerye boye and knaue hadde of these  
bookes, reading them as openly as the tales of  
Robin hood. &c. The whiche sayinges, as they  
were false, and vntrue, and malitious allegati-  
ons onlye of euyll hearted persons, to whom it  
was great greefe, that any by readyng thereof,  
shoulde see or understande more then they hadde  
knowledge of before: So is it very soothe and  
true, that ryght dyuers of the better and more  
sober sort, were thereof full fayne and glad, and  
verye desyrous to haue of them, and gaue  
saythfull counsell also vnto women of theyr  
familiere knowledge, to heare the booke read by  
some other, or els (suche as coulde) to reade it  
them

Some Mid-

# The prologue.

them selues. whose honest and vertuous indu-  
stry in that behalfe, as it doth merite and de-  
serue the laude and prayse of all them that be  
laudable them selfe: euen so is the sylthye and  
vyle ingratitude and dispituous enuye of the  
maleuolent, to be detested and vterlye abhorred  
of all people: whose malignaunt wittes, yf  
they myght preuyale of theyz purpose, woulde  
sley the good courages of all honest interpri-  
ters, in those matters and all other. And  
thus I conclude and make an ende  
of this rude Prologue, requi-  
ring the gentle readers  
therof, that yf they  
shall fynde any  
thing ther-  
in inter-  
pretable to diuers senses, to ac-  
cept only that whiche may  
make to the best, accor-  
dyng to my mea-  
nyng.

The first booke.

C In this first Chapter is bresely  
declared the contentes of the  
first booke.

The utilite  
of the first  
booke.

The con-  
tentes of  
this booke.

Although that many thin-  
ges entreated of in this  
first booke, shal seeme vnto  
some not very necessary to  
the understandyng of the  
seconde booke, yet then contrary do I  
ensure and certifie (as I haue suffici-  
ently sayd in the Prologue) that the ig-  
norauant in the first, shalbe full blynde  
in the seconde, to the whiche, the first is  
as a key, opening and clearing the mat-  
ters to be intreated of in the seconde.

In this first booke then shalbe decla-  
red the fourme, maner, and situation of  
the inwarde partes of a Woman, such  
as are in them by nature dedicate and  
assigned to the propogation, concep-  
tion, and bearyng of mankynde. In whō  
truely is the receptacle, & as ye woulde  
say, the campe or feelde of mankynde to  
be engendred therein. And although  
that

that man be as principall mouer and cause of the generation: yet (no displeasure to men) the woman doth conferre and contribute muche more, what to the encreasement of the chylde in her wombe, and what to the nouryshment thereof after the byrth, then doth the man. And doubtlesse, yf a man woulde demaunde to whom the chylde oweþ most his generation: We may worthyly make aunswere, that to the mother, whether ye regarde the paynes in bearing, other els the conference of moste matter in begettyng.

The woma  
conferreth  
more the ge-  
neratio then  
man.

Furthermore, in this booke ye shall  
reade certaine thinges, which in tymes  
passed haue ben corruptly, negligently,  
yea and very falsely written of, and of  
the whiche both men, yea and women  
them selues, haue conceaued very erro-  
nious and misopinions, as ye shall far-  
ther perceave in the processe.

Many tings  
falsly writte  
in times  
past.

Nowe therefore that we come to the  
declaration of the Organs generative  
in woman, it shalbe necessary to the bet-

# The first Booke.

fer vnderstandingyng thereof, fyrlste to shewe the discription of certayne thynges, Without Whose knowledge, this treatyse Woulde be manye tymes the more obscure and darke.

**C**In holwe many coates the body  
is lapped or inuolued. Cap.ii.

The principlall coates  
of the body.

He body of man or Womā is inuolued or compassed uniuersally with three principall coates. Of the whiche, the first and vttermost is called

the skinne, in Latine Cutis, With whom generally every part of the body is clad and inclosed, the whiche yet in some part is more softe, delicate, and thinn, then in some other, and in some one person more stowre & styffe, then in some other agayne, for causes needelesse here to be rehearsed.

And ye shall note, that vpon the outward face and superficie of this skinne, there is yet another thinner skynne, in Latine

The super-  
ficial skinne

Latine commonly named Cuticula, & of  
some Efflorescentia cutis. This thinne skin  
is it, the which ye see ryse lyke a bladder  
when any part of the bodye is blistered  
with fyre or hot Water, so that betwene  
this thinne skin and the very skinne, is  
conteined the Water which resorzeteth to  
the place by the violence of the fyre or  
heat, the which thin skin also we vse to  
pricke to let the Water issue foorth: also  
the same that skaileth or pylleth of the  
hands or other partes of the body being  
scabbed & begynnyng to drye. Item the  
skin that the Adders do cast in the som-  
mer time, is the foresaid thin superfici-  
all skin, & not the verye substanciall skyn  
of the body in dede. For the verye skyn  
neuer pylleth ne falleth of but by great  
violēce, as by slaying, lyke as beastes be  
slayne at the butchers, & as they slay co-  
nies. And againe, the thin or superficiall  
skin, skaile it or fal it of neuer so often, yet  
in the place of it is reingendred new; as  
good alwayes as the former. But if  
the second and very skin be perished, by

The verye  
skin skaileth  
not of.

The verye cuttyng or apostumation, or by other  
skin peri- casuallie, it wyl never be restored to his  
shed , never  
restored. olde perfection agayne, but shall shewe  
alwayes in the place where it is, as it  
were a seame, skarre, or marke, smoothe  
and harder then the other skynne, and  
Without naturall powres.

The seconde  
coate.

The fleshye  
skynne.

The seconde inuestiture or clothyng  
of the body, is named the fleshye skin, in  
Latin Membrana carnosa, so called, for be-  
cause that it conteyneth and is compas-  
sed of fleshynes, then any other kell or  
skin in all the bodie, & is, as it were, the  
lynyng to the forelaide Cutis, that is the  
veryskin immediatly aboue hym, the  
very skin and it beyng both basted toge-  
ther, by a great number of small fybres  
or cordes enterlasing these two skinnes,  
so that with great payne vnneth may  
they be separated the one frō the other.  
And farther, betwene these two skins  
runne a great number of baynes, ar-  
tires, and skinnes, in euery part of the  
body, so that the great baynes whiche  
appeare so manyfestly to your syght in  
the

the armes, temples, handes, legges,  
feete, and other places, runne betweene  
the proper skinne and the fleshy skinne,  
this beyng to them as a bedde, and that  
as a couerlet.

The thirde coate of the bodye, is the  
fatte, in Latine Adeps, the which doeth  
so generally in euery parte of the bodye  
inuolue and wrappe the same as the o-  
ther two coates: but yet the man or Wo-  
man beyng in any reasonable lykyng, it  
is founde in every part(except feewe) as  
the forehead, the temples, the backes of  
the handes and feete, With certayne o-  
ther places needelesse here to be resited,  
and doth entercurre and run betweene  
the two foresayde skinnes, receauyng &  
embrasyng in it selfe the small bastynge  
fibres, the vaines, artires, and sinnues,  
which (as I sayd before) be derived fro  
the one skin to the other: And the grea-  
ter soylon of fat that there is betweene  
the two skinnes, the lesse be the vayne  
intercuring betweene them, conspicu-  
ous or sensible to the eye (thabundance  
of

store of fat  
letteth the  
shewe of the  
vaynes,

of fat drownyng & coueryng the greatness of them) the which also in the selfe same place of a leaner or sparer person, shalbe seene very great, and as it were swollen baynes, in comparison of the fatter. Item, vnderstande ye that in some part of the body, naturally fatnes doth abound much more then in other some, as in the belly lyghtly the fatte is two fingers thicke & more: and in women that be meanely fat, in the thydes & buckokes this fatte is of three, yea four syngers thicnes, whiche (as I sayde above) alwayes hath his place betweene the foresayde two skynnes.

What is  
contayned  
next vnder  
the fleshy  
skynne.

Nowe immediatlye vnder the fleshy skyn, be contayned the Muskles of the body, so that the inner face or superficie of the fleshy skin, wherwith it toucheth the Muskles, is alwayes bedewed with a certayne slymye moysture, by whiche meanes the foresayde Muskles mouing and styrryng vnder the said fleshy skyn, be the freer, & haue the lesse impediment or let in theyr motion, & verye easie it is

to

The first booke. Fol. iii.  
to separate this skin from the Muskles.

Here is declared what the  
Muskles be. Cap. iii.

The Muskles of mans body  
be called the mouyng cor-  
des and fleshye strynges,  
whereby any member of  
the bodye is mooued to or  
fro, vpparde or downeward, or turned  
rounde. As for example. If ye close, or  
otherwyse do moue either of your han-  
des, and in closyng or mouyng it with  
the other hande do feele the wreste of  
that hande, ye shall sensibly perceave  
as it were certayne cordes mouyng vn-  
der the skinne, the whiche be called  
Muskles, in Latin Musculi. To discusse  
curiously the nature or occasion of the  
name of Muskles, is not for this place.  
Here it is sufficient to understand what  
is meant by the name. Yet note ye  
well, that wheresoever there is great  
store of Muskles, and cheefely in the  
myddle parte of them, there is al-  
so greate plentie of fleshe, enter-  
larding

What is  
meant by  
the name of  
Muskles,

# The first booke.

The Mus- lardynge & entermynglyng it selfe with  
kles enter- the Muskles, & as it were conbyndyng,  
mingled with fleshe. colligatyng, or knytyng together the  
Muskles, not so yet, but that neverthe-  
lesse they haue theyr free motion.

All other places of the bodye leste a-  
part and vniuentioned of, here wyll I  
onlye declare a litle of the Muskles of  
the belly, for somuch as theyr operation  
is sometymes conferent and appertey-  
nyng to the matters that we entend of.

The Mus-  
kles of the  
belly.

Ouer the amplitude of the bellye,  
next vnder the fleshy kell or skyn, be .iii.  
Muskles, eche situate and sette vnder o-  
ther, of the whiche, the uppermost im-  
mediately touchyng the fleshy skyn, be  
called the Wyaswyse descendyng Mus-  
kles, in Latin Musculi obliqui descendentes.  
Of these Muskles there be two, in eche  
syde of the belly one, so that these two  
Wyaswyse descendyng Muskles mee-  
together in the middle region of the bel-  
lie, and be extended or spread ouer al the  
amplitude of the belly, shapyng thereto  
as it were another coate.

The

The seconde Muskles be named the byaswyse ascendyng Muskles, in Latin, Musculi obliqui ascendentes, whose being is immediatly next vnder the inner face of the first Muskles. Of these also as of the firste, in eche syde or coaste of the belly is there one.

The third sort of the belly Muskles, as they be situate in order, the one vnder the other, be called the ryght Muskles, in Latin, Musculi recti, which be double as the other two before.

The fourth be nominated the ouer-thwart Muskles, in Latin, Musculi transuersi, because they transuerse or ouer-thwart the belly. In eche side likewise of whom, ther is one of these Muskles, which in the middle lyne of the belly encouentre eche other, as I haue sayde of the aboue named three Muskles, so that the byaswyse ascendyng, and the byaswyse descendyng with the ouer-thwart Muskles, do eche of them couer and compasse all the whole breadth of the bellye, but so do not the ryght Muskles,

## The fift booke.

The use of  
the fourre  
belly Mus-  
kles.

kles, for the breadth of them is but small in comparison of the other. All these fourre Muskles be to the entrayles and bowels within the belly, as fourre severall coates, by the vertue and helpe of whom, together with the ayde of the midriffe, all expulsion both upward and downewarde in the guttes, in the stomacke, in the matrix of the woman in the tyme of labour, and also in the bladder in tyme of makyng of water, is wrought, and yet besydes this utiltie, they clothe (as I haue sayde) defende, fortifie, and strength the inwar- des of the bellye.

### C Of the Bell, called Peritoneum.

Capit.iii.

The Peri-  
toneum and  
his office.

**V**nder the laste Muscle of the belly, called the ouerthwarte Muscle, immediatlye succee- deth a certaine thin rime, bell, or skin, named in Latin, Peritoneum, whis- che compasseth rounde the amplitude and

and largeour of the bellye, takyng his  
originall at the bynders of the loyne  
bones, and from thence dilatyng and  
spreading it selfe abroade, vnderlyneth  
the ouerthwart Muskles, the midriffe,  
& part of the short ribbes. To be shart,  
this rime vnderlineth all the whole ca-  
vite, holonesse, or amplitude of the bel-  
lye, from the midriffe to the flankes by  
share, immediatly contaynyng and in-  
volving in it selfe all the whole conten-  
tes of the belly, euен as the skin next un-  
der the shell of an egge enuironeth and  
compasseth immediatly all the contay-  
ned meate of an egge. And as for Perito-  
neum, doth not onlye involue all the en-  
trayles of the belly in his compasse, but  
also yeeldeth unto eche entrayle a coate  
and webbe of the cloth of his owne bo-  
die, by the which his liuery, they be the  
more aretly & strayghtly affixed or faste-  
ned unto him selfe, and farther in them  
selues the stronger within the cavite  
of the belly: and vnder this Peritoneum, be  
contayned these bowels folowyng.

The use &  
profit of the  
Peritone-  
um.

First

# The first booke.

Bowles co. First the stomacke, which is the first  
tayned in receptacle and receauer of the foode or  
meate chawed and mashed before in  
the mouth, from thence descending  
over the Winde pype, downe along the  
stomacke gut, and so consequently into  
the stomacke, then the Bell, in Latin  
Omentum, the luer, the splene or melt, the  
bladder, and the matrix, then yet the  
guttes, vnder the guttes the kydnees,  
the maister bayne, and the maister ar-  
tire. But here we shal begyn fyrt to en-  
treate of the matrix, as the part which  
maketh cheefely to our purpose.

## C The declaration of the names and nature of the Matrix.

Capit. v.

Dyuers  
names of  
the Matrix.

**E**re ye shall vnderstande, that  
these thre wordes, the Matrix,  
the Mother, and the Wombe,  
do signifie but one thing, that  
is to say, The place wherein the seede  
of man is conceaued, setified, conserued,  
nourished, & augmented, vnto the tyme  
of

delinerance, in Latine, named vterus  
& Matrix. The necke of this Wombe, o-  
therwyse called the Womans priuie,  
we wyll call the Wombe passage, or the  
priuie passage, in Latin Ceruex vteri, & pu-  
dendum muliebre, the extreme end, or þ first  
entraunce of this priuie or Wombe pas-  
sage, ye shall name the passage port, for  
because that it is the port gate, or en-  
traunce of that passage, or way into the  
Wombe or matrix, in Latin, Vulua, i. vulua.

The Wombe passage then or the necke  
of the Wombe, taketh his beginning at  
the passage port, and from thence sti-  
eth and mounteth ryght upwarde un-  
der the sharebone lyke a great conduct,  
varying in length & breadth according  
to the age of the woman.

To make especiall mention of the  
length of this Wombe passage, were but  
follie, for the diversite thereof. Not-  
withstandyng in women it is esteemed  
of the length of. x. xi. xii. or xiii. fingers  
brede, some more, some lesse. And this  
we may say, that nature hath so prouis-

The necke  
of the Pa-  
trix.

Length Comon yarde 8. or  
9. inches. English Treasur

p. 52.

*The next booke.*  
ded that it is of sufficient length, to i-  
ceane the priuie part of man, in the g-  
eneration, directing the same towardes  
the Wombe porke, throught the Whiche  
the sede is naturally sent from the man  
into the Wombe or mother, thereto hel-  
ping an attractive power, Whiche is in-  
set and geuen to the Wombe, to attract  
and drawe towardes it selfe the seede  
parted from the man (so that there be  
no other let.)

## C Of the Wombe and his partes. Cap. vi.

**A**ly head or vpper ende of  
this Wombe passage, is si-  
tuate the Wombe it selfe,  
Whiche in Woman beyng  
not with childe is very lit-  
tle, contract and drawen together, so  
that the amplitude or largenes thereof,  
pasleth not the amplitude and largenes  
of the priuie passage, the Whiche thyng  
to some may seeme vncredible, yet by  
Anathomie ye maye see it to be true.

The womb  
or matric in  
women not  
with chylde  
contracted.

And

And for all this contraction or drawing so nere together of the matrix , the outsyde of it is very smothe, moyst, glisterynge , and reddishe , as it were a little redde tempered with a great deale of whyte , the insyde also of the matrix is smothe : yea , and though that the matrix (as we haue said) be full of riuels or wrinckles, by there reason that it is so contract, from a great amplitude or largenes (as may be seene in the Wombe or matrix of Women with chylde ) to this little compasse , yet maye a body scarce perceave in this inner side any wrinkle, (albeit that there be infinite ) they be so finely and nere drawen together.

This contraction of the matrix , no doubt was made by nature , for these causes, partlye that at such tyme that the Woman is not with chylde, it shold occupie the lesse roome in the belly, but cheefely that in tyme of conception of the seede , the little bolke or quantitie of the sayde seede , at his first conceauyng into the Womans mother , may

The cause  
of the con-  
traction of  
the matrix.

Dij be

# The first booke.

be touched rounde about every where  
of the mother , and as ye woulde saye,  
amplexed or embrased , and contayned  
(as the nut shell contayneth immediat-  
lye the nut) of the inner walles or face  
of the matrix , and as the seede is viuis-  
ed , shaped , and doth encrease , so doth  
the amplitude of the matrix enlarge  
and waxe bygger , so that at the laste,  
when the infant commeth to his full  
groweth , or when the woman is great  
with chylde , then this coate or kell of  
the matrix is as thinne as a bladder ,  
where that in tyme of his contraction ,  
or when the woman is not with childe ,  
the coate or wall of the matrix is as  
good as halfe an inch thick .

Howe the  
matrix va-  
rieth y thick-  
nes & thin-  
nes of his  
coate .

The founde  
of the Ma-  
trix .

Nowe ye shall vnderstande , that the  
founde or bottome of the matrix is not  
perfectly rounde bowlyse , but rather  
lyke the forme of a mans heart , as it is  
paynted , sauing that the partition or  
clifte in the matrix betweene both cor-  
ners , the ryght and the lefste , is not so  
profoundlye dented inwardes as the  
clifte

clyste in the hearte : For in the inward vault , cavitie , or holonesse of the matrix , there is a certayne seame , whiche begynnyng in the middle of the forepart of the matrix , at the Wombe port , doth passe forth by that foresyde , & so by the bottome to the hynder syde of the matrix , & from thence along downe to the Wombe port on the backsyde , as ye may more evidently see in the figure hereof . This seame then is as it were a little separation , marke , or limitie , diuidyng the Wombe in two equall partes or sydes , the ryght and the lefte . Notwithstanding , in the matrix there is but one vault , cavitie , holonesse , or amplitude , the foresayde seame beyng but as it were a note , signe , or scarre sensible marke running along the sides and bottome of the Wombe . But this seame or line where it passeth the bottome of the mother or Wombe , is more crasse , thicke , and fleshlye , propendyng hel- dyng , hangyng or lokyng downeward into the vaulte or amplitude of the

A certayne  
seame deu-  
dyng the

two partes.

In the Ma-  
trix but one  
holonesse.

D iii. Wombe.

## The first booke.

Wombe, the whiche line in the sides is  
nothyng so manifeste ne sensible to be  
perceaued. Thus ye may see, that the  
myddle part of the bottome of the Ma-  
trix, is not so hye as the two corners or  
angles on both sydes be. Other distinc-  
tions or seperations in the matrix is  
there none, albeit that in tymes passed,  
divers Clarkes haue written, & many  
other haue beleued, that there shoulde  
be seuen selles, or seuen distinct places in  
the matrix, in three of the which on the  
ryght side, shoulde onlye men chyldren  
be conceaued, and in the other three on  
the left syde women chyldren, and yf it  
chaunced that the seede were conceiued  
in the seventh sell, which was the myd-  
delmoste, then that shoulde become a  
monster, halfe a man & halfe a woman.  
The which al is but lyes, dreames, and  
fonde fantasies. For the Womans ma-  
trix, as I haue sayd, is euuen as a strong  
bladder, having in it but one vniuersall  
holonesse, and the chylde when it lyeth  
in it, lyeth euer on the one syde more  
then

Certayne  
erronious  
opinions of  
vii. selles in  
the wombe.

then on the other , the head beyng to-  
wardes one of the corners or angles, &  
not vpright toward the middle bridge.

Of the mother port. Cap. vi.

He enteaunce  
of þ matrix or  
Womb, is na-  
med þ Womb  
porte or mo-  
ther port, the  
which in sub-  
staunce & fas-  
sion , muche  
doeth reſeble

Of the mo-  
ther porþe, &  
the situatio  
thereof.

þ fourme of an hankes bel, or other little  
morys bels, sauing that it is much byg-  
ger, hauing a clift ouerthwart the body  
therof, as ye may more plainly perceiue  
by þ figure hereof. And this port of the  
matrix is of substance more thicke and  
crasse then the rest of the same , & as it  
were a kernell rounde & clift in the mid-  
dest. This Womb port also is fastened &  
affixed to the vpper ende of the wombe  
passage, as all the rest of the wombe is.

D iiiij How-

The first booke.

Howe be it , the middle parte of the  
Wombe port or the snowt therof, where  
it bosome downeward, doth touche no  
side nor part of the Wombe passage , but  
onlye heldeth pendande wyse, or loketh  
downewarde : and where as at suche  
tyme that the man compayneth with  
the woman, the primie passage is dilat-  
ed & opened to the quantitie of mans  
privie part , yet notwithstandingyng, the  
mouth of the clift of the Wombe port is  
not moued thereby ne dilated : excepte  
that it be at suche tyme that the matrix  
beyng apt and disposed thereto , and  
other condicions requisite, this Wombe  
port do naturallye open it selfe , attrac-  
tyng , drawyng , and sucking into the  
Wombe the seede , by a vehement and  
naturall desyre.

The womb  
wel disposed  
naturally  
attracteth  
the seede.

Notwithstandingyng, When the seede is  
conceaued in at this Wombe port, it doth  
not alwayes remayne there, but manye  
tymes issueth out agayne for some in-  
disposition founde other in the place or  
in the seede it self. Albeit yf the seede be  
retay-

retayned styll in the matrix, then doeth  
the Wombe port close it selfe so fast and  
so firmely , that the poynt of a nedle can  
not enter in therat without violence,  
and so doth remayne vntyll the tyme of  
delineraunce , at what tyme agayne it  
viliteth and openeth it self , in such am-  
plitude and largenesse , that it is Won-  
derfull to speake of.

The close-  
nes of the  
matrix after  
the seede  
conceaued,

### C Of the vessels of seede, called the stones, with other therto appertayning.

Cap.viii.

**O**f eche syde of the matrix  
lieth a stone, which both be  
called the Womans stones,  
wherein is engendred the  
seede & sparne that com-  
meth from the Woman, not so stronge,  
firme , and mightie in operation as the  
seede of man, but rather weake, fluy,  
colde, and moyste, and of no great fir-  
mitie : howbeit , as conuenient and  
proper for the purpose for the whiche it  
was ordeyned, as the seede of man for

his

# The first booke.

his purpose. These stones be nothing so bygge as the stones of man, but lesse, flatter, much fassyoned after the shape of a great and brode almond. The substance and bodye of these stones is not made massyfe, or compact and softe as mens stones be, but as it were many little kernelles sette together, betweene the which is much holonesse, and therin conteyned a certayne thinne watery substance. This substance of the stones is inuolued & wrapped with a coate or thinne skinne, very firmlye annered to the foresayde substance, whiche also doth receane into hym selfe the seede bryngers. We may name the same coate in Latine Supergeminalis.

## Of the seede bryngers. Cap. ix.

Of the seede  
bryngers.

He seede bringers, called in Latin Vasa semē adferentia, be two baynes & two artires, whiche come to these two stones, to eche one bayne and one artire, and take theyr begynnyng

nyng on this Wyse.

Under the guttes (as ye may see in  
the figures hereof) be situate the greate  
maister bayne, in Latin Cava vena, and  
the great artire, Arteria magna. The mai-  
ster bayne hath his originall of the ly-  
uer, from whence it descendeth downe-  
warde along the loynes, vntyll it at-  
tayne vnto the begynnyng of Os sacrum,  
Where the artire (as the Worthyer) be-  
gynneth to mount vpon the maister  
bayne, and in this place they both di-  
uide them selues in two partes forke-  
Wyse, the ryght part of the forke pro-  
ceedyng into the ryght thygh & legge,  
the lefte, into the left legge, the bayne  
evermore associate with the artire, the  
which hath his beginning of the heart,  
from whence he is descended throughe  
the mydryffe to this place, distribu-  
tyng to all places whereby he passeth  
artires.

The office of the greate bayne is, to  
conduct and cary from the luyer (which  
is the blood shoppes, where the blood is  
engendred

The origin-  
nall of the  
great bayne

The office  
of the baynes

## The first booke.

engendred) to all partes of the bodye  
blood, therewith to noryshe them. For  
to the greate bayne wher they passe,  
there commeth innumerable smal bai-  
nes on every syde, even as to the great  
ryuers many small stremes on everye  
syde do resort.

The office  
of the arti-  
cles.

The office of the artires is, to spreade  
abrode in the body the vitall and lyue-  
lye sprite, engendred in the bosome of  
the hearte, and to refreshe and temper  
the immoderate heate whiche other-  
wyse mought be engendred in the bo-  
dye, the whiche also sleepe we or wake  
we, do continuallye moue and beate,  
therefore the motion of them is called  
the pulce, and loke after what maner  
the heart (which is the well of these ar-  
tires) doeth moue or stirre it selfe, and  
even so do they.

The heart  
and artires  
haue two  
contrary  
motions.

The heart then and the artires tho-  
row him haue two contrary motions:  
one is, in closyng it selfe, and the other,  
in dilatyng and openyng of it selfe,  
whiche sorte of mouynges we call the  
Gaudingus

beating

beating of the pulces, When the artires  
do open them selues, then they attract,  
drawe, or sucke in fresh ayre, to temper  
the heate of the body withall, and also  
spirituall and thynne pure blood. But  
when they close them selfe, then do they  
expel mistie fumes, and hoate breathes,  
or vnnaturall vapours, such as of ne-  
cessitie alwayes be engendred in al par-  
tes of the bodye, by the whiche blood  
doth passe, for causes to long here to be  
alledged, neither is there anye notable  
bayne vnassociate of an artyre.

Nowe on the ryght side and forepart  
of the great vaine proceadeth a braunch,  
derived from that place a longe the  
loynes downwardes to the head of the  
ryght stone, from the ryght syde lyke-  
wyse and foreface of the great artyre,  
descendeth a braunche thwarting ouer  
the great bayne downe towardes the  
ryght loynes, wher it meeting with the  
foresayde bayne braunche, before they  
emplant them selfe in the head of the  
stone, become both as one bodye, here  
straight

The meeting  
of the bayne  
and artire.

The first booke.

straight enlarging them selfe , little and  
little stepelwyse , not fully rounde , but  
flattishe before and behinde , With the  
broder ende planting & infixing them-  
selfe into the head of the ryght stone.

And at the vpper and smaller ende,  
Where this bayne braunche and artyre  
braunche do first meete, they beginne to  
entermingle , embrayde , and enterlade  
eche other in suche infinite Wyse , Wry-  
thyng and diuidyng them selues in  
thousande of little braunches , as it  
Were heeres of the head , the one em-  
brasing, compassing, and ouerthwar-  
ting the other so confusedly, that no wit  
can expresse the ryght maner and order

The bradys  
body. of their commixtione . Call this parte  
then in English, the bradid body, in La-  
tin Varicosū formemplexum, Whose nether &  
broder ende , as I sayde before, affixed  
and implanted in the vpper head of the  
ryght stone , sendeth foorth braunches  
and armes into the bodye of the same  
stone, manyfoldwyse dispersed, spread,  
and commixt.

And

And also into the skin or couer of the stone, called before Supergeminalis, frō the saide bradid body, be there derived many small braunches, muche lyke vnto the little small baynes whiche ye see reddishe in a mans eye.

And looke what discription and proesse we haue made of the ryght syde seede bringers to the ryght stone, euen the same understand of the left side sede bryngers to the left stone, sauyng that the bayne braunche whiche commeth to the left stone, most commonly taketh his originall of the nether syde of the left kydney bayne, and not immediatly of the great bayne as the other.

And ye shall understand agayne, that from the foresaid bayne & artyre of echē side, at the place where theyr fyrt coniunction or meeting is, proceadeth a certayne braunche of the bayne, assolate with the artyre, which both passe forth together to the found or bottome of the mother or matrix, of that syde where they stande, there delatyng and spreedyng

Waynes de-  
rived to the  
bottome of  
the matrix.

The first booke.  
dyng them selfe abroade in manyfolde  
smaller braunches, to the nourishment  
of the body of the matrix.

**C**Of the office and vse of these seede  
bryngers. Capit.x.

The seede  
procreate of  
the bayne  
blood and  
the articall  
blood.

**B**rough these seede bringers,  
blood out of the baynes, and  
lively spirite out of the artires  
be deriuued, yea, or rather (to  
speake more properlye) attract or dra-  
wen into the stones, there by vertue and  
naturall instinctiōn of the place altered  
and chaunged, beyng fyſt confused to-  
gether the blood and the spirite, by mu-  
tuall amplexations or embracementes  
of these two vesseſſes, the bayne and  
the artyre beyng conioyned and unte  
in one very body, fyſt beginning in the  
braſid body, & then after in the whole  
bodye of the ſtone: So that thorowe  
the manyfolde and infinite circulati-  
ons of the attracted matter by the con-  
duictes or baynes infinitelye intricate  
and

and wrythed with a thousande revolutions or turagaynes (and all in the little compasse of the bodye of the stones) the blood and spirite commixed togerher, getteth another nature and propertie both in colour and effect.

And here ye shall understande, that note the en  
moste commonly alwayes when that  
nature is disposed to make a transmu-  
tation of any matter, that can she not  
do, vntesse she haue a mine, shopp, or  
workehouse, wherein by continuall cir-  
culatio of the matter transmutable, she  
may bryng her purpose to passe: Euen  
as mettalles and other minerals of the  
earth, haue they secrete and vniuersible  
baynes, in whiche by daylye and long  
coagation, mouyng, circulation, and  
hurling together, they be brought from  
one forme to another, & made metals  
of that the whiche before was none.

Of these sort of mines, there be fourre  
principall in the body of man.  
The first is the mine of blood, which is  
the lyuer, in whom the iuyce of meate,  
E I before

Fourre  
mines in  
mans body.

# The first booke.

before of colour whyte, is transmuted  
into red, made apt and fitte to nouryshe  
all partes of the bodye, attract and dra-  
wen out of the stomacke and guttes,  
thorowe verye small and infinite little  
baynes into the lyuer.

The heart  
is the second  
mine.

The seconde mine is the heart, which  
of the blood attract and drawen from  
the great maister bayne, proceeding out  
of the foresayde lyuer, into his parlors,  
doth engender vehement and lively spi-  
rite, comixed with depured and greatly  
eleborated blood, within the selles of  
the heart, from thence sent forth tho-  
rowe the artyses, into all partes of the  
body, beyng in colour yeallowishe, thyn  
and hotte blood.

The brayne  
the thirde  
mine.

The thyrd mine is the brayne, of  
whom all the sinewes take theyr origi-  
nall. In whom the wittie spirite, the  
spirites of mouyng, and the spirites of  
al sensibilitie be engendred, and thorow  
the sinewes sent to all partes of the bo-  
dye. For all suche partes as moue and  
feele, haue that by reason of sinewes de-  
riued

riued vnto those places from the head.

The fourth mine is the stones in whō  
by comixtion of all the other three fore-  
said metalles of the body, that is to say,  
bayne blood, arteriall blood, and lyuely  
spirites engendred in the head, is engen-  
dered & produced seede, whiche bestowed  
in his due place, becommeth lyke a per-  
fection to the creature from whence it  
camie, that is to say, of mankinde, man.

But ye shall understande, that the re-  
ceauyng of the seede into the stones, is Howe the  
seede is re-  
ceaved into  
the stones.  
not that there shoulde be any one onlye  
cane, holownesse, sell, vaulte, or parler  
in the bodye of the stone, wherein it  
myght be receaved and retayned, lyke  
as the holownesse of an egge, the meate  
beyng out of it, or of an haseill nutte, the  
kernell out of it, but farre otherwyse:  
for the stones (chefely in man more then  
in woman) be massife, not hard, but de-  
licate and softe, as a softe kernell, full of  
small & almost vnensible white baines,  
revolving them selfe in and out a thou-  
sand folde, and manyfold wise intricate

Eij toge-

# The first booke.

together, within the which the seede is conueyed, carayed, concocted, or digested and altered, by vertue of the white flesh, whiche intercurreth and interminglith it self euery where betwene the foresaid bayne, lyke as the earth doth intercurre and intermingle it selfe betweene and among the small fibres, beardes, or heares of rootes: the Whyte coate also or walles of the said baynes, helping not a lytle to the transmutation of the colour from red to Whyte.

Liquid thin-  
ges sauou-  
reth of the  
nature of  
the vessels  
thoroewe  
whiche it  
runneth.

For euery thing that is liquid, as the seede is, receaueth alwayes a nature of the place, mine, or conduit, by whiche it runneth and passeth, so that when the conduit is very small and narowe, and long withall, then the liquor that passeth through it, receaueth and sauourereth so muche the more the nature and condition of that vessel or conduit. As for an example: If there were a conduit or pipe made of lead, whose length were ten foote, and the inner compasse, holownesse, or cavitie of the same, but so much that

Howe the  
colour of  
the seede is  
transmuted.

that an heere myght passe through it: then say I, that a gallo or quart of wa-  
ter passing and thrillyng through that  
narowe conduit shoude sauour much  
more of the nature and qualite of lead,  
then though the holownesse of the a-  
foresayde conduit, beyng styll of the  
abouenamed length, were so large that  
a bowle might enter and passe thorowe  
the same. For this reason, that when  
the water hath to passe thorowe so na-  
row passage, it maketh the longer jour-  
ney, and yeeldeþ the smaller threade or  
streen, and therfore is touched more im-  
mediately and intyrelly of the insydes or  
inner walles of the conduit. And fur-  
ther, Well ye wote that a lytle quanti-  
tē is sooner ouercome & altered, then a  
great. As a spooneful of wine standyng  
all nyght in a pewter or brasen pot, shall  
sauour muche more of the potte, then a  
pynte of the same. Lykewyse, yf a man  
woulde coole hoate drynke by pouring  
of it out of one pot or cup into another,  
sooner and more perfectly shall the cir-

A little quan-  
titie sooner  
ouercome  
then a grea-  
ter.

# The first Booke.

The policie  
of nature.

cumstant tolde ayre alter and coole it,  
beyng poured out very softly, makynge  
therof a fine and small streen, then yf he  
dyd the same hastyly. And truely this  
engine and pollicie doth nature vse in  
euery part where she causeth any nota-  
ble transmutation, makynge the matter  
transmutable to passe through longe  
strayghtes & narrow turagayne lanes,  
the matter bowyng, encluyng , and  
aptynge it selfe alwayes to the dispositi-  
on and nature of the vesselles thorowe  
whiche it cooleth or runneth , so that the  
sparme or sede of man or woman, being  
attracted by the foresaid seede bryngers  
into the stones, passeth by many narow  
strayghtes, whiche beyng before bayne  
blood and artire blood, by vertue of the  
places through whiche it had to passe,  
becommeth from red colour to whyte,  
& of much more perfection then it was  
before. For this transmutation of blood  
into sparme, is not only in colours, but  
also in properties and absolute perfecti-  
on. what greater wonder or miracle is  
there,

The trans-  
mutation of  
blood into  
sparme.

there, wherein we may knowledge and beholde the omnipotencie of God, then to consyder howe that of the meate and drynke whiche we dayly do eate, by digestiō first of the stomacke, the fine iuice therof is separated from the drosse and grosser part: & then after at the seconde hande, the foresayde iuice passyng thoro w the guttes, attract and drawen into the lyuer thoro w infinite smal baynes, there transmuted into blood, from the lyuer sent into the great maister bayne, from the which the heart drawynge part, transmuteth certayne thereof into Artire blood. Agayne, the stones drawynge other part, maketh thereof & of the artire blood, whorled, circulate, and coagitate together, sparne: whiche sparne bestowed and conceaued where it shoulde be, becommeth mankynde.

This foresaide seede, as we saide before, is nothing so firme, perfect, absolute and mightie in woman as in man, & yet can you not call this any imperfection or lack in woman: for the woman in her

Howe meat  
and drinke  
is transmu-  
ted into  
blood.

The seede  
in woman,  
not so firme  
as in man,

E iiiij kynde,

## The first booke.

kynge, and for the office & purpose wherfore she was made, is even as absolute and perfect as man in his kynd, neyther is woman to be called (as some do) vnprefecter then man (for because that man is more myghtier and strong, the woman weaker & more feeble.) For by this reason, the horse, the lion, the elephante, camell, & many other beastes, should be called more perfect then man, to the whiche man is not able to compare in naturall myght and strength.

But truely, comparyng one man to another, such as be gelded and want the genitories, be much feebler, weake, & effeminate, the other: in boyce woman lyke, in gesture and condition nice, in softnes of skyn and plumpnes of the body fatter and rounder, in strength and force impotent, nothing manly ne bold, the whiche imbecilitie in them, maye wel be named imperfection. For imperfection is, whē that any particular creature doth lacke any propertie, instrument, or qualitie whiche commonly by nature

Who be vnprefecter the one then the other.

nature is in all other, or the more part of that kynde, comparyng it to other of the same kinde, & not of another kynde.

Thus we haue sufficiently talked of the seede bryngers & stones, with theyr offices. Nowe shall I declare what commeth of the seede being thus engendred, and whyther it is conveyed.

C Of the way by the which the seede is sent from the stones to the angles and corners of the patir. Cap. ri.

A The lower end & foote or base of the braded body wher it is infixed & planeted into the head of the stone, on the backe syde halfe of the stone there is the begynnyng of another vessel, which may be called the seede caryer, in Latine Vas semen deferens, Whose body is whyte and hardishe, like an harde sinewe. And from that part where it taketh his begynnyng, it pas-

Of the seede  
carriers,

seth

The first booke.

seth downewardes to the syde of the stone, hoopyng and compassyng along the syde therof (as ye may more expreſſe perceave in the figure hereof) tyll it come to the lower ende or base of the stone, from thence agayne restyng or remountyng vpwarde, creeping along the other syde of the ſame ſtone, tyll it come and attayne in maner to the myddle region of the ſtone on that ſide, al the way as it creepeth, firmly fastned and affixed to the body of the ſtones, as the eye braunches do fasten them ſelues to the walles, by whiche they creepe.

The bellye and innersyde of the foreſaide ſeede carier, wherby it cleaueth to the outsyde or face of the ſtone, beynge flattyshe, the backe or outer ſyde therof roundyshe and smothe. From the begynnyng & head of this vefell, to this later ende in maner of equall corpulencie or bygnesse, but infinitely wreathed as an adder or yeele when thei ſlide fast or hastylye, make of theyr long bodyes many halfe hoopes, halfe circles, or wreathes

Wreathes nere ioyned together: howe-  
be it, these wreathes be not so frequent  
and thicke in the woman as in the man.  
Therefore this part of the seede car-  
ers may be called the Worme, in Latin,  
*Corpus lumbricolum*, for because that it hath Of the part  
called the  
worme.

And yf ye be disposed to separate this  
forenamed Worme from the face of the  
stone With a sharpe knyfe, ye shall per-  
ceave no maner of holonesse or cautie  
of bayne or other cōduite: but as it were  
a ruggednesse, by reason of separation  
from the partie to whom it was before  
so surely annexed. And yet no doubt,  
there is veryly in it cautie and hollow-  
nesse, by and thorowe the whiche seede  
is caried into the angles of the Matrix.  
Nowe then when this foresayde Wor-  
mye body hath attayned to the myddle  
region(as it were) of the stone, it begyn-  
neth to depart from the bodye of the  
stone, and is no more (as it was before)  
thicke

# The first Booke.

thicke wreathed, but playne, smothē, &  
rounde lyke a rounde sinewe, with an  
unsensible holonesse, departyng frō the  
stone along the insyde of the belly, ouer-  
thwartynge the guttes, to the angle or  
corner of the Matrix, on the ryght syde  
thereof (yf it proceede from the ryght  
stone) and on the left syde (if it come frō  
the left stone) and that not strayght or  
forthryght, but somewhat bowyng &  
crookyng it selfe in two or three crookes  
by the way. These seede carvers recea-  
uethe the seede confected, concocted, and  
digested in the stones and foresayd seede  
bryngers, conueying and directyng the  
same from the stones to the insyde of  
the corners of the Matrix, so that they  
whiche do open dead women, shall al-  
wayes perceave in the holownes of the  
Matrix, these two angles or corners  
specially bedeawed or imbrued with a  
whyte slyme and thynne cleare mat-  
ter, whiche no doubt is the womans  
seede. And in women hauyng greate  
and

& seruent desire to any man, this seede  
doth issue from this foresayde place,  
downe along to the Womans priue pas-  
sage, moistring all that part, as it were  
with a deawe. Aristotle and other mo-  
do suppose that this seede in Woman,  
serueth for no other purpose, but onlye  
to recite, moue, and stirre the Woman  
to pleasure. But some paradynture  
would thinke that this were but a sim-  
ple & anydle or slender purpose, whiche  
if thei did more nerely consider the mat-  
ter, shold perceave it to be a iust, great,  
and necessary cause. For if that the god  
of nature had not instincted, and inset  
in the body of man and Woman, such a  
vehement and ardent appetite and lust,  
the one lawfully to compayne with the  
other, neyther man ne Woman woulde  
never haue ben so attentife to the Wor-  
kes of generation and encreasement of  
posteritie, to the vtter decaye in shorte  
tyme of al mankynde. For ye shal heare  
some Women in tyme of theyr trauayle,  
moued through great payne and intol-  
lerable

The prickes  
of nature.

# The first booke.

lerable anguishe, forsware and wolue them selfe, never to compayne with a man agayne, yet after that the panges be passed, within short whyle, for entyre loue to theyz husbandes, and singular naturall delyte betweene man and woman, they forget both the sorow passed, and that that is to come. Suche be the priuie workes of God, and suche be the prickes of nature, which never createth no speciaill pleasure vnaccompanyed with some sorowe, neyther is there for the moste part any sorowe, but that it hath annexed some ioy or comfort, lesse or more, to alleuiate and lyghten the burthen and weyght of displeasure.

No ioy with  
out some so-  
rowe.

Here is declared the situation of the bladder in women.

Cap.xii.

**N**owe for the vicinite and neighbourhooch that is betweene the priuie passage and the bladder, here I will declare a lytle the nature of the bladder.

The

The bladder in woman is assituate  
and set vpon the forepart of the Mo-  
ther, whose necke is annexed, fastened, &  
unite within the priue passage, vpon  
the forepart therof, as ye may see in the  
figure hereof, so that it is very harde to  
separate the one from the other. This The Mus-  
cle of the  
bladder.  
necke of the bladder in women is much  
shorter then in men, the which necke is  
enironed and compassed with a Mus-  
kle, called the bladder Muskle, as it  
were with a brode and flat hoope ryng,  
firming and clasping the vrine passage  
in such wise, that no vrine can issue out  
of the bladder, tyll such tyme that this  
Muskle do open it selfe, & licence it ther-  
to: which thing cometh to passe, other  
When the bladder is ouercharged With Howe the  
bladder  
Muskle is  
forced to  
open it selfe  
vrine, or els that the vrine, although  
that it be but lytle in quantitie, yet haue  
some Colericke qualitie with it, whiche  
for the sharpenesse and eagernesse of  
the qualitie pryckyng and ticklyng the  
Muskle, causeth it to open it selfe ma-  
ny tymes for lytle quantitie. &c.

The

# The first booke.

The descrip-  
tion of the  
bladder. The body of the bladder is rounde, into  
the which a lytle aboue the necke ther-  
of, entreth the seconde vrine conduites,  
deriuued from eche kidney one.

And here ye must first vnderstande,  
that on eche syde of the great master  
vayne, and lykewyse of the Artyre, is si-  
tuate a kidney, in Latin called Ren. And  
to euery of them from the sayde great  
vayne and great Artyre, is there deri-  
ued a braunche of the vayne, and ano-  
ther of the Artyre, by the which braun-  
ches the kydneyes do attract and drawe  
blood vnto them, the which so drawen,  
they do (by theyr native office) separate  
and diuide from the Watery part, sen-  
dyng forth the water, otherwyse called  
vrine, downe to the bladder, through  
the vrine vaynes, or conduites.

¶ Of the stone  
engendred  
in the backe In these kidneyes is there many times  
in a great number of people, engendred  
the grauell or stone, which is called the  
stone in the backe, the which when it is  
broken, eyther of it selfe, or els by vertue  
of medicines, the grauell, rubbell, or  
peeces

peeces therof, descend from the raynes  
or kidnees into the bladder, by the fore-  
named brine conduites, and so from the  
bladder out at the yarde, where, ys the  
peeces be rockie or bigge, it causeth to  
the partie in the boydying of them, vr-  
tollerable paynes and torment. And  
note that for the moste part, the ryght  
kydney euermore standeth hyer then  
the leste.

Nowe agayne ye shall understande  
that whan the bryne, pisle, or water is  
once entred through the foresayde brine  
conduites, into the bladder, it can not  
returne vpwarde agayne the way that  
it came (were the bladder never so ful)  
for because that whare as the said brine  
conduites do enter into the bladder, in  
the inner face of þe bladder, there be set  
before the mouth or gull of the condui-  
tes, certayne little skinnie flappes, whiche  
suffer any thing to enter in, but whan  
it is once entred, these skinnie flappes  
close the passage, and defende, that no  
thyng can rebounde, ne reslue backe a-

The bryne  
once entred  
into þe blad-  
der, can not  
revert.

¶

gayne,

gayne , euen as it is in a payre of bellowes, which haue euer a great hole on the one syde thereof , to let into the bellowes great store of Wynde or ayre at once, but when the bellowes is full of Wynde, yf ye stop the nose thereof with somewhat, there wyl none thereof returne agayne out by that waye , the flappes of leather crossing and defendyng the passage : yea , the more vehemently and the harder that ye presse both sydes of the bellowes together, the faster and more stify doth the flaps stop the waye, and cleave to the bordes of the bellowes , the violence and force of the Wynde closing and stopping his owne way, so that the bellowes would sooner breake, then that the ayre shold come out there . And euen so it is in the bladder , sauing that the sayde skinnie flappes of the bladder, be more craftily, properly, and artificially wrought, then any man can devise.

When there is then anye notable quantitie or qualitie of the vryne , gathered

thered together in the bladder , the bladder Muskle naturally doth open it selfe, and letteh it foorth , passyng thorowe the priuie passage on the forepart thereof.

In this bladder also as in the raynes, is there in manye people engendred the stone, Whereof commonly ensueth the strangury, dissury, with other diseases.

The stone engendred in this place, yf it be of any notable quantitie , is verye harde or rather vnpossible to be dissolued , or cured without insition and cutting out . But Women be not so prone ne apt to engender the stone in the bladder as men be, because the necke of their bladder is shorтер and larger, howbeit notwithstanding, dyuers of them be herewith greeuously encombred.

C Of the baynes which resort to the matrix and the partes thereof,

Item of the termes & their course with the causes thereof. Cap.xiii.

Fij In-

**S**oasmuch as the absolute vnderstanding of the nature of the termes in women, can not wel be perceiued, except firstit be knowē what baines, how many, from whence, & after what sort they do attayne to the matrix: therfore first I will entreate of them, & then cosequently of the termes.

Three notable baynes resorting to the matrix.

Baynes then notable, which may be perceaued by Anothomie to reach from feuerall partes of the great Vena cava, or maister bayne , to the matrix and the partes therof, be thre, to whom for the more cleare , distinct , and evident doctrine sake, I wil geue three distinct and diuers names . The first shalbe named the bottome baines of the matrix. The second, the necke baynes of the matrix. The thyrde, the share baynes.

The bottome baines of the matrix.

The bottome baynes be they, which proceade and take their begynnyng at the seede bringer baynes, from whence they attayne to the bottome or founde of the matrix , there dilating themselfe

selfe brode in manyfolde small slippes,  
noryshyng the bodye of the matrix, as  
hath ben sayde alredye in the ende of  
the ix. Chapter.

As touchyng the necke baynes of the  
matrix, ye shall understande that in the  
foresaid ix. chapter, I shewed you how  
that the great maister bayne, and the  
great artire associate together, when  
they attayne about Os sacrum, they begin  
to diuide them selues in two partes  
forkwyse, of the whiche the ryght (¶ so  
likewyse the left) part of the forke is re-  
diuided in other two partes forkwyse  
also, wherof the uppermoste and grea-  
test bayne passeth downe along tyll it  
come to the hockle bone, ouer whom it  
proceedeth into the vter parte of the  
thygh, ¶ so along downe to the legges  
and feete. The innermost and lefte or  
smaller part or bayne of this seconde di-  
vision, where it parteth from the up-  
permoste, passeth downe along vntyll  
it come to the great hole whiche is al-  
wayes in þ share bone, through whiche

The necke  
baynes.

Of the neck  
baynes or  
the matrix.

it entereth into the inner parte of the thygh or flanke. But by the way, or it attayne the sayd hole of the sharebone, it sendeth forth divers slippes and smal braunches in the necke of the matrix, and the nether parte of the body of the matrix, and also to the bladder, as ye may more clerely see in þ figure hereof.

The share  
baynes.

The share baynes take their begynnyng at the insyde of the aboue named uppermost and greatest bayne, euen at the place where it beginneth to passe ouer þ hockle bone, frō whence this slip is derived on ech side, that is, both the ryght and the leste, unto the middle of the sharebone, where in men it sendeth forth braunches into the skinne that covereth the priuie parte and the coddes, & also the Perineum, whiche is the place that is betweene the fundement and the yard. In women this baine where it attayneth the middle parte of the sharebone, it deriveth and spreadeth it selfe into the lappes, sydes, or extreme ende of the priuie passage, and also in

the

the sayde perineum. And this shall suffice for the declaration of the baynes Whiche resort to the matrix and her partes, saue that ye maste understande , that luke what order or procession of baynes commeth to the matrix from the ryght syde, the same selfe order is lykeWyse in the lefte syde : and agayne , that none of these baynes runne to the matrix or otherwher , vnassociate of an artire.

Nowe to come to the declaration of the nature of termes: ye shal vnderstād that they be called in Latin Menstrua, so, because that once in a moneth they happen alwayes to Womankinde after .xiiiij or .xv. yeres of age passed (beyng in their perfect health) In Englishe they be named Termes, because they retourne estisones at certayne seasons, tymes, and termes, and some name them their flowers. What name soever ye geue unto it, ye shall wite, that the thyng meant thereby , is nothyng els but the issyng of certayne blood,

What is  
meant by  
this worde  
Termes.

F iiiij compre-

The lxxv booke.

comprehended in the baynes of the ma-  
trix , there by little and little collected  
and gathered betweene terme & terme,  
and so agayne at Wont and accustomed  
tymes , by nature expelled and sente  
forth.

The which blood, the matrix baines  
do attract from the great vena caua, into  
this part , and that not sodaynely or at  
once, but very soberly, and with muche  
leasure , yea , so muche as there is space  
betweene the one hauing of the flosbres  
& the other (Whiche is commonly three  
Wekes , more or lesse , accordyng to the  
Womans Wont ) so long be these sayde  
baynes in filling , and yf they were so-  
ner full, soner also woulde they sende it  
forth againe. For when they be once re-  
plenished , they can not conueniently or  
naturallly contayne or drawe any more,  
tyl they be lyghtened and discharged of  
that that is drawen alredy.

Wherfore at the foresayde certayne  
circuites and termes, the small endes of  
these matrix baynes open them selues  
in

in the inner face or superficie of the matrix , after an insensible & secrete priuie sort , and so let to passe foorth this blood , which as I haue sayd , is called the Womans teernes .

The cause and reason Why nature  
created this perpetual course of ternies  
in women , is this : Forasmuche as al-  
myghtie God had so institute that Wo-  
man shold be conceaued , eformed , or  
fassyoned , augmented , nouryshed , and  
brought to perfection . This coulde not  
be done vnlesse there were a commodi-  
ous and conuenient place to this office  
assigned and destinate , whereof nature  
created the Wombe or matrix to be the  
sayde receptacle , & house of office wher-  
in she mought at her leisure worke her  
deuine feates about the seede once con-  
ceaued .

The cause  
of the ordi-  
naunce of  
teernes .

Agayne it is not inough the seede to  
be placed . vnlesse also it haue foode and  
nouryshment , to the encrease and aug-  
mentation of the same , Wherefore pru-  
dent Lady nature full wisely hath pro-  
uided

nided, that there shoulde alwayes be prest and redye a continual course and resort of blood in the vaines of the ma-  
trix, as a very naturall course, spryng,  
fountayne, or Wel, euermore redy to ar-  
rouse Water, and noishe the feature, so  
sone as it shalbe conceiued, yea although  
the woman do never conceiue, other be-  
cause she accompanieth not with man,  
other els for some other infirmitie, yet  
is there no fault in nature, who hath  
prepared a place and foode to be at all  
tymes in a redynesse.

Whiche foode, although it is ordeyned  
for this necessary purpose, yet whē the  
purpose fayleth (as it doth when there  
is no feature in the wombe to be fedde  
therewith) it should be to the place but  
a burthen and unprofitable loade, there  
to remayne or lynger: wherfore then I  
say, at her set and prescript tyme she la-  
boureth to cleare her self of it, and to ex-  
pell it as superfluous and seruing to no  
use. The which thing when she hath so  
done, yet unto the sayde vaynes of this

con-

continual spring, resorteth of newe a-  
gayne other freshe blood in the place of  
that that is departed, whiche by litle  
and litle coling into them, in the wond  
circuite of time refilleth them, and then  
yet issueth agayne, and so this continu-  
al course doth kepe alwaies in women,  
from their youth, tyll they come to a  
bout fiftie yeres of age, or litle more or  
lesse, at what time naturally this spring  
dryeth away, which when it is gone, it  
is impossible for the woman to beare a-  
ny mo children. For were the woman ne-  
uer so yong & lusty, yet yf she never had  
her termes (as some suche there be) she  
shal never also haue no chyl-  
dren, albeit it  
may be that she may conceaue, but the  
seede conceaued can not proue, but mel-  
teth & issueth foorth agayne for lacke of  
nutriment. Itē ye shal note, that where  
as some write & saye that the womens  
termes folowe the course of the moone,  
so that in the full or in the wane of the  
moone they shal alwaies come: this is  
not true, for they haue them at one time  
and

They that  
haue no ter-  
mes can not  
beare chyl-  
dren.

# The first booke.

Tearmes  
come not to  
all women  
lyke.

and other in all seasons of the moone.  
Againe, as they come not to all women  
after one sort, or at one season, so is the  
tyme of their duraunce not all one in e-  
uerye woman, for in some they lynger  
vpon them. v. vi. vii. yea. viii. dayes at  
ech termie, to their great effeoblishment  
& strong paines in the backe. In some  
other comonly they passe not the space  
of three dayes at the vttermost, Where-  
fore such sustayne litle or no paynes at  
that tyme.

To be short, all women (for the most  
part) which be of very delicate & moist  
complexions (as the sanguyne cheefely  
be) haue greatest abundance of termes,  
and longer tyme doth it endure vpon  
them. And contrary, such as be dry and  
collerike, other by nature, or labour and  
trauaile, & suche that be of complexion  
cold, haue least store of termes, and lesse  
tyme do they endure vpon them. After  
What maner the feature conceaued is  
fedde and nouryshed with this bloode  
(matter at other times of þ termes) I  
Wyll

Wyll declare, When that I haue some-  
what firsste shewed the nature of cer-  
taine caules, Wherein the feature con-  
ceaued is wrapped and involued.

Of the three caules or Wrappers wher-  
in the infant is lapped. Capit. xiii.

He seede concea-  
ued into þ Wombe  
or matrix of the  
mother, anon it is  
implected , clip-  
ped, & embraced of  
the inner face of þ  
matrix , þ mouth  
or port thereof in  
the meane while closed & shut exquisite-  
lye . The seede then when it hath ben a  
certayne little space in the Wombe , by  
the naturall heate , or rather by the in-  
set and ingenite vertue of that place, is  
environed & enclosed rounde with three  
diners coates , caules , or , Wrappers,  
Which in Latin they call (Inuolucra.)

The feature  
conceaued is  
wrapped in  
three caules.

The first and moste immediate or  
nearest

# The first booke.

## The first caule

nearest to the body of the conception, is a very thinne and cleare caule or skinne, whiche contayneth rounde about the whole feature, and yet is fastened to no part of the feature, but onlye at the nuell, by certayne baynes and artires, whereof we wyll speake anone, this caule in Greke is called Amnios, in Latin Agniua, for cause it is as delicate as lambes be. The Midwifes commonly call it the coyfe or biggen of the chylde, and some call it the chyldes shert, the which also manye tymes proceedeth alone with the childe, eyther vpon the childe's head, or one of y' armes or legges. And then the women reserue it as a thyng that shoulde betoken some great lucke to the chylde in tyme to come, for they beleue that euery chylde hath not suche a coyfe, because it doth appeare but selome alone, vnaccompanyed with the other caules. Betwene this wrapper or coyfe, and the body of the infant, is collected and gathered the yelowish sweat which evaporeth continually from the skyn

skinne of the infant, whylest it is in the wombe.

The second Wrapper or caule in Greke  
is called Allantoides, in latin Farcimina  
The second wrapper.

Englishe, these two termes do signifie  
(haggiswyse) for because that it is fas-  
tioned much after the shape of the out-  
warde skinne or bagge of an haggis-  
pudding. The inner face and superficie  
of this caule is smoth and moyste, faste-  
ned to no part of the first wrapper, but  
onlye at the nauell of the chylde, and  
contayneth also rounde about in his  
compasse and cavitie or holownes, the  
whole childe, and the saide first caule.

Betwene this and the first caule, is  
gathered together all the store of bryne  
that the chylde maketh, duryng the  
time it is in the mothers wombe, wher-  
in the industry of nature is to be lau-  
ded, which so prouideth, that this pisse  
or bryne of the infant shold be expelled  
betwene these two caules, and not re-  
mayne about the body therof, lest with  
the acrimonye and eager sharpenesse  
hereof,

The first booke.

hereof, it shoulde endamage and greene  
the tender body of the baby.

The thirde  
wrapper na-  
med Chorion  
in Latin,  
secunde or secundina, in English ye may  
call it the secundine: Albeit that in the  
second booke folowyng, I do common-  
lye vse to name þ whol afterbyrþ, the  
secundine. And no doubt but that the  
auncientes which gaue the name of (se-  
cunde or secundina) to this wrapper, gaue  
the name of the whol to the part, for  
this terme (secunde) or (secundina) is proper  
& most due to the afterbyrþ, the whch  
afterbyrþ, is nothing els but an issu-  
yng forth, and proceeding of these three  
wrappers or caules, together with such  
grosse excrementes as haue ben engen-  
dered and remayning in the Wombe, du-  
ryng the tyme of conception, and that  
immediatly after the chylde is first pro-  
ceeded & come to lyght, for first issueth  
the infante, and then secondlye, the fore-  
said afterbirth, & therfore it may be just-  
lye called the second birth or secundine.  
This

This wrapper or caule then doth not  
vniversally, and in every part compasse  
and couer the infant as the other two  
wrappers do, but onlye the myddle re-  
gion, as it were from the vpper part of  
the waste, to the share of the infant, so  
that it is compassed with this wrapper  
as with a broade hoope ryng, the lati-  
tude or breadth whereof, is commonly  
to be esteemed about the breadth of. vi.  
or. viii. fingers, and so girdeth the childe  
round about the body therof, as it were  
a broade gyrrh or swadlyng bande, but  
yet ye must not understand that it shuld  
touche immediatlye the body of the in-  
fant, for betweene this and the bodye  
therof (as I haue declared before) be  
the foresaid two other caules or wrap-  
pers, which generally incloseth rounde  
the whole corps of the infant, wher as  
this hoope caule compasseth and coue-  
reth but the middle region therof only.

The office and propertie of this wrap-  
per is such: Fyrst the vttre face of it The office  
of the hoope  
caule,

The first booke.

exactly to the inner face and walles of  
the Matrix, by meanes of vnumera-  
ble small baynes and artires, whiche at  
this tyme do shewe them selues more  
clearely in the face of the Matrix, then  
at any other time, the whiche also cleane  
vnto this hoope caule in every parte  
thereof, touchyng the same Matrix, so  
that the saide hoope caule and the inner  
syde of the Matrix be basted very thicke  
together, by the immediate meanes of  
the sayde baynes and braunches, even  
much lyke as the body of the Iuy tree  
basteth and fasteneth it selfe vnto the  
walles or trees, whereby it creepeth by  
many hearie fibres or small threedes.

This coniunction betweene the Matrix  
and the hoope caule, reacheth vniuer-  
sally so farre and so broade, as the lati-  
tude and longitude of the hoope caule  
doth extende it selfe rounde about in the  
Matrix. And these foresayd baynes and  
artires do not only knyt and unite these  
two together, but also entreteth into the  
substaunce of the hoope caule at enyre  
part

part thereof. And within the sayd substaunce of the hoope caule, these many-fold smal braunches meete, & enter mingle the one with the other, the baynes with the baynes, and the Artires with the Artires, so that in theyr recountre and meetyng, they produce alwayes bigger and bigger baynes and Artires, (but fewer) till at the last all these become two great baynes, and two great artires, the whiche foure vessells from hence proceede together, passe & pearle through the other two caules spoken of before, and so entreth into the Nauill of the childe, so that the thre caules by the meanes hereof be attached, nayled, and fastened to the childe's nauil, and when they be entred into the Nauil, the two baynes degenerate in one, the whiche fro this place mounteth uppward along the inner superficie of the belly, vntyll it haue attayned into the liver, wher it entering, diuideth it self againe into many lippes, so that no doubt the blood is carried through this nauial bayne, from the

Si  
baynes

The first booke.

haynes of the mothers Matrix into the  
luer of the chylde, from whence againe  
it is attracted into al partes noryshable  
of the Infant.

Agayne, the two Artyres passe from  
the Nauell downe warde, the one along  
the ryght syde of the chyldes bladder,  
the other along the left, tyll it attayne  
to the share Artires, whereof we spake  
before. Through these Artires, lyuely  
spirit and freshe ayre is derived out of  
the mother, into the chylde, wherewith  
the naturall heate of the chylde is vini-  
fied and refreshed.

And these two Artires with the fore-  
sayde nauyll vaine, when the chylde is  
borne, begin to wyther and drye, euerye  
day more and more, & become much like  
a harpestring, without any holownesse  
or cavitie. Yet ye shall note that there is  
another vessell, whiche taketh his origi-  
nall at the bottome, founde, or upper  
part of the chyldes bladder, and exten-  
deth it selfe to the nauyll of the Infant,  
through which it passeth vntyll it come  
betweene

The first booke. Fol. xxxiii.

betweene the fyrt and the seconde caule  
Without the chyldes bydy, Where, by a  
privie issue deuised by nature for the  
same purpose, is expelled the brine of  
the Infant, proceedingyng by this brine  
ayne from the bladder, as partly was  
spoken of before, that part of this brine  
ayne which is within the body, When  
the chylde is borne dryeth and with-  
reth away, as I sayde of the other.

The inner superficie or face of this  
Chorion is very strongly affixed and fast-  
ned to the vther superficie of the seconde  
caule named Allantoides.

As for the bastynge that is betweene  
the Matrix and Chorion, many tymes it  
is weakened and effeoblished by reason  
of euyll, flegmaticke, or colericke hu-  
mours therabout, betweene the bastin-  
ges conceaued, whiche ouermuche ha-  
bouding, do cloy the said bastynge baines  
or strynges, whereby manye tymes the  
one leuereth from the other before con-  
uenient season, & so causeth aborcement.  
The mouthes or specks of the baines in

633 the

## The first Booke.

the matrix, wherby it cleaueth to Chorio,  
be called in latin Acetabula & Cotyledones, for  
what cause, or vpon what reasō, is both  
needelesse and unprofitable here to be re-  
hearsed. Agayne, the substance of this  
Chorion is not thinne like a skin, bladder,  
or caule: but of al other partes of the bo-  
dye, it may be most worthyly resembled  
to the spleane or melt in a man or beast,  
the corpulencie or thicknes whereof, is  
as much or more as the thicknes of the  
thumbe, the colour swartishe black. Of  
which colour also the blood therein con-  
teyned, is as the remayne and refuse of  
the purer, attract and drawen natural-  
lye of the Infant, by the abouenamed  
naul bayne. So that, to be short, Chorion  
is the immediat receptacle and receauer  
of al the baynes and artires, to be dedu-  
ced from the Matrix to the chylde, and  
the chylde receaueth only at his hande  
the two baynes and Artires, Whiche  
by the way as they passe & pearse tho-  
row the other two calles, towardes the  
chyldes Nauyll, they sende into eche of  
the

The sub-  
stance of  
Chorion.

The first booke. Fol. xxxiii.

the caules innumerable small eye baynes and artynes, whereby the caules be susteyned, and encreased also.

The Termes then which were wont at other times to sturre theselues in the Matrix baynes, and at certayne circu-  
tes to issue foorth: Nowe when there is a feature or chylde in the same Matrix conceaued, they proceede no more foorth (as superfluous) but remayne and be re-  
serued to the necessarie nutriment of the feature, and some part therof reslueth & is reuerted to the Womens brestes, there  
to become mylke, as shalbe sayde in the next Chapter. And nowe hath nature her purpose wherfore she made and cre-  
ated this course of blood, as hath ben written sufficiently in the Chap. before.

But here ye shall note, that they be greatly deceaued and abused, which call the Termes the Womans purgation, or the cleansyng of theyr blood: as who shoud say that it were the refuse, drosse and byler part of the other blood remaynyng in the body, naturallye every

6ij moneth

# The first booke.

moneth sequestrate and separated from  
the purer, for the vilitie and euyll qual-  
tie therin comprehended. For vndoub-  
tedly this blood is euen as pure and hol-  
some as all the rest of the blood in anye  
part of the body els.

The termes  
be of so hol-  
some blood,  
as any other  
part in the  
body.

Is it to be thought, that nature would  
feede the tender & delicate Infant in the  
mothers Wombe, with the refuse of the  
blood, or not rather with the purest of  
it? Yes, and therfore for because that she  
Woulde that the pure blood commyng  
frō the Matrix baynes shoulde be made  
yet purer, she suffereth not the same to  
enter immediatly into the Infant, but

The chylde first vseth another meane, and sendeth it  
being in the womb, no-  
ryshed of the purest blood into Chorion or the hoope cal (as I haue  
sayd before) Where truely it hath a cer-  
tayne circulation and another digesti-  
on, wherby it is defecate, and cleansed ve-  
ry exquisitly, by the diligencie of nature  
attenuated and fined, and so at the laste  
sent forth into the Infant, leauyng all  
the grosser part in the spungy bodye of  
the hoope caule.

Pet

The first booke. Fol. xxxv.

Yet much more are to be detested and abhorred the shamefull lyes and slaunder that Plinic, Albertus magnus de secretis mulierum, & diuers other mo haue Wyttēn, of the venomous and daungerous infec-  
tive nature of the Womans flowres or termes, the whiche all be but dreames and playne dotage. To rehearse theyr fond wordes here, were but losse of inke & paper, wherefore let them passe with theyr authours.

Slaunders  
of the Ter-  
mes,

Which of the thre Matrix baynes conteynē the Termes, and howe the Mylke commeth to the womans brestes.

Cap. xv.

Shewed you here before, that to thre different partes & regiōs of the Matrix, there resorted from thre different partes of vena cava, thre sundrie bayne slips. Nowe whiche of these syppes shoulde bryng the blood

The first booke.

blood called the Termes into the Matrix, or from which of them the termes shoulde proceede, it is harde clearely to discusse, but onlye by lykely conjectures. And yet it is a thyng very necessar ye to be knowen, for the redyer aduertisement howe medicines for that purpose shoulde be applyed in that place, When neede shoulde be, eyther to prouoke the Termes by some casuallie stopped, or els contrary to restrayne them immoderately flowyng. For yf the bottome baynes of the Matrix do contayne only the Termes, then shoud any medicine conueyed vnderneath profite nothyng, except it be conueyed so farre vp, that it maye attayne within the holownesse of the Matrix, the whiche is verye lytle when the woman is not with chylde.

Agayne, yf the necke baynes of the Matrix do only conteyne these termes, then needed medicines to be applyed no farther then to that place. As for the thirde Matrix baynes, there is none  
that

The first booke.      Fol. xxxvi.

that doth once suspecte the Termes to proceede from them: But manye there be, which do suppose the termes to issue both at the necke vaines, and at the botome baynes also, but most notably at the necke baynes, for because (say they) that these baynes do appeare more conspicuous and notable to the eyes When a Woman is cut open, then do the botome baynes, which may be very skantly perceaued, wherfore they thinke that these necke baynes shoulde be the greater stirrer of Termes.

Agayne (say they) we see many tymes that after the Woman is conceaued, yet doth there issue termes tyll the thirde or fourth, yea sometymes the fyfth moneth, the which nowe at this tyme can not proceede out of the Matrix: for the port or mouth therof, accordyng to ancthours opinions, is so closed after the seede conceaued, that the poynt of a needle can not enter but by violence and force. Wherefore they conclude, that the Termes at this tyme muste needes  
spring

The first Booke.  
spryng out of the necke bayne, and not  
out of the bottome baynes.

To those I awnswere, that both at  
this tyme and at all other tymes, the  
Termes issue onlye out of the bottome  
baynes, & out of such of the necke baynes  
as spreade them selfe onlye Within the  
Matrix, as may be seene in the figure.  
For insomuche as nature dyd create the  
course of Termes for no othercause, but  
onlye to be a preast and redye foode at  
all tymes to the feature conceaued, to  
what purpose shoulde the Termes in  
the necke baynes of the Matrix serue,  
where there can never be any concepti-  
on, neither the seede there can remayne:  
And as concerning the issuyng of the  
Termes after conception, I say that  
the port of the Matrix is never so exact-  
ly close, but that such a liquid thing as  
blood is, may thryll and coole out of it,  
yea although (as they say) the poynt of  
a needle can not enter in thereat. For ye  
may see, that betweene the chynes and  
chynkes of closelye ioyned boordes,

the

The first booke. Fol. xxxvi.

the poynt of a needle will not easly enter, yet water or any other liquid thing, may passe through without lette, and even so is it in the Matrix.

And yet for all this, it shal not folowe that the seede shoulde passe out thereat, aswell as the blood, for the seede is of a more fast compacte, and stedfaste substance. And belydes this, by that tyme that the seede hath ben but a daye or two in the Matrix, it waxeth yet more stable and stedfast, by the naturall heate of the place, yea, and is compassed with a thinne ryme, as a tender egge is vnder the shell, wherfore it wyll not soone issue out of the Matrix without great inurie.

Here agayne ye shall note the cause why that phisitions do counsell women which be desirous to conceave, and can not for lubriticte, moistnes, or waterynnes of the Matrix (wherby the attractive and attentive power of the Matrix is debilitat and weakened) to take fumes and vapours vnderneth, or other medis

The first booke.

medicines at the mouth to drye the sayd  
humidities, immediatly after the Ter-  
mes be passed, and not vpon the com-  
myng of them, for ys the Woman shoulde  
be conceaued vpon the commyng of the  
sayde Ternes, then woulde they com-  
mixt them self with the seede, before the  
seede haue gotten yet any perfect ryne  
or caule, whereby the seede shoulde be  
come the thinner and be made fuy, and  
so to passe forth agayne out of the Ma-  
trix, washed out with the Ternes.

But immediatly after that the Ter-  
mes be passed, if the seede be conceaued,  
then shall it haue sufficient ryne to get  
a strong ryne or caule ouer it, before the  
Ternes come agayne. And agayne,  
whyles the little speckes or mouthes of  
the Matrix vaines be yet open, after the  
lettyng forth of the Ternes, they shal  
be the more apt to cleane and to ioyne  
thē selues with the feature, by meanes  
of calues wherein the feature is inuol-  
ued, and cheefely of Chorion, named the  
hoope caule, as hath ben sufficiellye  
sayd

sayde here before.

¶ Yet when the seede hath ben three or  
four weekes in the wombe, it is not of  
sufficient quantitie to consume into his  
nutriment all the blood that was wont  
to resort into the Matrix baynes, wher-  
fore the first, second, yea, & third moneth  
sometimes at the Womans wont tyme  
of Termes, there issueth and she weth  
some blood more or lesse, the more in thē  
whiche were wont at other tymes to  
haue aboundinge of them. &c. And ye  
shall note that when the child is concea-  
ued, & that the caule Chorion is fastened &  
basted to the matrix by the vaines ther-  
of, yet do not al the vaines of the matrix  
attaine to the said Chorion, but a certaine,  
so far as Chorion doth reach, howbeit the  
larger that Chorion groweth with þ child,  
the mo baynes doth he couer, wherfore  
frō those baynes that be not yet affixed  
vnto Chorion, do the termes flowe at this  
time: But whē the child beginneth once  
to come to a greater perfectiō & growth,  
then is all the Terme blood reserved

in

The first booke.

in the Matrix, as little enough to satis-  
fie the chylde, and then also part thereof  
mounteth vp into the brestes, and becom-  
meth mylke, as shalbe sayde hereafter.

Pet agayne to confirme myne opini-  
on, that the Ternes do only issue out  
of the vante of the Matrix: We shall un-  
derstande, that at sundry tymes I haue  
had two diuers women in cure, the one  
in London, and the other in Paris: Of  
which, the one by a fall of her horse, the  
other by a violent thrust and squat on  
the buttockes vpon the harde stones in  
the streete, beyng both neare the time of  
theyr purgation, chaunced also both of  
them into one maner of disease (that is  
to say) immediatlye herevpon, theyr  
Ternes dyd issue. And so continued  
dayly, to the one of them, the space of  
halfe a yere; & to the other a whole yere,  
so that after that time the Ternes stay-  
ed agayne, and issued no more dayly as  
before, but once in fourre wekes, at what  
time they boyled great lumpes, kakes,  
or cloddes of blood, congealed together  
even

even lyke the liuer of a beast. And in the  
meane time, betweene eche boydying of  
these lumpes of blood, (whiche as I  
haue sayde come to passe once in foure  
Wekes) every day continually appeared  
and issued there Whyte flowres (as  
they named it.)

Nowe to declare the particular occa-  
sions of this maner of boydying of the  
termes, ye shal vnderstand, that by the  
force of the fall and squat, the Matrix  
baynes brake, and that so muche the  
more promptly, that they were the ful-  
ler of blood, and that nearer their tyme  
of purgation, vppon whiche bracke, the  
blood dayly issued afterward, whereby  
the vigour & kind heate of the Matrix,  
by little and little decreased and decayed,  
frigiditie and coldnesse succeeded. By  
whiche occasion also the mouth or port  
of the Matrix, waxed the more contract  
and narrower, for colde closeth, knitteth,  
& congeleth. Hereto helped also not a li-  
tle the great vse of colde byndyng medi-  
cines, whiche eche of them dyd apply to

Hj      this

The first booke.  
this place at the simple counsayle of ignoraunt persons.

The port then of the Matrix by this occasion closed & contracted , the blood wont alwayes dayly to procede, remayneth within the Matrix , where as fast as it droppeth and cooleth out of the baynes, it congeleth and cluddereth together, lyke as ye may see, that whena man is let blood in a basin or other vessel , and that the blood stande still in it the space of .v. or .vi. houres, it wylbe concret and congiled in a cludder lyke a lyuer , the watery part thereof swimmynge and flitting aboue vpon the face of it : and euens so is it of the blood congeled in the Matrix , so that whenthere is so muche of this congiled blood ceaued together in the said matrix, that it can not contayne it any lenger , then violently and perforce it issueth out together, with farre greater peril, daunger , and dolour to the Woman , then though she laboured with a childe.

The whyte flowres that issued, durring

ring the tyme that this blood gathered  
in the matrix, was (no doubt) the verye  
waterishe part that fleted when the  
blood congiled, for that water can ne-  
uer congile as the blood doth, wherfore  
euerye day as fast as the blood dyd con-  
gyle in the matrix, so faste also dyd the  
water seperate it selfe from the blood,  
and so issued.

Notwithstanding I am not ignorant  
that the very Whyte flowres in dede do  
procede from the seede cariars, into the  
angles or corners of the matrix, and so  
frō thence outwarde, the which disease  
also men haue manye tymes. And it  
commeth eyther of the aboundaunce of  
fleugme in the body, or of the corruptiō  
and euyll qualitie mixed in the seede. &c.

These examples as I suppose may be  
sufficient evidences, that the Termes  
spring alwayes frō within the matrix,  
& not from any part of the necke therof.  
Item I haue sene diuers other Womē,  
in whom their termes haue staied the  
space of. vi. viii. & x. wekes, wherewith  
*Hij* their

their bellies haue encreased and waxed  
bigger , so that they haue thought the-  
selues to be with chylde: Notwithstan-  
dyng, at the last haue boyded suche lyke  
lumpes of blood, as I haue spoken of  
here before , not without greate peryll  
and daunger to them in the boydys,  
Wherewithall their bellies haue relan-  
ked and decreased agayne. And thus I  
make an ende, to talke anye more of the  
nature and course of the Termes: and  
now wyll I declare somwhat of þ con-  
veyaunce & course of the milke into the  
Womans brestes: for there is great affi-  
nitie , communite , and familiarite be-  
tweene the Matrix & the brestes , whi-  
ch naturally do perceave and feele a-  
none when the matrix hath conceiued,  
and then begyn they to brue & to make  
ready their part, agaynst the tyme that  
the Matrix hath aldone her part, that  
is, agaynst the chylde be borne. The  
mylke whiche commeth to the brestes,  
is engendred of the Termes (according  
to the most mens opinions.)

But

But to knowe whiche way the sayde  
Terme shoulde attayne from the ma-  
trix to the breastes, ye shall vnderstand,  
that the uppermost and greatest bayne  
of the seconde division, spoken of in the  
xiiij.chap. where it attaineth the hockle  
bone, redye to passe out of the holonesse  
of the belly into the thigh, before that it  
perce the bell called peritonium, it sendeth  
forth a notable baine braunche, which  
from hence mounteth vpwarde along  
the belly betwene the right muskle and  
the ouerthwart, til it come a litle aboue  
the nauell, where the extreme or upper  
ende thereof divideth it selfe in many  
folde little braunches, meetyng and en-  
termingling them selues with the ex-  
treme little braunches or slippes of ano-  
ther lyke bayne, descending from the  
uppermost chestbone, downe along the  
inside of the chest, and the insyde of the  
upper part of the belly, vntyll it meeete  
with the foresayde mounting bayne, a  
litle aboue the nauell.

And ye shall note, that this bayne  
Hij braunche

branche proeadyng from vena cava, at  
the highest chesbone downward along  
the inner side of the chest or brest, by the  
way as it passeth, it yeldeþ certayne  
little slippes and small braunches of it  
self betwene the ribbes into the brestes.  
Wherfore the consent of all aucthours  
is, that by the meanes of these descen-  
ding bayne braunches at both sides of  
the bodye, & the other ascending bayne  
braunches on both sides of the bellye,  
there shoulde be great communitie and  
fellowship betweene the brestes in Wo-  
men, and the Matrix or the womb.

For doutlesse by common expeience,  
ye may see that when þ tyme of concep-  
tiō in Women is, & that by this meanes  
the termes be stopped, then as the ter-  
mes do deminise & ware lesse, so doth  
the mylke in the brestes encrease and  
ware every day more & more, as who  
might say that the superfluitie of blood  
wonte at other tymes to boyde in the  
name of Termes, now at this tyme by  
the prudencie and prouisiō of nature, is  
retay-

retayned as no superfluitie, but rather  
a necessary humour, reverted and desti-  
nate another waye, that is to saye, sent  
from the baynes of the Matrix parte  
thereof vpwarde by the forenamed as-  
tendyng bayne branches, at their han-  
des agayne received and naturally at-  
tracted by the other descendyng brest  
baynes, through whom it is carped in-  
to the brestes, where by newe naturall  
circulations it is digested into Whyte  
milke, being before red blood, redy now  
prepared to noryshe the chylde When  
nature shall sende it into the worlde.

Agayne, so long as the Woman ge-  
ueth sucke to the chylde, & hath store of  
mylke in her brestes, her termes be of  
very little or no quantitie. These be evi-  
dences that there shoulde be great fami-  
liarite betweene the Matrix and the  
brestes, for somuch as the ebbing of the  
one, is the flowyng of the other: where-  
fore Phisitions sometimes, when the  
flowres issue more vehemently then ne-  
deth, they set boxyng glasses vnder the  
**H** iij      **brestes,**

brestes, meanyng thereby to reuert and  
returne bywarde , the matter enclined  
to much downewarde, the which prac-  
tise how much it preuayleth, I wyl not  
here dispute . Yet in this matter to dis-  
cisse the very veritie as neare as reason  
and the knowledge of Anothomie will  
geue leauue, ye shall not vnderstande my  
sayinges that I shold meane that al-  
wayes when the termes stop beneath  
by anye colde, thought , or other occasi-  
ons , by and by the same blood to stye  
and mount vp into the brestes , & there  
to become mylke : for the contrary here-  
of is dayly seene . For most commonlye  
they in whom these termes do stop, for  
any other cause then conception, the su-  
perfluous blood retayned in the bodye,  
and in the baynes wandring , causeth  
to the partie great headache , taketh a-  
waye their stomatke , and engendreth  
divers other inconueniences, neither in  
the meane whyle is there any thing the  
more mylke in the brestes .

Wherfore ye may wel saye, that the  
cause

cause of plentie of mylke in þ Womans  
brestes in tyme of her being with childe,  
and much more afterwarde , commeth  
chiefly by a priuie naturall instinctiōn,  
wherby it is geuen unto the brestes at  
that tyme more then at anye other , to  
draw unto it selfe greater abundance  
of blood , conuertyng and alteryng the  
same by the propertie of the place , into  
conuenient mylke .

It is not a sufficient cause to replenishe  
the brest the Termes to be by any occa-  
sion stopped beneath, but there must al-  
so concurre the attractive power, inset  
in the brestes to drawe the sayde blood  
(matter at other times of the Termes)  
Without which attraction, be the Ter-  
mes never so long stopped, yet shall the  
brestes be nothing the fuller, if it chānce  
that this attractive power halte or be  
not able to attract sufficient matter to  
make mylke vpon for the Infant, then  
Physitiōs are wont to helpe the debilitie  
of nature , with cupping glasses set vpon  
or vnder the brestes, or els with gen-  
tle

The first booke.

cle attractiue emplasters applied to the  
same places.

And although that into the brestes  
do resorte greate store of other baynes,  
some descending from the vaines of the  
shoulders, & other some from þ vaines  
passing by the armeholes into the ar-  
mes and handes, the which in moyson  
and notable bignesse, muche surmount  
the quantitie of the aboue named des-  
cendyng brest baynes, as it maye ap-  
peare evidently in many women which  
haue these baynes appearing in the su-  
perficie of their brestes immediatly un-  
der the skin, very conspicuous and sight-  
ful: yet notwithstanding it is thought  
by strong conjectures, that the mylke  
in the brestes should be engendred only  
vpon the blood mounting from the a-  
foresayde ascendyng Matrix baynes,  
and not vppon the blood conteyned in  
the other baynes, howe conspicuous so  
ever they be, so that the blood in them  
comprehended, seruech onlye to the  
nourishment of the substance of the  
brestes

The first booke. Fol. xlviij.

brestes them selues, & not to the main-  
tenaunce of the mylke.

To declare here curiously the maner  
that nature vseth in circulatyng of the  
attracted blood, wherby alterations is  
made from one colour to another, wold  
require a longer processe, the which for  
breuitie we will omit at this time, with  
many other problemes, doubtes, and  
difficulties concernyng the same. And  
so we make an ende of this first booke.

# The first booke.

**C** The declaration by letters, of the figures solowyng,  
wherein be set foorth to the eye, every part in wo-  
man, mentioned in this booke before: Whiche in  
the former printinges hath ben corrupted,  
but nowe truely set foorth.

**C** The first figure of the partes of women, with  
the declaration and caracters of the same.

**M** this first figure is  
set forth the tronke or  
stocke of a womans  
body, laid on y groud,  
whose peritonium is  
opened with the mus-  
kels of the Abdomen,  
and turned ouer tow-  
ard y inside, according  
to the vse of cutting, &  
afterwarde we haue  
cut away all the bowels or entrayles from Me-  
senterium, the strayght entrayle beyng yet left  
in the bodye, with also the whole Mesenterium,  
whose pannicles we haue here somewhat taken  
awaye, and set a portion from the other, that  
the nature of Mesenterium might come to lyght,  
but this present figure is for this cause principal-  
ly declared and set foorth, that it myght shewe  
the position of the matrix or wombe, and the  
bladder, as in this woman it is seene, no part  
of the sayde matrix or wombe beyng moued.  
For here is as yet no pannicle pluckt away from  
the matrix or wombe, but that all thinges are  
here yet whollye seene, lykewyse as in women  
some-

somewhat fat they do appeare to the cutter, the bowels beyng taken away. For women are so fatte, that when they be vexed and kyld with long sicknesse, and become moste leanest, then they shewe no kynde of processe of vessels, vniuersall the pannicles or thinne couerynges be seperated a sunder.

A.B.C.D. The inner face or part of the former seate of Peritonium.

E E A part of Mesenterium, knitting the thynne intrayles to the backe.

FF Here is noted another pannicle of Mesenterium, plucked from the other which we haue mar ked with G and G. But both the pannicles do shew the order of the vessels of Mesenterium, and order of the karnelles put betweene the distributions of the vessels.

H H In this part of Mesenterium, the entraile Colon was committed and set to, where it was next to the straight gut.

I And in this part of Mesenterium, did consist and stande the beginning of the intrayle Colon, or his continuauice with the thynne intrailes, and also the blynde gut.

K The straight gutte beyng there cut of where Colon dyd ende, whiche seate or place is ryght agaynst the place of the knitting together of the hockle bone with the lowest turninge ioynte of the loynes.

L The former seate of þ bottome of the Matry, from whence is nothing perceyued pluck away.

M The right stone or testicle in a woman.

N The

# The first booke.

N The lefste stome of a woman, and the former part of this is here entirely seene, although there be of the ryght but a small portion perceyued, and it is for this cause, that we haue in such manner set foorth the right stome: for both the testicles are couered with a pannicle, whiche pannicle bryngeth downe the seede vesselles of a woman, whiche do spryng from peritonium: but we haue vncouered the lefste testicle of that pannicle, with the hande onlye without any knyfe, leauyng the ryght as you see. For this pannicle doeth not growe to the former seate of the testicle in anye parte thereof, but lyeth there onlye.

O A pannicle springing and growyng foorth from the right seate of peritonium, & committing the ryght testicle with the seede vesselles on this side, and those vessels whiche infolde the higher seate of the Matrix to the backe, containing together the Matrix or wombe, and afterwarde with the pannicle of the other side, constituting the seconde cote of the Matrix.

P This way in the foresayde pannicle, runne foorth fleshy fibres or thynne skynnes, constituting the ryght Muskle of the Matrix or wombe.

Q With these karacters, the pannicle of the left syde is noted, whiche is correspondent and lyke to that pannicle, which the foresayd O did poynt to vs.

R S The former part of the necke of the Matrix, couered as yet; betwene R and S with that cote  
which

which þ partes of peritonium offer vnto it, which bring soorth vessels vnto it, and from it, and do knitte it to peritonium: but the space beyng betwene R and S doth shewe the largenesse of the necke of the Matrix. And the wrynkles whiche are seene here, are they whiche the necke of the Matrix fallyng into it selfe, not stretched soorth agayne, doth shewe in the cutting.

T The bladder whose hinder part is here chiefe-lye seene, for we haue so caste our eye in the declaration and setting soorth of this figure, as though we woulde principally beholde in the body beyng prostrate and layde along, the hinder seate of the bladder, whiche loketh towarde the Matrix.

For yf ye wyll suppose and imagine this bodye of a woman, to be set bryght as that whiche next foloweth, ye shoulde thinke otherwyse then the thing is, that the bottome of the Matrix is set soorth much higher then the bladder.

V This is a portion of the nauell, deliuered in the cutting from peritonium, and tourned ouer together with the vesselles seruynge properlye to the chylde.

X A portion of a bayne goyng from the Nauell to the lyuer.

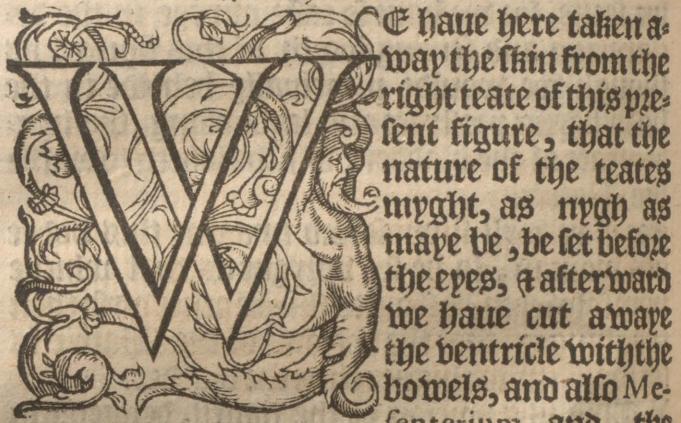

Y A way goyng from the hyghest seate or place of the bottome of the bladder pertaynyng vnto the Nauell, and bryngyng from thence the brine of the chylde, betweene his seconde and the innermost infolder.

Shew

# The first booke.

Ket & She w two artires creeping forth hyther from the Nauell, by the sides of the bladder , and graft in or continued in this place, to the braunches of the great artire , going principally to the holes of the bones aboue the priuie members.

**C** The declaration of the seconde figure of the members of women, and of the karacters of the same.

**E** haue here taken away the skin from the right teate of this present figure , that the nature of the teates myght, as nygh as maye be , be set before the eyes, & afterward we haue cut awaie the ventricle with the bowels, and also Mesenterium and the spleene , leauing the straignt entrayle in this place unmedled with, as well as we dyd in the figure before . And moreouer , we haue as it were , taken away from the vttermost cote whiche Peritonium gaue unto it , cutting awaie also all the pannicles, that the vessels caryng soorth the substance and matter of seede to the stones, and also the vesselles caryng awaie the seede from thence to the Matrix, should appeare and be seene . Also we haue tourned ouer the bladder downewarde on the leste syde , lykewyse breaking

breakyng the way or conduite whiche beareth forth the brine to it from the ryght kydney, that the insertion of the wayes of bearyng foorth the brine to the bladder myght appeare, and that the bladder shoulde not let the inspection or sight of the Matrix or wombe. Last of all, we haue cutte away from this figure a portion of the bones aboue the priuie members, that the neckes of the Matrix and of the bladder myght the more commodiously be seene.

A A Waynes runnyng foorth oftentymes to the teates, from those wayes whiche are offered to the skynne, whiche is brought ouer the heyght of the shoulder.

B Waynes spryngyng from those baynes whiche are led foorth by the arme hole to the hande.

C The pryncipall body of the teate.

DD Karnels and fatnesse spreade abroade every where on the karnelly body, marked with C.

EFGH The hynder outlyde or insyde of the former seate of Peritoneum outward. For the former region of Peritoneum is here bowed vpward and downeward towarde the syde.

I K Portions of Waynes and also Artyres, cree-  
pyng foorth downeward, vnder the brest bone  
from the throte.

L The gybosyte or swellyng seate of the lyuer.

M The holow part of the lyuer is here also some-  
what seene.

N A small portion or peece of the Wayne going  
from the Nauill to the lyuer.

O The stocke of vna porta is here cut away, with

ii the

# The first booke.

the vesselles brought unto it.

P The holowe bayne.

Q The great artyre.

R The rootes of the artyres going to the ventricle, the lyuer, the spleane, the caule, and to the bowelles.

S The begynnyng of a bayne infoldyng the fat coate of the left kydney.

T The bayne and artyre whiche bryngeth the whayishe humour to the ryght kydney.

V The bayne and artyre whiche bryngeth the whayishe humour into the left kydney.

X The begynnyng of the bayne going into the fatte coate of the ryght kydney.

Y The former seate of the ryght kydney.

Z The former seate of the left kydney.

aa The way that bryngeth the brine from the ryght kydney into the bladder, but at the nethermour a is broken away but the portion that is left of this way, and is continued to the bladder, marked with b.

b The way that caryeth foorth the brine from the ryght kydney into the bladder.

cc The way that caryeth foorth the brine from the left kydney into the bladder.

dd The ryght seede bayne, whose begynnyng the hygher d doth shewe.

e The seede bayne going to the left testicle.

f The spryngynge foorth of the artyres of seede.

g The ryght seede artyre.

h The left seede artyre.

ikl The former part of the bottome of the Matrix,

trix, and i sheweth the ryght blunt angle or corner of the sayde bottome, where k sheweth the left, but l sheweth the region or place of the matrix, where the mouth of his bottome consylsteth, and where his necke begynneth.

m This is the strayte gut. And that I may the lesse burden both the sydes of this figure with many letters, I wyll at this present affixe the Baracters but on the one syde only.

n A portion of the bayne and artyre of seede, whiche do go to the vpper syde of the bottome of the wombe.

o Portions of the baynes and artyre of seede goyng to the testicle, and there ioynynge and going together, and constituting.

p A body lyke the spire of a steeple, and this letter p doth poynct vs the roote or foundation of this body, whereas the sayde roote or foundation is committed and ioyned to the testicle.

q From that sayde body such vessells runne forth into the tunicles, commytyng and ioynynge the testicle to Peritonium.

r The former face or part of the testicle.

s The begynnyng of the vessell whiche beareth foorth the seede from the testicle into the Matrix.

tt The bowinges and turninges ouer agayne of the vessell whiche beareth foorth the seede, which turnynges the sayde vessell maketh round about the sydes of the testicle.

v The goyng foorth of the vessell whiche caryeth foorth the seede of the Matrix.

# The first booke.

xx The necke of the Matrix.

y Vesselis foldyng in the lower seate of the bot-  
tome of the Matrix or wombe, and the necke al-  
so of the same.

z A bayne commyng from those vesselles to the  
bladder, whiche vesselles do folde and wynde in the  
necke of the Matrix, and this Karacter also no-  
teth the insertion of the wayes of the brine.  
 $\mu$  The hynder seate of the bottome of the blad-  
der.

r The Muskle of the necke of the bladder.

s In this seate the necke of the bladder is im-  
planted into the necke of the Matrix.

t Small skinnie portions of fleshe of the necke  
of the mouth or openyng of the wombe or Ma-  
trix, and the small hyllockes of the Matrix, with  
the mouth or openyng of the necke thereof,  
neede here no speciall declaration with Karac-  
ters.

u The roote of the Artire, goyng into the low-  
est part of Mesenterium.

v Vesselis which do ascende and ryse vpwarde to  
the muskles of the Abdomen, from the waynes  
and Artyres whiche do go into the legge.

## C The declaration of the Karacters of the thirde figure of women.

**H**is present figure sheweth the ma-  
trix or wombe, with the thynne co-  
uerynges whiche do bynde it to *Peri-*  
*tonicum*, cut soorth from the bodye, and the

The first booke. Fol. xlviij.

the necke therof is here so folded together, and turned ouer, that the mouth or openyng of the bottome of the matrix doth here manysellye shewe it selfe. And we haue lykewyls so opened the bottome and the necke of the bladder, that the holownes of the same, with the insertion of the wayes of brine, are here manysellye sene.

A The former face of the bottome of the matrix, being not yet vncouered of any pannicle.

B B The necke of the matrix.

C A parte of the bottome of the matrix, swel-lyng foorth into the vpper seate of the necke of the matrix, in maner of a kynell.

D The mouth of the bottome of the matrix.

EE A pannicle knitting the matrix to *Peritoneum*, and conseruynge his vesselles.

F The left testicle of the matrix.

G The bayne and artire of seede.

H Portion of the seede bayne and artyre, com-mynge to the vpper seate of the bottome of the matrix.

I A portion of the seede bayne and artyre, com-mynge to the testicle.

K The vessell carrying the seede from the testicle into the matrix.

L The holownesse of the bladder.

M The insertion of the wayes of the brine.

N Here hangeth forth a lytle peece of the wayes of the brine:

# The first booke.

## C The declaration of the characters of the fourth table of women.

B →  
P. 149.

Mall braunches running  
soorth into the pannicle, where  
they are committed and ioyned  
to Peritonium.

A portion of the vayne and  
artire going into the testicle, fal-  
lyng to the vpper seate of the bottome of the ma-  
trix.

The commixtion and goyng together of the  
seede vayne and artyre, that is lyke the spire of  
a steeple, whiche we lyken to the braded baynes  
called Varices.

The left testicle.

The vessell carrying soorth the seede from  
the testicle into the matrix.

The blunite angle or corner of the bottome of  
the matrix, in whom the vessell that bryngeth  
soorth the seede attempteth his insertion.

In this seate the bottome of the matrix is  
ended into the necke thereof, and in this region  
or place is the begynnyng of the mouth or ope-  
nyng place thereof.

The necke of the Matrix or wombe.

Here the necke of the bladder is brought forth  
into the necke of the matrix, and there endeth.

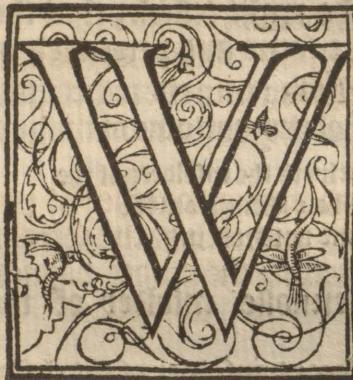

Those are vessels infolding the nether seate of  
the bottome of the matrix, and also his necke.

The swellyng brymmes at the mouth of the  
necke of the matrix.

The

vii The wayes that bryng the brine from the  
raynes into the bladder.

**C** The declaration of the Karacters of the. v. vi.  
vii. and. viii. figures.

Chauue nowe diuided  
this systh table of the  
wombe or Matrix ,  
conteynyng a male  
chylde on the former  
syde, with a long sec-  
tion or cut, and ano-  
ther whiche are over-  
thwart slytte, remo-  
uyng and taking a-  
waye into the sydes,

partes of the coates of the bottome of the ma-  
trix, yea, even from the vttermost infolder of the  
chylde.

ABCD The inner syde of the sayde infolder of  
the matrix, whiche before the section was  
brought about and couered with the infolders  
of the chylde.

EE The vtter syde of the matrix, and the hygh-  
er E noteth the top or the ryght angle or corner  
of the matrix, brought foorth vpwarde and to-  
ward the ryght syde, more then toward the left,  
because it is a man chylde which is in hys wombe.

F The syrste or the vttermosse infolder of the  
chylde.

GG The seconde infolder of the chylde is here  
I iiii also.

# The first booke.

also a great part seene.

H A part of the necke of the matrix, to whom  
in the other syde we haue left growyng to it a  
bayne and an artire, whiche is pryncipally di-  
stributed into the lower leate of the bottome of  
the matrix.

I Here is also yet left the ryght testicle, that the  
situation of it myght be seene and perceaued in  
women beyng with chylde.

C The syre table sheweth the infolders of the  
chylde, taken whole away from the  
Matrix, and not broken.

K **E** H E bttermoste infolder of the  
chylde.

L L The second infolder of the child,  
whiche forsomuche as it is trans-  
pernaut in maner of a pannicle,  
it suffereth the chylde (bewrapt within this third  
infolder) in it somewhat to be seene.

In the seventh table we haue diuided the bt-  
ter and the seconde infolder of the chylde, with a  
longe section or cutte, and we haue here exprested  
and shewed soorth both the sayde infolders, taken  
away from the thirde infolder, and the thirde in-  
folder also yet whole.

M M The thyrd or the immoste infolder of the  
chylde, whiche because it is so thinne that one  
maye easlye see through it, the fourme of the  
chylde lyng therein, somewhat sheweth hym  
selfe to the eyes,

N The

# The first booke.

Fol. I.

N The proceedingyng or order of waynes and Artires, goyng to the Mauyll from the fyrt infolder of the chylde.

OPOP The seconde infolder of the chylde.

And OO shewe his insyde, where PP sheweth his bitter syde.

QR The fyrt infolder of the chylde, where Q noteth the outsyde, and R the insyde, but the proceedingyng and order of the vesseles by the seconde and the thyrd infolder, are perfectly knownen without any helpe of the Baracters.

ND the eyght Table expresseth the chylde delyuered from al his coates, and so it sheweth hym lyng, by the wonderfull prouidence of nature, not as the common opinion of the bulgar sorte of wryters affirmeth, but as you may here see in these figures, & so doth it lye in the middest of the wombe. For it is mosle vntrue that the chylde doth lye in the wombe rounde, lyke as it were bowed, so that the knees shoulde touche to the face, but as he is set here in the viii. figure. And obseruyng this true situation of him, you shall fynde commonly none other situation of the chylde, nor ioyning of any ioynt of hym therein, then is here expressed.

But in this figure MMNOPOPQ&R do note the same as in the seuenth Table, saue that M and M do shewe the insyde, or inner part of the thyrd infolder. But S sheweth here priuately the goyng foorth of the vesseles of the Mauyll

# The fyfth Booke.

Maryll, whiche is betweene the Maryll and the  
joynynge together of the vespells with the thyde  
infolde, which is also brought foorth with a  
great space betweene the shewyng, where be  
certayne (as it were) knottes or swellynges,  
accordyng to the number of the whiche knot-  
tes more or lesse, Mydwyues foolyslye do pro-  
phelie eyther many or fewe chyloden to the wo-  
man, whiche of the learned men is taken but  
for a very fantasye, and worthye of reprehenti-  
on. And moreouer, when the chylde commeth  
foorth (as it chaunceth sometymes) hauyng  
that about his necke, they say that it is the  
same chyldes destynye to be hanged, with many  
other foolyshe conceytes, rather to be laughed  
at, then to be beleued.

## The declaration of the Karacters of the nynth figure of women.

**A**ND the ny nth figure sheweth  
the matrix cut foorth of the bo-  
dye, beyng of that bygnelle as it  
was seene taken foorth of a wo-  
man at the laste Anothomye  
which I did see at the vniversitie  
of Padua in Italie. And moreouer we haue so  
diuided and cutte asunder the bottome of the  
Matrix by the myddle, that the concavitie and  
hollowe bought within the same myght be  
perceaued, and the thycke substance also of  
both the coates of the Matrix in women, when  
they

they be not with chylde.

AABB The concavitie and holow bought of the bottome of the matrix.

CD A line somewhat after the maner of a seame called in Latine Scortum, which doth belong to the place wherein the testicle doth lye, whiche swelleth somewhat soorth into the bought of the bottome of the matrix.

EE The thicknes of the inner and proper coate of the bottome of the matrix.

FF A portion of the innermer bottome of the matrix, swellyng soorth downewarde from the hygher seate of the matrix, into the holownesse and bought of the bottomie.

GG The beginning of the necke or opening place of the bottome of the matrix.

HH The seconde or vthermer infolder of the bottome of the matrix, descended from Peritonium.

II Here we haue reserued a portion on both the sydes of the thynne couerynges, descended from Peritonium, and conteyning the matrix.

K Here is also seene the substancialle of the necke of the matrix, because the cuttyng wherewith we diuided the bottome of the matrix, was begun at this place.

L A part of the necke of the bladder, implaned into the necke of the matrix, castyng soorth into it the brine. The swellyng partes of Abdomen and whatsoeuer is els to be consydered thereof, they may be sufficently knownen without direction of Baracters.

FINIS.

## The second Booke.

¶ Of the tyme of byrh. And whiche is called  
naturall or unnaturall  
Cap.i.

**P**¶ the first booke we haue  
sufficientlye set foorth and  
described the maner, situa-  
tion, & fourme of the Ma-  
trix wherin man is con-  
ceaued, with dyuers other matters ap-  
pendyng and concernyng the better un-  
derstandingyng of the same. And nowe  
here in this seconde Booke, we wyll de-  
clare the maner of the quytynge and de-  
liveraunce of the Infant out of the mo-  
thers wombe, with other thinges ther-  
to appertaynyng. And first here in this  
Chapter we wyl declare the tokenes and  
signes whereby ye may perceave whe-  
ther the tyme of labour be neare or not:  
For When the houre of labour appro-  
cheth neare, these signes folowing euer-  
more proceade and come before.  
First certaine dolours and paines be-  
gyn to growe about the guttes, the na-  
nyll, and in the raynes of the backe, and  
like-

Tokens to  
know when  
the tyme of  
deliueraunce  
is neare.

The second booke. Fol. lit.

lykewyse about the thyghes, and the other places beyng neare to the priue partes, which lykewyse then beginneth to swell and to burne, and to expell humours, so that it geneth a playne & evident token that the labour is neere.

But ye shall note that there is two maner of byrthes, the one called naturall, the other not naturall. Naturall byrh is, when the chylde is borne both in due season, and also in due fashion. The due season is most commonly after the ninth moneth, or about fortie wekes after the conception, although some be delivred sometimes in the seventh moneth, and the chylde proueth very well. But such as are borne in the eyght moneth, other thei be dead before the birth, or els live not long after.

The due fashion of birth is this: first the head commeth forwarde, then foloweth the necke & shoulders, the armes with the handes lying close to the body towardes the feete, the face and forepart of the chylde beyng towardes the face and

The second booke.

and forepart of the mother, as it appeareth in the fyre of the byrth figures. For as hath ben sayde alredye in the fyre booke, before the tyme of delyuerance, the chylde lyeth in the mothers wombe the head vpward, and the feete downeward, but when it shoulde be deliuered, it is turned cleane contrarye, the head downeward, the feete upward, and the face towardes the mothers bellye, and that yf the byrth be naturall. Another thyng also is this, that yf the byrth be naturall, the delyuerance is easie without long taryng or looking for it.

The byrth not naturall is, when the mother is delyuered before her tyme, or out of due season, or after anye other fashyon then is here spoken of before : As when both the legges proceede first, or one alone, with both the handes up, or both downe, other els the one up and the other downe, and divers otherwise, as shalbe hereafter more clearely declared.

Of

The second booke. Fol. lxx.

¶ Of easie and vneasie, difficult, or dolou-  
rous deliueraunce, and the causes of it:  
With the signes howe to knowe  
and foresee the same.  
Cap. ii.

**M**any be the perylles,  
daungers, and thronges,  
which chaunce to women  
in theyr labour, whiche al-  
so ensue and come in divers  
wayes, and for dyuers causes, suche as  
I shall here declare.

Many perils  
chaunsing  
to women  
in theyr la-  
bour.

Fyrist when the woman that labou-  
reth is conceaued ouer young, as before  
xii. or xv. yeres of age (whiche chaun-  
seth sometyme, though not very often)  
and that the passage be ouer anguste,  
streate, or narowe, other naturallye, or  
els for soime disease and infirmitie, whi-  
che may happen about the parte, as  
apostumes, pushes, pyles, or blysters,  
and suche other. Through the whiche  
causes, nature can not (but with great  
dolour and payne) open and dilate it  
selfe, to the expellyng and deliueraunce  
of

The second booke.

of the chylde. And sometime the vesicke  
or bladder, or other intrayles beyng a-  
bout the Matrix or Wombe, be also a-  
postumate and blistered, Whiche beyng  
greened, the Matrix or Wombe likewise  
for vicinitie and neighbourhead is gree-  
ued with them, & that hindereth great-  
ly the deliuernace. Also sometyme in  
the fundement are humorhodes or pil-  
les and other pushes, chappynges or  
chynes, whiche cause great payne. Also  
hardnesse and difficultie or byndyng of  
the belly, whiche thinges for the greefe  
and payne that ensueth of them, cau-  
seth the woman to haue lytle power to  
helpe her selfe in her labour.

Furthermore, yf the partie be weake  
and of feble complexion, or of nature ve-  
ry colde, or to young, or very aged, or ex-  
ceedyng grosse and fatte, or contrary-  
wyse to spare and leane, or that she ne-  
uer had childe before, or that she be ouer-  
timorous and fearefull, dyners, Way-  
warde, or such one that wyll not be ru-  
led, remouyng her selfe from one place

to another , all suche thynges causeth  
the labour to be muche more paynefull,  
cruell and dolorous , then it woulde o-  
therwyse be . Also ye must understande  
that generally the byrth of the man is  
easier then the byrth of the female .

Item , yf the chylde be of a fuller and  
greater groweth , then that it maye easly  
pasle that narowe passage , or contrary-  
wise , yf it be so faint , weake and tender ,  
that it can not turne it selfe , or doth it  
very slowly , or if the woman haue two  
chyldren at once , other els that it with  
the whiche she laboureth , be a monster :  
as for example , yf it hath but one bodye  
& two heades , as appeareth in the .xvii.  
of the birth figures , such as of late was  
seene in the dominion of Werdenbergh .

Agayne , when it proceedeth not in  
due tyme , or after due fashyon , as when  
it commeth foorth with both feete or  
both knees together , or els with one  
foote onlye , or with both feete downe-  
wardes , and both handes uppwardes ,  
other els (the whiche is most perillous )

K j sidelong,

The seconde booke.

sidelong, arselong, or backlong, other  
els (having two at a byrth) both pro-  
ceede with their feete fyrt, or one with  
his feete, and the other with his head,  
by thole and dyuers other wayes the  
Woman sustayneth great dolour, paine,  
and anguyshē.

Item, yf the Woman suffer abor-  
ement, that is to saye, bryng foorth her  
childe in the .iii. or .v. moneth after the  
conception, Whiche is before the due  
tyme, in this case it shalbe great Payne  
to her, for so muche as in that tyme, the  
porte of the Wombe is so firmely and  
strongly enclosed, that vnneth the point  
of a needle may enter in at it.  
Also if the child be dead in the mothers  
belly, it is a very perillous thing, for so  
much as it can not be easily turned, ney-  
ther can it welde or helpe it selfe to come  
forth, or if the child be sicke or weakened  
so that it cānot for feblenes helpe it selfe.

To knowe  
whether the  
chylde be  
weake in  
the mothers  
belly.

The which thing may be foreseen and  
knowen by these tokēs: If the Woman  
With chylde haue ben long sicke before  
her

her labour, yf she haue ben sore lasked, if  
after her conception she haue had dayly  
and vnlwontly her flowres, yf strayght  
after one moneth vpon the conception,  
her brestes yelde any mylke, if the childe  
stirre not, ne moue at suche tyme as is  
conuenient for it, these be argumentes  
and tokens that it shuld be very weake.  
By what tokens ye shall knowe it is  
dead, I shall shewe you hereafter.

Also there is great peril in labouring, peril in the  
o-secondine. When the secondine or latter birth is o-  
uer fyrm or strong, and wyll not soone  
riue or breake a sunder, so that the child  
may haue his easy coming forth. And  
contrarywyse, when it is ouer weake,  
slender or thin, so that it breaketh a sun-  
der before that the chylde be turned, or  
apt to issue forth, for then the humours  
whiche are collect & gathered together  
about this secondine or seconde byrth,  
passe away soner then they shoulde do,  
& the birth shal lack his due humidities  
and moistures, whiche shuld cause it the  
easelyer to proceede, & with lesse paine.

Kij The

The seconde booke.

Eccesse of  
heat or cold  
greatly hin-  
dereth the  
labour.

The birth also is hyndered by ouer-  
much colde, or ouermuche heate, for in  
ouermuch colde, the passage and all o-  
ther powers of the labouring woman,  
be coarcted and made narower then  
they woulde otherwyse be. Lykewyse  
ouer much heate debiliteth, weakeneth  
and faynteth both the woman and the  
chylde, so that neither of them in that  
case, can well weld or helpe them selues  
for fayntnes.

And farther yf the woman haue vsed  
to eate comonly suche meate or fruities  
which do exiccate or drye, and constraine  
or binde, as Medlars, Chestnuts, and  
all sowre fruities, as Crabbes, Choke-  
peres, Quinces, and such other, with  
ouer muche vse of Vergens, and suche  
lyke sowre sauces, with Rose, Milt, and  
many other thinges, al this shall great-  
lye hinder the byrth.

Also the vse of colde bathes after the  
fifth moneth folowyng the conception,  
or to bathe in such water wher Alome  
is, Iron, or Salt, or any suche thynges  
whiche

Whiche do coarcte and constraine, or yf  
she haue ben ostentynies heauye and  
mournyng, or yll at ease, or yf she haue  
ben kepte ouer hungry and thurstie, or  
haue bled ouer much watch and wal-  
kyng: eyther if she bled a little before her  
labour thinges of great odour, smell  
or sauour, for suche thynges (in many  
mens opinions) attract and draue up-  
ward the mother or Matrix, the which  
is great hynderaunce to the byrth.

Also yf the woman feele Payne onlye  
in the backe and aboue the nauell, and  
not vnder, it is a signe of harde labour:  
lykewyse if she were wont in times pas-  
sed to be deliuered with great payne, is  
an evidence and lykelyhod of great la-  
bour alwayes in the birth.

Nowe signes and tokens of an expe-  
dite and easly deliueraunce, be suche as  
be contrary to all those that haue ben  
rehearsed before. As for example, When  
the woman hath ben wont in tymes  
passed easly to be deliuered, and that  
in her labour she feele but litle throng

Tokens of  
easy deliu-  
raunce.

The seconde booke.

or dolor, or though she hane great paynes, yet they remayne not styll in the vpper partes, but descend alwayes downewardes to the neather partes or bottome of the belly.

And to be short, in all painefull and troublesome labours, these signes betoken and signifie good sped and lucke in the labour: vnquietnes, muche stirring of the chylde in the mothers belly, all the thronges and paines tombing in the forepart of the bottome of the belly, the Woman strong and mightie of nature, such as can wel and strongly helpe her self to the deliueraunce of the birth. And againe, euill signes be those, when she sweateth colde sweate, and that her pulces beate and labour ouer sore, and that she her selfe in the labouring faint and sowne, these be unluckie and mortall signes.

To helpe a woman with chylde shall vse her selfe,  
and what remedies be for them  
that hane hard labour.

Capit.iii.

To

**D**o succour and helpe them  
that are in such difficult perill  
of labour, as we haue spoken  
of before, ye muste obserue,  
kepe & marke those things that we shal  
(by the grace of God) shewe you in this  
Chapter folowyng.

First the Woman with chylde muste  
kepe two diets, the one a moneth before  
her labour, the other in the very labou-  
ring. And aboue al thinges she must es-  
chue & forbeare al such occasions which  
may hynder the birth, to the bitemost  
of her power, the whiche occasions we  
rehearsed in the Chapter before. But if  
there be any such thyng which can not  
be auoyded, forsomuch as it commeth  
by nature, or by long continuaunce and  
custome in this case: yet ye shal vse some  
suche remedies, the whiche may some-  
what asswage it, mollifie it, or make it  
more easy or tollerable, so that it hinder  
the birth so much the lesse.

But if it so be, that any infirmitie or  
disease, swelling, or other apostumatio-

B viii chaunce

How the la-  
bour maye  
be made  
more easie.

The seconde booke.

chaunce about the mother or the priuie part, or about the vesike or bladder, as the stone, the strangury, and such lyke, the whiche thinges maye cause suche straynes and coarctation, that vnneth without great and horrible payne, the partie can be deliuered or discharged. In these cases it behoueth such thinges to be loked vnto and cured, before the tyme of labour commeth, by the aduice of some expert Surgeon.

Also if the Woman be ouermuch constipat or bounde, most commonly she must vse, the moneth before her labour, suche thynges the whiche may lenifie, molifie, dissolute, and lose the belly, as apples frysyd with suger, taken fastyng in the mornynge, and after that a draught of pure Wyne alone, or els tempred with the iuyce of swete and very ripe apples.

Also to eate figges in the mornynge fasting, and at night, loseth well the belly. If these profite not, Cassia fistula taken iii.oz.iiiidrams one halse houre before dyner, shall lose the belly without peril.

Againe

Agayne, in this case she must refrayne  
from all such thinges as do harden, re-  
strayne, and constipat, as meates broy-  
led or rosted, and ryce, hard egges, biefe,  
chestnuttis, and all sowre fruities, and  
suche lyke.

Also yf farther necessitie require, she  
may receaue a clyster, but it must be ve-  
ry gentle and easye, made of a pynt of  
the broth of a chickin, or other tender  
fleshe, thereto putting so muche course  
suger or hony, as may make it reasona-  
bly sweete, & halfe a sponefull of Whyte  
salt. Or for the poore woman maye be  
made a clyster of a pint of water, wher-  
in hath ben sod mallowes or holyoke,  
with hony and salt, as before. She may  
vse also some other easy and temperate  
purgation, to molifie and lose her with-  
all, as Mercury sodden with flesh in po-  
tage, and diuers such other, or els a sup-  
positor tempered with sope, larde, or the  
volkes of egges.

And yf it chaunce that (the labour  
drawing neare) she ware faynt or sick-  
lye, Wherwith  
to comfort  
the woman  
in her la-  
bour.

Thinges to  
lose y belly.

## The seconde booke.

Iye, then must ye comfort her with good comfortable meate, drinke, holosome and noble electuaries, and in this time must she do all such thynges the whiche can make her apte and sufficient to her labour, and to vse such thinges the which may lare, open, and mollifie the nature and passage, so that the byrth maye the more freely proceede, and that chiefly in the yonger women. The elder women, for because that those partes in them be somewhat drier and harder, therefore they must vse hot and moist thinges, which haue propertie to lenifie and souple, and that both in meate and dynke, and also in ouerwarde fomentations, bathynges, suppositories, and annoynctmentes.

Dintments  
to souple.

Annoynctmentes Wherewith ye may sople the priue place, be these, Hennes grece, Duckes grece, Goose grece, also oyle Doline, Linseede oyle, or oyle of Fenegreke, or the viscosite of holyoke, and such other: & for dynke, let her vse good rype wine mixed with water: also there

there muste be a consyderation in the  
dieteting of the Woman, that she maye  
vse suche thinges the whiche may moy-  
sten her, and not make her fatte. Con-  
trarywyse, let her auoyde such thynges  
the whiche shoulde exicate, drye, con-  
strayne, or coarct her, and that all the  
moneth before her labour. But about  
ten dayes before the tyme (yf she feele a-  
nye Payne or greefe) let her vse every  
day to Washe or bathe her with Warme  
Water, in the whiche also that she tarye  
not overlong in bathyng for Weakning  
of her, and therein let her stande, so that  
the Water come aboue the nauyll a li-  
tle, and also seathe in the Water Ma-  
lilles, Holyoke, Camomell, Mercurie,  
Maydenheyre, Lyneseede, Fenegreke  
seede, and suche other thynges whiche  
haue vertue to mollifie and sople. And  
yf it be so, that for weakenesse of the bo-  
dy she may not endure this bathyng in  
Warめ Water, then with a spounge  
or other cloth dypped in the foresayde  
bath, let her lokynghly Washe her feete,

Bathes to  
lose & genti-  
lye to open  
the body.

her

## The seconde booke.

her thyghes, and her priue partes, the  
whiche thynges shall greatly profite to  
her. But in such tyme beware ye come  
not in the common hot houses, for they  
would cause you to be feeble and faynt,  
which were yll in this case.

And whan ye are thus bathed or wa-  
shed, then shall it be very conuenient for  
you to annoynct with the foresayde gre-  
ces and oyles, your backe, belly, nauyl,  
sydes, and suche places as are neare to  
the priue partes. Furthermore, it shal-  
be greatly profitable for her to conuey  
inwarde into the priue part these fore-  
sayd oyles or greces with a spunge, or  
other thyng made for the purpose, she  
lying upright, the middes of her bodye  
most hyest, so that it maye the better re-  
mayne within her, and that chiesely of  
the Matrix be drie, other els the partie  
very leane and spare.

It shalbe also very profitable for her to  
suffume the nether places with Muske,  
Ambre, Gallia Muscata, which put on  
embres, yelde a goodly sauour, by the  
which

Annoynct-  
mentes to  
sople.

Sweete  
fumes.

Whiche the neather places open themselfe, and drawe downe warde.

Also as I sayde before, she must take good hede to her diet, that she take thinges the which may comfort and strengthen the body, feeding not ouermuch of any thing, and to drinke pleasaunt and well sauering wine, or other drinke, also moderately to exercise the body in doyng some thing, styrring, mouing, goyng, or standyng, more then otherwyse she was wont to do, these thinges farther the byrth and make it the easier, and this is the maner of diet the which we advise the woman to kepe the moneth before her labour or longer.

Another dyet there is, the whiche she ought to obserue in the tyme of labour, when the stormes and thronges begyn to come on, and the humours which yet hitherto haue remained about the Matrix or mother collected, nowe begynne to flowe foorth, and this maner of dyet consisteth in two sortes. First that suche thinges be procured & had in redinesse,

Whiche

what is to  
be done whe  
the time of  
labour is  
come.

The seconde booke.

Whiche may cause the byrth or labour  
to be very easy. Secondly to withstand,  
defende, and to put awaye so neare as  
may be the instant and present dolours.  
And as touching this poynt, it shalbe  
very profitable for her, for the space of  
an houre to sit still, then (rysing agayne)  
to go vp and downe a payre of stayres,  
crying or reaching so loude as she can,  
so to styrre her selfe.

And also it shalbe verye good for a  
tyme, to retayne and kepe in her breath,  
for because that through that meanes,  
the guttes and intrayles be thrust toge-  
ther, and depressed downewarde. Also  
it shalbe very good to receave some me-  
dicine to prouoke the birth, of the which  
we Wyll speake more hereafter.

Nowe when the Woman perceaueth  
the Matrix or Mother to ware lare or  
loose, and to be dissoluued, and that the  
humours issue foorth in greate plentie,  
then shal it be meete for her to sit downe  
leaning backwarde in maner vpryght.

¶ Of the Mtd.  
wifes stoole. For the Which purpose in some regions  
(as

The seconde booke. Fol.lxi.

(as in Fraunce & Germany) the Mid-  
Wifes haue stoles for the nonce, whiche  
beyng but lowe, and not hye from the  
grounde, be made so compassewyse and  
caue or holowe in the middes, that that  
may be receaued from vnderneath whi-  
che is looked for, and the backe of the  
stoole leaning backward, receaueth the  
backe of the woman: the fashyon of the  
Whiche stoole, is set in the begynning of  
the byrth figures hereafter.

And when the tyme of laboure is  
come, in the same stoole ought to be put  
many clothes or cloutes in the backe of  
it, the which the Midwife may remoue  
from one side to another, according as  
necessitie shall require. The Midwife  
her selfe shall sit before the labouryng  
Woman, and shall diligently obserue  
and wayte, how much, and after what  
meanes the chylde styrreth it selfe: also  
shall with her handes, fyrt annoyn-  
ted with the oyle of Almondes, or  
the oyle of Whyte Lillies, rule and dy-  
rect every thing as shall seeme best.

Also

## The seconde booke.

The Midwyfe  
must  
geue com-  
fortable  
wordes to  
the partie  
trauayling.

Also the Midwyfe muste enstruct and comfort the partie, not onlye refreshing her with good meate and drinke, but also with sweete wordes , geuyng her good hope of a spedefull deliueraunce, encouraging and enstomakynge her to patience and tolleraunce, byddyng her to holde in her breath so muche as she may , also strckyng gentilly with her handes her belly aboue the Nauell, for that helpeth to depresse the byrth downewarde.

But and ys the Woman be any thing grosse, fat, or fleshy, it shalbe best for her to lye groueling, for by that meanes the Matrix is thrust and depressed downewarde , annoynting also the priuie partes with the oyle of white Lillies. And ys necessarie require it , let not the Midwyfe be afraide ne ashamed to handle the places, and to relaxe and loose the straigtes, (for so muche as shall lye in her) for that shal helpe well to the more expedite and quicke labour.

But this muste the Midwyfe aboue all

The second booke. Fol. lxiii.

all thynges take heede of that she com-  
pel not the woman to labour before the  
byrth come forward, and shewe it selfe.  
For before that tyme, all laboure is in  
bayne, labour as much as ye lyste. And  
in this case many tymes it commeth to  
passe, that the partie hath laboured so  
sore before the time, that when she shuld  
labour in dede, her myght and strength  
is spent before in bayne, so that she is  
not now able to helpe her selfe, and that  
is a perrilous case.

To labour  
much before  
the due time  
doth but se-  
ble the wo-  
man, and no  
thing profit

Furthermore, when the Seconde  
or seconde byrth (in the whiche the byrth  
is wrapped and conteyned) doth once  
appeare, then maye ye knowe that the  
labour is at hand. Wherfore if the same  
seconde breake not of his owne kinde,  
it shalbe the Midwyfes part and office,  
with her nayles easily and gentellye to  
breake and rent it, or yf that maye not  
conueniently be done, then rayse vp be-  
tweene your fingers a peece of it, and cut  
it of with a payre of sheares, or sharpe  
knyle, but so that ye hurt not the byrth

The second booke.

With the cut. This done, by and by ensueth consequently the flux and flowe of humours, of the whiche I speake before, and then next foloweth immediatlye the byrth.

But yf it so chounce that the Seconde shoulde be cut by the Mydwyfe, and all the watery part issued and spent before due time & necessarie shoulde require it, so that the priuie passage be leste exitate and drye, the byrth not yet apperryng, by this meanes the laboure shoulde be hindered and letted. In this case ye shall annoynt and molifie that priuie passage with the oyle of Whyte Lyllyes, or some of the greases spoken of before, fyrt warmed, and so conneyed into the priuie partes, the whiche thynge wyll cause the waye to be slypperye, souple, and easie for the birth to passe. But cheefely in these difficulties shoulde profite the Whyte of an egge, together with the volke powred into the same place, whiche shoulde cause it to be most slypperye and slydyng, and supplye the roome

The second booke. Fol. lxiii.  
roome of the natural humidities spent  
before.

And yf it be so, that the byrth be of a  
great growth, and the head sticke in the  
commynge foorth, then muste the Myd-  
wyse helpe all that she may, with her  
hande fyrt annoynted with some oyle,  
openyng and enlargyng the way, that  
the issue may be the freer. Lykewyse  
must be done yf she beare two childdren  
at once. And all this is spoken of the  
naturall byrth, when that fyrt procee-  
deth the head, and then the rest of the  
body ordinateley, as ye may see in the  
fyrt of the byrth figures folowing.

¶ ii. But when the byrth commeth not  
naturall, then must the Mydwyse do  
all her diligence and payne (if it may be  
possible) to turne the byrth tenderlye  
with her annoynted handes, so that it  
may be reduced agayne to a naturall  
byrth. As for example: Sometyme it  
chaugeth the chyld to come the legges &  
both armes & handes downward, close  
to the sydes fyrt foorth, as appeareth

The head  
proceedyng  
fyrt.

and other  
crys set to  
actynge

The legges  
& both han-  
des downe,  
proceedyng  
fyrt.

The seconde booke.

in the seconde of the byrth figures. In  
this case the Mydwye must do all her  
payne with tender handlyng and an-  
noyntyng to receaue soorth the chylde,  
the legges beyng still close together, and  
the handes likewise remaynyng, as ap-  
peareth in the sayde seconde figure.

Howbeit it were farre better (if it may  
be done by any possible Wayes or mea-  
nes) that the Mydwye shoulde turne  
these legges commyng fyrt soorth, up-  
wardes agayne by the bellywarde, so  
that the head myght descende downe-  
warde by the backe part of the Wombe,  
for then naturallye agayne and with-  
out peryll myght it proceede and come  
soorth as the fyrt.

The third  
of the byrth  
figures.

Agayne sometyme the byrth com-  
meth soorth with both legges and feete  
fyrt, the handes beyng lyfted vp aboue  
the head of the chylde, and this is the  
perilloust maner of birth that is, as ap-  
peareth in the third of the birth figures.  
And here must the Mydwye do what  
she may to turne the byrth (ylf it may be  
possi-

The second booke. Fol. liii.  
possible) to the first figure, and yf it wyl  
not be, then reduce the handes of it  
downe to the sydes, and so to reduce it  
into the seconde figure. But yf this also  
wyl not be, then receane the feete as  
they come forth, and bynde them with  
some fayre lynnyn cloth, and so tenderly  
and very softly loose out the byrth tyll all  
be come forth, and this is a very ieopar-  
dous labour.

iii. Also sometyme the byrth com-  
meth foorth with one foote onlye, the  
other being left upwarde, as appeareth  
in the fourth figure. And in this case it  
behoueth the labouryng Woman to lay  
her bryght vpon her backe, holdyng  
up her thyghes & belly, so that her head  
be the lower part of her bodye, then let  
the Wydwysse with her hande returne  
in agayne the foote that commeth out  
first, in as tender maner as may be, and  
warne the Woman that laboureth to  
styrre and moue her selfe, so that by the  
mouyng and styrryng, the byrth mays  
be turned the head downeward, and so

The fourth  
figure.

L iii to

## The second booke.

to make a naturall byrth of it, and then  
to set the woman in the stoole agayne,  
and to do as ye dyd in the fyre figure.  
But yf it be so, that notwithstandingyng  
the mothers styrryng and mouyng, the  
byrth do not turne, then must the Mid-  
wyfe with her hande softlye fetche out  
the other legge whiche remayned be-  
hynde, euermore takyng heede of this,  
that by handlyng of the chylde, she do  
not remoue ne set out of theyr place the  
two handes hangyng downewarde to-  
warde the feete.

The fyfth  
figure.

v. Lykewyse sometyme it commeth  
to passe, that the syde of the chylde com-  
meth forwarde, as appeareth in the v.  
figure, and then must the Midwyfe do  
so, that it may be returned to his natu-  
rall fassion, and so to come forth.

The sixt  
figure.

vi. Also sometyme the chylde com-  
meth foorth the feete forwarde, the leg-  
ges beyng abroade, as in the vi. figure,  
and then must the Midwife see, that the  
feete and legges may be ioyned toge-  
ther, and so to proceede and come forth,  
ever-

The second booke. fol. lxv.  
euermore regardyng the handes, as I  
warned you before.

vii. If it come with one of the knees  
or both forwarde, as in the .vii. figure, The .vii.  
figure,  
then must the Mydwyse put vp the  
birth, til such times as the legges & feete  
come ryght forth, & then to do as afore.

viii. When the chylde cometh head-  
long, one of the handes commynyng out The eyghe  
figure.  
and appearing before, as in the .viii. fi-  
gure, then let the byrth proceede no far-  
ther, but let the Mydwyse put in her  
hande, and tenderly by the shoulders  
thruste in the byrth agayne, so that the  
hand may be resettled in his place, and  
the byrth to come foorth ordinateley and  
naturalliy, as in the fyrl figure: But yf  
by this meanes the hande come not to  
his conuenient place, then let the Wo-  
man lye bpryght with her thyghes and  
belly vpwardes, and her head downe-  
wardes, so that by that meanes it may  
be brought to passe, and then bryng her  
to her seate agayne.

ix. But yf it proceede with bothe The ninth  
Lxxiiii. handes figure.

## The second Booke.

handes forwardes, then muste ye lyke-  
wise do as afore, by the shoulders thru-  
styng it backe agayne, vntyll suche tyme  
as the hands lye close to the sides, & so to  
come forth, as apeareth in the ix. figure.

The. x. fi-  
gure.

x. But When it commeth arswarde,  
as in the .x. figure may be seene, then  
must the Mydwife with her handes re-  
turne it agayne, vntyll suche tyme that  
the birth be turned, the legges and feete  
forwarde: other els, yf it maye be so, it  
Were best that the head might come for-  
warde, and so naturally to proceede.

The. xi. fi-  
gure.

xi. And yf so be that it appeare and  
come forth first with the shoulders, as  
in the .xi. figure, then must ye fayre and  
softlye thrust it backe agayne by the  
shoulders, tyll suche tyme as the head  
come forwarde.

The. xii. fi-  
gure.

xii. But When the byrth commeth  
forth with both the handes and both  
the feete at once, as in the .xii. figure,  
then must the Mydwife tenderly take  
the chylde by the head, and returne the  
legges upwarde, & so to receave it forth.

The second booke. Fol. lxvi.

xiii. And when it commeth brestward The. xiii.  
figure. as in the. xiii. figure, the legges and han-  
des bydyng behynde, then let the Mid-  
wyfe take it by the feete or by the head,  
whiche that shalbe moste apt and com-  
modious to come forwarde, returnyng  
the rest vpward, & so to receave it forth:  
but if it may be hedling, that shalbe best.

xiv. Nowe sometyme it chaunceth The. xiv.  
figure. the woman to haue two at a burthen, &  
that both proeede together headlong,  
as in the. xiv. figure, and then must the  
Midwyfe receave the one after the o-  
ther, but so, that she let not slyppe the  
one, whylest she taketh the fyrt.

xv. If both come foorth at once with  
theyr feete forward, then must the Mid-  
wyfe be very diligent to receave first the  
one, and then the other, as hath ben shew-  
ed before.

xvi. When the one commeth head- The. xvi.  
figure.  
long, the other foote wyse, then must the  
Midwyfe helpe the byrth that is moste  
nearest the issue, and it that commeth  
footelong(if she can)to returne it vpon  
the

the head, as is spoken of before, takyng  
ever heede that the one be not noysome  
to the other in receauyng soorth of ey-  
ther of them.

And to be short, let the Mydwye of-  
ten tymes annoynt & mollifie the waye  
and passage with some of the forelayde  
oyntmentes, to make the womans la-  
bour so muche the easier, and haue the  
lesse trauayle and payne. And yf there  
chaunce to be any Apostume or disease  
about those places in this tyme, by suche  
annoynstyng to alaye and swage the  
payne, so that for the tyme it may be the  
lesse greefe to the partie, as I spake be-  
fore also. And for them that be in this  
case, it shalbe best to lye grouelyng, as I  
sayde of the grosse, fatte, and fleshy Wo-  
man.

Remedies and medicines by the which the la-  
bour may be made moze tollerable, easie,  
and without great payne.

Cap.v.

The

The second booke. Fol. lxvii.

**H**e thynges whiche helpe the birth & make it more easie, are these. First the woman that laboureth muste eyther sytte groueling, or els bpright, leaning backwarde, accordyng as it shall seeme comodious and necessary to the partie, or as she is accustomed. And in Wynter or colde weather, the chamber wherin she laboureth must be warmed, but in sommer or hotte wether, let in the aire to refreshe her withall, lest betwene extreme heate and labour the woman faynt and sowne. And furthermore, she must be prouoked to sneesynge, and that eyther with the powder of Eleborus, or els of peper. Also the sydes of the woman must be stroken downewarde with the handes, which thyng helpeth greatly & furthereth. And let the Mydwyfe alwaye be very diligent, prouidyng and seing what shalbe necessary for the woman, annoynstyng the priuities with oyle, or other suche greace as I speake of before, in this fashion.

The

meanes to  
helpe & pro-  
uoke the  
byrth.

## The second booke.

A good mol-  
lifying oint-  
ment. Take the oyle of whyte Lylyes or Duckes  
grese, & with that temper two graynes wayght  
of Saffron, and one grayne of Muske, and there-  
with annoynct the secrete partes. If this profite  
nothyng, then vse this suffumigation.

Take Myrrhe, Galbanum, Castorium, let those  
be beaten, and make lyke pylles of them, tempe-  
red together with busles gall: then take a dram  
of these pylles, and put it on hoate coales, and  
let the woman receaue the fume and sauour of  
it vnderneath.

Another perfume: Take yelowe brymstone,  
myrrhe, Mader, Galbanum, Oppoponacum, of ech  
lyke much, and temper al those together, making  
of them pylles, and with those also ye may make  
fume, to be receaued vnderneath.

Item, the fume of Culuer dung, or of Hawkes  
dung, by putting to of Oppoponacum, is soue-  
raigne for the same. All these fumes open the  
poore beneath, and causeth nature to be the  
freer in delyuerance.

Also it is very good to dyp woll in the tuyce  
of Rue, and the same to conuey into the secretes.  
Also the powder of Aristolochia rotunda, or the  
roote called Bothor martis, Ciclaminus, or malum  
terre, or the seede of Stansagre, any of these  
wrapp'd in woll, and conueyed inwarde, prouo-  
keth and calleth forth the byrth.

Item take Heleborus, Oppoponacum, & wrap  
them together in wooll, and minister them in-  
warde, for that will bryng foorth and prouoke  
the birth, whether it be alyue or dead. Also the  
rynde

The second booke. Fol. lxxviii.

rynde and barke called Cassia lignea beaten to powder, and tempered with wine and drunken, prouoketh well the byrth.

Item Asa fetida, of the bygnes and wayght of a pease, mingled together with Castorium of the wayght of a dram, beaten together and tempered with wine myrt with water, and so drunken, is very good to prouoke the byrth. Also Canell drunken with wine is very good.

Item, take a scruple of Roses, with the wa-  
ter of the seede of Senegreke, Cicerula, May-  
denhayre, all beaten together and sodden, and  
the oyle of blewe flouredelice, a small quanti-  
tie tempered therewithall, and then geue it to  
the woman that laboureth, and it shall pro-  
uoke the byrth greatly. And Cassia lignea and A-  
sa fetida drunken with wine, be very good for the  
same.

Also Holyoke sodden in canduite water and  
drunken, is soueraigne for the same purpose,  
and it is verye good for her to walsh her in the  
water in the which this Holyoke is decocte and  
sodden.

Item, certayne pylles the whiche make the  
labour easie and without payne.

Take Canell, or Cinamome, and Sauine, of  
ech a dram, of Cassia lignea a dram and a halfe, of  
Myrrhe, Aristolochia rotunda, & Costus amarus, of  
ech a dram, of Storax liquida halfe a dram, and of  
Opium the waight of. xii. graynes, beate these  
altogether, & fourme them into pylles, and geue  
unto the woman two drammes of these pylles  
with

## The second booke.

with two ounces of good olde wine.

Item Saffron and Syler montanum prouoketh  
the byrth of any lyuyng thyng, if it be drunken:  
howbeit to a woman geue neuer passing a dram  
at once of Saffron, for greater quantitie shoud  
greatly hurt.

Item, take v. drammes of Sauine, of Rue  
or hearbe grace one dradma and a halfe, of Ju-  
niper beryes two drams, of Asa fetida, Amoniacū,  
Madder, of eache two drammes, of these make  
pylles, geuen to the woman in labour, with  
water in the whiche is sodden Sauine and Peni-  
trall, or els with the broth of Cicercula, and the  
juice of Rue shall helpe very greatly.

Item, take two drammes of Sauine, of Asa  
fetida, Amoniacum and Madder, of eache halfe a  
dram, these temper together in pylles, and geue  
her with wine one dram of the same.

Item, take of Aristolochia longa, Pepper, and  
Myrrhe, of eche lyke muche, confict them toge-  
ther with wine, and make pylles of them, and  
minister them with an ounce of water of the  
decoction of Lupines, these pylles be of suche ef-  
ficacie and strength, that it alleuiateth and vr-  
payneth the byrth, it delyuereth the Matrix or  
Mother from all maner of byrth, be it alye or  
dead.

Item, take of whyte Bedellium, Myrrhe, and  
Sauine, of eche lyke muche, temper these with  
Cassia lignea, and Hony, and make pylles of them  
to the bygnesse of Pearson, and of these pylles  
geue at ech tyme ffe to the labouryng woman,  
which

The second booke. Fol. lxxix.

whiche be of the same myght and strength, that  
the other pylles spoken of here next before are.

Item, take of Myrrhe, Castorium, and Storax,  
of eche one dram, temper them with Honey, and  
make pylles of it: these for this purpose excel all  
passe all other, they be of such vertue and strength  
in operation.

A plaster to prouoke the byrth.

Take wilde Gowarde, and seethe it in water,  
in the same water temper Myrrhe, the iuyce of  
Rue, and Barlye meale, so much as shalbe suffi-  
cient, stampe these thynges together, and make  
it plaster wyse, then lay it to the womans bellye  
betweene the Nayll and the nether part: This  
plaster shall helpe maruellously.

And although many other thynges  
there be which haue vertue and power  
to prouoke birth, and to helpe it, yet lea-  
uyng all suche thynges for breuitie and  
shortnesse, we haue set here only a  
certayne, whose efficacie and po-

Wer shalbe sufficient to this  
present pur-  
pose.

Holle

The second booke.

CHow the secondine or second birth

halbe forced to issue soorth, if it come not

freely of his owne kynde.

Cap.v.

**E**re also sometime it com-  
meth to passe, that the Se-  
condine whiche is wont to  
come together with the  
byrth, remayne and carrye  
behynde, and folowe not, and that for  
diuers causes. One is, for because per-  
aduenture the woman hath ben so sore  
weakened and feeblished with trauaile,  
dolour and Payne of that fyrt byrth,  
that she hath no strenght remaynyng  
to helpe her selfe, to the expellyng of the  
seconde byrth. Another may be, that it  
be entangled, tyed, or let within the ma-  
trix (whiche chaunceth many tymes)  
or that it be destitute of humors, so that  
the water be flowen from it sooner  
then tyme is, whiche shoulde make the  
places more sliperie and more easie to  
passee thorowe: Or els that the places  
ouer weeryed with long & sore labour,

for

The seconde booke. Fol.lxx.

for Payne contract or gather together,  
and enclose them selfe agayne, or that  
the places be swolne for anguishe and  
payne, and so let the comming foorth of  
the seconde byrth.

But to be short, of whatsoever cause  
it be thus stopped, the Hydwyse in any  
Wyse muste fynde such meanes, that it  
may be vnloosed and expulsed. For o-  
therwyse, great inconuenience shoulde  
chaunce to the partie, & specially suffo-  
cation and choking of the Matrix, whi-  
che also must so much the more be taken  
hede to, for because the seconde byrth re-  
tayned and kept within, Wyll soone pu-  
trifie and rot, whereof wil ensue ill noy-  
some & pestiferous vapours ascendyng  
to the heart, the braynes, & the midriffe,  
through the which meanes the woman  
halbe short winded, faynte hearted, of-  
ten sounding, and lying without anye  
maner of mouyng or styrryng in the  
pulces: yea, and many times is playne-  
ly suffocated, strangled, and dead of it.  
Wherefore that none of these thinges  
Mi happen

## The seconde booke.

happen , with all diligence and payne it  
muste be prouided that the secondine  
be expelled.

Retention  
of flowres  
for weake-  
nesse.

Yf retention of it come by Weakenesse  
of the labourer, through long travayle,  
then must she be recomforted & streng-  
thed with good comfortable meates  
and drinke which may enheart her, as  
broath made of the yolcke of Egges , or  
with good olde Wine, and good fat and  
fidele fleshe, or Byrdes, Hennes flesh, Cap-  
pons, Partrige, Pigns and such lyke.

And yf retention of this secondine  
come , because the place is contract to-  
gether agayne, eyther els that the Ma-  
trix is swollen for long paine, then must  
be vsed suche thinges to prouoke it out,  
the whiche do make the way slipper,  
sople , & easie for it to proeede , with the  
oyles or ointmentes spoken of before, as  
oyle of Whyte Lillies, of Maiorum, and of  
blewe Lillies. Item, the berries of Juniper, or Galbanum  
beaten to powder and dronke with luke  
warmed Wine, wyll cause the same to

issue

issue out.

Item, Sothernwood, or els Penitrial sodden in Wyne, and the decoction dronken, is of the same vertue.

Item to suffume the secretes with the perfumes written of before, is good for this purpose, and the vapour of the Water in whiche Mallowes, Holyoke, and Berefoote be sodden, receaneed beneath, is lyke good.

Also to walsh that partes in Water in whiche is sodden branne, or to holde a little bagge full of sodden branne to the place, and therewithall to soke the place, is very profitable.

But yf the retention of the secondine come by reason that it is entangled or fastened in some place of the matrix, so that it wyl not resolute ne loose, then make a fume vnderneath of brimstone, Juie leanes, and Cresses, or els of Cresles and Fygges.

Also of all odoriferous and sweete smelling thinges, as Ambre, Muske, Frankencense, Gallia Muscata, and confec-

Mij

tion

The seconde booke.

tion neare, the which sauoures and perfumes put on the embers, muste be so closely received vnderneath, that no part of the smell do ascende to the nose of the Woman. For to the nose shoulde the sauoure of nothing come, but only of such thinges, the which stinke, or haue abominable smel, as Asa ferita, Castoriū, mans hayre or Womans hayre burnt, Peacockes fethers burnt. Item, in this case it shalbe very good to make a perfume vnderneath, of the houe of an asse, which thinges although they be of yll sauour, yet they be of suche nature and efficacie, that they occasionate not onlye the secondine, but also dead byrthes to proceede and come forth out of the Matrix.

And in this case also let the Woman holde her breath inward so muche as she can, for that shall dryue downward suche thynges as be in the body to be expelled.

Item, let her be prouoked to sneese with the pouder of Eleborus or Pepper put in the nose, holding her mouth and

nose

nose so close as may be.

Also the oyntment whiche is called Vnguentum Basilicon conueyed into þ matrix , is very good, for it mollifieth the place , and draweth out the secondine perforce, the which so sone as it is expell led , infude the oyle of Roses into the same matrix. Item Rose Water tempe red with a quantitie of the powder of Holyoke , and dronke, is good to expell the secondine.

And yf it be so that any parte of the secondine do appeare, let the Mydwyfe receave it tenderlye, loosing it out fayre and softly lest it breake, and if ye doubte that it wil breake, then let the Midwife tye that parte of the whiche hath handfast, to the Womans legge or foote, not very strayght lest it breake, neyther very lare lest it slip in agayne , and then cause her to sneese . Nowe yf the secon dine tary or sticke , so that it come not quicklye forwarde , then loose it a litle and a litle very tenderly , wreathing it from one side to another, tyll such tyme

Mij as

The seconde booke.

as it be gotten out, but euer beware of  
violent and hasty moving of it, lest that  
With the seconde byrth ye remoue the  
Matrix also.

And yf in this meane whyle the wo-  
man saynt or sowne by reason of greate  
payne ensayng of the takyng awaye of  
this secondine, then must ye minister  
such thinges to her the whiche conforte  
the head & the heart, as be electuaries  
whiche are confict with Muske, Ambre,  
and the confection of precious stones,  
as Diamargariton, and suche other. Also  
suche thinges the whiche comfort the  
stomacke, as Diagalanga, Dia cinamomum, &  
such lyke, whiche are alwaye in a redy-  
nesse at the Apothecaries, the whiche  
also she shall receaue with wine.

Item to remoue the secondine, & to ex-  
pel it take Rue, Horehounde, Sothern-  
wood, and Motherwurte, of eche lyke  
quantitie, and then take so much of the  
oyle of Lyllyes, as may be sufficient to  
stiepe, moysten, and soke the foresayde  
herbes

heerbes in , put all this together into  
a glased potte, couered with suche a co-  
uer that it haue a litle hole or vente  
aboue in the toppe of it , and sette this  
potte ouer the fyre of coales , so that it  
boyle a litle whyle , then take it from  
the fyre , & set it vnder the stoole where  
the woman syteth, made for the nonce,  
hauyng a pype made for the purpose,  
of the whiche the one ende ye shall put  
into the vente or hole of the couer of the  
pot, and the other ende must the partie  
receave into her body , and so to sit clo-  
sed rounde about with clothes , that no  
vapour or ayre go forth of the potte, ha-  
uyng a fewe coles vnder it to kepe it  
hotte : and thus sytte the space of an  
houre or two , tyll suche tyme as the se-  
condine moue or begyn to proceade of  
his owne kynde.

And ys it be so that ye profite not this  
wayes , yet then laye this plaster on  
the bellye betweene the nauyl and the  
secretes , of the whiche we shal speake  
*Deinde lo uocale Mijngl hereafter,*  
*viii*

## The seconde booke.

Hereafter, the which is of such operation and efficacie, that it expelleth dead birthes. If so for al this þ secondine come not forwarde, then leaue it, and vse no more medicines ne remedies to that purpose, but let it alone, for within few dayes it Wyll putrifie and corrupt, and dissolve vnto a Watery substance, thicke lyke bryne or other fex mixed with Water, and so issue foorth. Howbeit, in the meane whyle it Wyll put the Woman to great paine in the head, in the heart, & in the stomacke, as we touched before.

**C**howe that many thinges chaunce to the women after their labour, and howe to auoyde, defende, or to remedie the same. Cap.vi.

**P**is also to be vnderstandinged that many times after the deliueraunce, happeneth to Wo- men other þ feuer or ague, or swelling, or inflation of the body, other tumbling in the belly, or els commotion or settelyng out of order of the Mo- ther

The seconde booke. Fol.lxxiiii.  
ther or Matrix . Cause of the whiche  
thinges , is sometimes lacke of due and  
sufficient purgation and clensing of the  
flowres after the birth , or els contrary-  
wyse ouermuch flowyng of the same,  
which soze doth weaken the Woman.  
Also the great labour and styrring of  
the Matrix in the byrth.

Then as oft as it commeth for lacke  
of due purgation of the flowres , there  
muste be ministred suche thynges the  
whiche may prouoke the same, whether  
it be by medicines taken at the mouth,  
or by lotion and washing of the feete, or  
by fumes, or odour, or emplastration, or  
by decoction of herbes seruing to that  
purpose, or els by oyntmentes, and such  
other thinges , accordyng as the person  
or the perill doth require, of the whiche  
thinges fewe or no women be ignorant.  
And ye must take diligent hede that she  
be exactly and vitterly purged, to this be  
agreable all suche simples the whiche  
prouoke brine , and open the vaynes,  
makynge free way for the blood to passe  
and

The seconde booke.

and sende the humours and matter  
downward, as Motherwurt, Asarum,  
Savine, Peniriall, Parcely, Charuyll,  
Annis seede, Fenell seede, Juniper ber-  
ries, Rue, Bay berries, Germaunder,  
Valeriam, Tyme, Cinamome, Spike-  
narde, and such other. Al those thinges  
as they do prouoke and cause vrine, so  
do they also prouoke & cause the flow-  
ers to depart. Howbeit, as neare as ye  
can, vse none of these thinges without  
the counsayle of an experte Phisition,  
lest whylest ye helpe one place, ye hurt  
another. Also to sneeze, helpeth muche  
to this matter, & to holde in the breath,  
enclosing the nose and the mouth. Al-  
so fumigation made of the eyes of salte  
fyshes, or of the hone of a horse vnder-  
neath, prouoketh the flowres. If ye pro-  
fite not by this meanes, then being able  
to beare it, let her blood in the vaine cal-  
led Saphina, vnder the ancles of the feete,  
for this prouoketh flowres cheefely of  
all other thynges.

Lykewylde do, yf the woman haue the  
ague.

The seconde booke. Fol.lxxv.

ague after her labour, for that cometh  
of like cause by retention of the flowres,  
and in the feuer let her bse to drinke Wa-  
ter, in the which is decocte Barley bea-  
ten, or Cicer and barley together, or  
Water in whiche be sodden Tamarindi, or  
Whay of mylke, and let her eate a cullis  
made of a Cocke, and sweete Pomegra-  
nates, for these thinges do prouoke the  
flowres, and mittigate the immoder-  
ate heate, refreshing greatly the body,  
loosyng and opening suche thinges the  
whiche before were constricte and clud-  
dered together.

If the body after labour do swell and  
inflate, then let her drinke Water, in the  
which is sodden Cicer & Cummin, bea-  
ten together.

Item good olde wine with the electuarie cal-  
led Diacininum, or of þ Trochiskes of Alkechen-  
gie, otherwyse called Halicacabus.

Also in this case a clyster made of suche thyn-  
ges the which do vanquishe and expell ventosi-  
ties and wyndynesse, as Annis seede, Fenell  
seede, Rue the hearbe and the seede, Bay berries,

Cum-

## The seconde booke.

cummin. &c. Also a pessarie or suppositar made for  
that part of Aristolochia Rotunda, Squinantum,  
Storax Liquida, Dorenicum, Zeduaria.

Agayne, ys the woman after her labour haue  
frettyng and gnawyng of the guttes and Payne  
of the Matrix, and other secrete partes there a-  
bout, then let her vse the vapour and fume of  
suche thinges the whiche haue vertue to mitte-  
gate, swage, and alay the Payne, as Mallowes,  
Holyoke, Senegreke, Comin, Camomell, and  
Sauine. Of these also make emplasters and  
bagges, the whiche may be applied to the pay-  
ned places.

Also to annoynyt þ places with Oleum sesaminū  
(yf it were to be had) or with oyle of sweete Al-  
mondes. And ys no greate heate do abounde in  
the woman, she maye drinke Triacle, or Trifera  
magna, with wine in whiche is decoct Mother-  
wort or Muggewort.

Also agaynst Payne in the priuie partes, take  
Peniriall, Policaria, sixe leaues of baye tree, seeth  
them together, and receauie the vapour vnder-  
neth closely.

Item, take Rue, red Motherwort, Sothern-  
wood, beate them together, and temper them  
with the oyle of Peniriall, and put all together  
into a pot, and set it ouer the fyre a whyle tyll it  
be somewhat sodden together, and then take it of  
agayne, & put it into a litle rounde lynnen bagge  
made for the purpose, the whiche with these  
hearbes in it, ye shall conuey into the secretes.

Item, take Camomel and Lyne, of eche lyke  
much

muche. iii. handfulls, bray them together, and  
seethe them with white wine, and then put it in  
a rounde bag of linnen, as before was done, and  
conuay it into the womans priuie partes.

Item, let her drinke for the same purpose, two  
graynes of muske with wine.

Item, take whyte Onions, and couer them  
under the hote ashes, the whiche when they be  
well rosted, beate them together with freshe  
Butter unsalted, and make it in maner of a pla-  
ster, and then put it in a linnen bagge, and con-  
uay it into the places, as before : in the meane  
whyle perfumyng the priuie partes with whyte  
frankencence and Storax.

If it be so that the woman be vexed about the  
backe and loynes after her labour, take Camo-  
mell and Huggewort, of eche two handfulls,  
of Wormewood, Sothernwood, of eche one  
handfull, or Motherwort three handfulls, of  
Cinamome and Nutmegges beaten small halfe  
an ounce, decoct all these thinges together, and  
in the water of this decoction beyng warme,  
dyp a spounge or other lymen clothes, somen-  
tyng, sokyng, and strekyng the backe with the  
same, and so do ostentymes, or els put all these  
foresayde herbes together sodden in a bagge, and  
lay it plaster wyse to the backe.

If this profit not, take oyle Mardine, oyle of  
whyte Lillies, of eche an ounce and an halfe, to  
the whiche put a dram of Nutmegges beaten to  
small powder, with this annoyn the backe.

Item, take oyle of Anete, oyle of Camomell,  
of

1031. The seconde booke.  
of eche an ounce, Oyle of whyte Lillies two  
ounces; of Ware two drams, dissolute all these  
together ouer the fyre, and therewith annoynct  
the backe.

What re-  
medies whe-  
the flores  
issue more  
aboundant-  
lye then  
nedeth.

But yf after the labour the flores  
issue more vehemently, and in greater  
aboundaunce then they shoulde, to the  
great effeoblyshing of the woman, and  
inducing of much langour and payne-  
fulnes, then fyrt shal ye note wherupon it  
commeth: for the cause knowen,  
the disease may the more redyly be re-  
cured, and causes of it be divers, but  
moste especiall those that folowe, that  
is to say: Of much abounding super-  
fluous blood contayned in the whole  
body, or of much commixtion of the co-  
lericke humour and the blood together,  
by the whiche the blood is enfired and  
chaufed, and so distendeth, openeth, and  
setteth abroade the baynes whiche des-  
cende to the Matrix.

Also the blood beyng very thyn and  
waterish, for so it penetrateth, chilleth,  
and issueth forth the sooner. Also yf the  
baynes be very large, and receive much  
blood,

The seconde booke. Fol.lxxvii.  
blood, for in that case they sende foorth  
the more agayne. And ys the Matrix be  
vnmighty and Weakened, the vaynes  
lyke wyse are weake and large, so that  
they can not retayne nor withhold the  
blood.

Also if the body of the Woman, or the  
outwarde partes be very dence, close, &  
compact together, so that the outward  
pores be contract and shutte, in suche  
wyse that no vapours or swet can issue  
out at them, then this shall cause the yll  
humours (whiche otherwyse woulde  
passee through the pores in swet) to re-  
mayne within the bodye, and there to  
engender and encrease great flire and  
aboundaunce of matter, whiche procee-  
deth with the flowres, and augmenteth  
the quantitie of them.

Also ys the vaynes of the Matrix be  
(by some chaunce) open and flow forth,  
as ys the Matrix be perished or other-  
wyse viciate: Or ys it chaunce that  
the Woman haue hadde a fall, or hath  
bentrysse, or beaten, by all and any  
of

The seconde booke.  
of this meanes may come this inordinate flure of flowres.

Good coun-  
sell to the  
woman.

Nowe seyng then that it ensueth by so manyfoldz occasions and causes, it shalbe mete that Women in this case be nothing ashamed ne abashed to disclose their mynde unto expert Phisitians, shewing them every thyng in it, as they knowe wherevpon it shoulde come, so that the Phisition vnderstanding the Womans mynde, may the sooner by his learnyng and experiance consyder the true cause of it, and the very remedye to amende it. And many thinges there be which ceasse and restrayne this ouermuch flowing of flowres, both Electuaries, Confections, Trochiskes, Pouders, Clysters, Odours, Suffumigations, Bathes, Plasters, and Dyntimentes, of whiche for the loue of Women I wyl here set forth the most principall and best.

Fyrst then to stinte and restrayne the outrageous flure of flowres, it shalbe very good to binde the armes straignt and strongly, and not the feete or handes, as some unwyle men do teache

The second booke. Fol. lxxviii.

teache, and then to sette a ventose bore, or cuppyng glasse with fyre (which is called boryng) vnder the breastes, without any scarification, laying also lynnem clothes dypped in vineger on the belly betweene the Nayll and the secretes, conueyng also into the places suche thynges whiche haue vertue to restrayne blood, as the flowre and rynde of Pomegranate, Ambre, Terra Sigillata, Bole Armeniacke, Sanguis Draconis, Hematites, the red Rose, whyte frankencense, & galles, all those things, or as many of them as ye can conueniently get, beate them to powder in lyke portion, and temper them with redde wine, makynge of it a plaster, the whiche so tempered, put into a lytle rounde bagge, the quantitie of a mans thumbe, the whiche she shall put into the priuie partes.

C Item another plaster, to be ministred lykewyse.

Take of the blood stone called Emathites, Bole Armeniack, of ech halfe an ounce, Sanguis draconis, Licum, of eche two drams, Karabe, other wise named Ambre, the cuppes of Acornes, Cipres tree Nuttes, flowres of Pomegranade, of eche one dram, of the scales of Iron one dramme and a halfe, Turpentine and Pitche lyke quantitie, or so muche as shalbe sufficient to make a softe and somewhat liquid plaster, beate and braye all these together, temperyng it to a plaster, and then do with it, as ye dyd with the other before.

C An oyntment for the same purpose.

C Take oyle Martine, oyle of Roses, of eche fourre ounces, Karabe, the scrapyng of Juery, the

*Ni* scrapyng

## The second booke.

scrapping of a goates horne, redde Corall, Terra sigillata, whyte Frankencense, of eche (beyng well and fynely beaten) two drams, of whyte ware two ounces: all those tempered together, make them in an oyntment, and therewith annoynce the wombe and the secretes.

### C A bath concernyng the same.

Take Wormewood, Plantane the more and the lesse, the toppes of Vines, freshe braunches of wylde Mulberies, or of the bramble, bryrpe Damassons, Sloes, or Bolasse, wylde Peares, Medlers or Mispylles, of eche three handfulls, of red rose leaues two handfulls, of Daisies, of all sortes of Thystles, of eche two handfulls, of Cinckfoyle the leaues and rootes, Toymen-tyll the rootes, Colubyne, of eche an handfull: Also of Acorne cuppes a lawcer full, of Gaules, of Acornes pylled, of Bursa pastoris, of eche two handfulls, beate all these to powder, cuttyng and brusyng that that will not be beaten to powder, and seethe them together in rayne water, or els in water in the which ten or twelue burnt flynt stones haue ben quenched. This done, let the woman bath her selfe in this water vp to the Nauyll, and when she commeth forth of the bath, geue her to drynke two drammes of Electuarium Athanasie, or Miclete, with Plantane water, or ys she be sore thirstie, with red wyne.

And lykewyle ye maye geue to her of these electuaries that folowe. Take good olde roose Suger two ounces, of red Corall, burnt Juery, Wolfe Armeniache, of eche two drams, of Hematites

tites three drammes: beate all these thynges together, temperyng it with the roose Suger, and let her receave of it in the Mornynge and Euenynge, at eche time one dramme, with vi. spoonefulls of Plantane water, or els the water of Bursa pastoris.

Item, take of the stonye Emathites, and rub it on a Barbers whetstone, called a hone, tyll the hone seeme red, then walsh it agayne from the hone with Plantane water, and so do often tymes, vntyll thou haue a good quantitie of it, and euery Mornynge let the woman drynke. iii. iii. or. v. spoonefulls of the sanie water.

Furthermore, there be at the Apothecaries Trochiskes, whiche helpe greatly in this case, as the Trochiskes of Carabe, or Anthre, and the Trochiskes of Wole armeniacke, whiche must be ministred a dramme or more of eyther of them, with. iiiii. or. v. spoonefulls of Plantane water.

Who that requireth farther in this matter, let them aske counsayle of the Phisitions.

Nowe yf it be so that there be engendred any Apostume or other disease in the priuie places after her labour, then muste the Apostumes and diseases be cleansed, purged, and healed, the payne & ache of it mitigated & swaged with the iuyce of the berryes or leaues of Nightshade,

The second booke.

shade, and the iuyce of Plantane, also  
the oyle of Roses, so that all those thynges  
be tempered together and the places  
annoyned therewith.

Item other wyse. Take the white of  
an egge, Womans mylke, the iuyce of  
Pur slane, and temper al these together,  
and conuey it to the diseased place.  
These medicines do refrigerate & coole  
the vehement heate wont to be in Apo-  
stumes. As for the rest, howe to open,  
drye, and cleanse such Apostumations, ye  
must consult with some Phisition or ex-  
pert Surgian.

Many tymes also it chaunceth that  
the fundement gytte commeth foorth  
both in man and woman, and specially  
in women in this busines, by reason of  
theyr great labour and stryuyng with  
them selfe: wherfore in this case it is  
the Mydwyses parte, with her hande  
warmed and wet in whyte wyne, to re-  
duce it backe into his place agayne, the  
which ys she can not by this meanes, for  
because peraduenture it be swolle, then  
let

let her dissolve butter in Whyte Wyne  
warmed, and therein dip Woll, with the  
which wrappe the same gutte a whyle,  
so doyng often tymes till it be swaged,  
that it may be returned in agayne. And  
ye may vse in the steade of Whyte Wine,  
Luke Warme mulke.

And when it is thus returned and reduced  
into his place: Take ware, and melt it together  
with Masticke or whyte frankencense: then  
spredde it vpon linnen plasterwyse, and laye it  
ouer the place where it came foorth, byndyng  
it to with a linnen cloth or roller, for partyng  
of. And let this be done thus so often as the go-  
eth to stoole, after that she hath done, vntyll such  
tyme that it be so settled within, that it come  
no more out.

And yf ye wyll not occupie ware, then dyppe  
woll in the oyle of Mastyche, or of Spyke Hardy,  
and laye it vnto the place ouer the fundement,  
byndyng it fast vpon the place, as before.

Item another way. Wash and soke the gut  
with the water in whiche is decocte and sodden  
such thynges whiche ericate, drye, and constraine  
or combynde: as Galles, Cipres nuttes, flowres  
of Pomegranade, Ambre, Masticke, Franchen-  
cense, Sanguis draconis: and when it is wel was-  
hed and soked with this water, then take the  
powder of an Hartes horn burnt, and stue it  
rounde about the gutte, and so respose it agayne

The second booke.  
into his place.  
Agayne, sometyme it commeth to  
pasle, that after the Womans labour the  
Matrix is remoued out of his place, and  
appeareth soorth: Then let it be Was-  
hed and sooked with the Water in Whi-  
che be sodden these thynges folowyng.

Take of Cipres nuts, Spyke narde, Balaustium,  
Acorne cuppes, of eche an ounce, of Mespylles,  
and brynde wylde Peares, and brynde Apples,  
Plummes, and Damsons or Bollasse, of eche a  
handefull. And suche of those as be to be pow-  
dred, beate them to powder, and the rest diuide  
and cut them small, then seeth them all together  
in rayne water, or els in water in the whiche  
steele beyng redde hotte, hath ben oftentymes  
quenched, and in the same water let the partie  
bathe her vp to the Nauyll: or els dyppe a spunge  
or a locke of woll in it, and therewith wash and  
sooke the same Matrix oftentymes. Then euer  
with a fayre cleane lynnen cloth wype it cleane  
agayne, and strewe vpon it the powder folow-  
yng, beaten very small, and searsed through  
lyke.

Take of Frankencense, Carabe, Galles, Balausti-  
um, Cipres nuttes, Alome, Antimoni, Bole Ar-  
meniache, Mastickie, of eche lyke muche, beate all  
these to verye fyne powder, and strewe the Ma-  
trix with it, then tenderly reduce it into his place  
agayne with warme lynnen clothes, byndyng it  
vp.

The second booke. Fol.lxxxi.

wp. But yf so be that the Matrix be swollen, so that by this meanes it wyll not be restored to his naturall place agayne, then dissolve butter in white wine, as ye dyd before, and with the same soke it, vnto such tyme as it be swaged, and then reduce it.

Agayne, sometyme it chanceth that remedies the Womans Nauyll through labour is for the wo- dissolved, so that it openeth it selfe; then mans nauil, when it o- make a small tent of fine lynnyn, and peneth it annoynct it with this oyntment that selfe for followeth, & the same put into the Nauyll. payne in the labour.

Take whyte frankencense, and beate it to powder, and then temper it with the whyte of an egge, so that it be after the maner of liquid honye, with this annoynct the Nauyll within and without, annoynctynge also the tente, the which being put in the hole of the Nauyl, vnde sonie cloth ouer it to kepe it in his place.

Item, many tymes it chanceth that holwe that thow the great difficultie & thronges sometime of labour, the priue part and the fun- the priue dement become one, by reason of rup- part & fun- ture and breaking of the same parte in dement be- the delyuerance of the chylde, and that come one, by that meanes the Matrix descendeth and issueth downe, the whiche thyng chaunceth sometymes, by reason that the

## The second Wooke.

the same place is very narowe, and also tender, and the byrth bygge & of great growth, so that it proceedeth with such violence, that it breaketh the way before it.

When this mishappe falleth, fyse walke and soke the Matrix, and also reduce it to his place agayne, after the maner as I tolde you here immediatly before: then heale this bracke & wounde by sowynge of both sydes of it together agayne with a sylken threede, as Chirurgions do other woundes, and if that lyke ye not, then may ye cure it otherwyse without sowynge, thus.

Take two lyttle peeces of linnen cloth, eche of the length of the wounde, and in breadth two syngers broade, spreade the lytle clothes with some fast cleauryng plaster, the whiche wyll cause the cloutes to sticke fast where they shalbe set: then fasten them, the one on the one syde of the rift, the other on the other syde, so that nothyng appeare betweene the peeces of linnen in the myddes of them, but only the clyste and ryste of the wounde in the breadth of a strawe. Then (this done) sowe the sydes of the linnen together close, as before I byd you to sowe the shyn, and when they be thus stytched together, lay a lytle

The second booke. Fol.lxxxvii

lytle liquid pitche or tarre vpon the seame. And this done, the lappes and sydes of the wounde vnder the lynnen plaster wyll growe together agayne and heale, and then may ye remoue your plasters.

C Item another way.

Take Camfely dryed, and beate it to powder, also a lytle quantitie of Cinamome beaten to powder, ioyne them together, and strow of this powder into the wounde, and without fault it shall heale.

C Of abortementes, or vntymely byrthes, and the  
caules of it, and by what remedies it may be  
defended, holpen and eased.

Cap.vii.

**A**bortement, or vntymely birth, is when the Woman <sup>Many causes of vntymely byrthes.</sup> is deliuered before due sea-  
son, and before the fruite be rype (as in the.iii. iii. or  
v. moneth) before the byrth haue lyfe: and sometymes after it hath lyfe it is  
delyuered before it stirre, being by some  
chaunce dead in the mothers Wombe.  
Of the whiche thynges there be many  
and divers causes.  
Fyrst, sometymes the mouth of the  
**Matrix**

The second Booke.

Matrix is so large and ample, that it can not conveniently close it selfe together, neither conteine the feature or conception: Or els it may be so corrupted & infected with viscous, slymye, fleumasycke, and other wateryshe humours, that the carie or holownesse thereof is thereby made so slypperye, that the feature conceaued can not there remayne, but slyppeth and slydeth foorth agayne. Also sometymes the Matrix is apostumated and soze, so that for Payne it can not contayne the conception.

Item, sometymes the Cotilidons, that is the baynes by the whiche the conception and feature is tyed and fastened in the Matrix (thorow the whiche also the feature receaueth nourishment and foode, as is declared in the fyrt booke) be stopped with viscous & yll humours, or els swollen by inflasione, so that they breake, by the whiche meanes, the feature destitute of his mont nourishment, peryshest and dyeth, & that most comonly in the second and thirde moneth after

The secon d booke. Fol.lxxxiii.  
after conception. Wherfore Hipocrates  
sayth : All such women whiche be im-  
pregnate or conceaued, being of a meane  
state in theyr body (that is to say, nether  
to fatte or grosse, ne to spare or leane) yf  
it chaunce any suche to aborce in the se-  
conde or thirde moneth (no other evi-  
dent cause appearyng) knowe ye for cer-  
taine, that it ensueth for because the Co-  
tilidons be opplete, stopped and stuffed  
With yll humours, and be swollen and  
puffed therewith that they breake: and  
so consequentlye the feature dyeth for  
faul特 of foode.

Item, aborcement sometyme com-  
meth by reason that some of the places  
about the Matrix be diseased and gree-  
ued, as yf Intestinum rectum, whiche is cal-  
led the fundement gut, be ulcerate, ha-  
uyng the pyles or Hemorroides: or the  
visick or bladder be swollen or encubred  
With the stone, the strangury, or other e-  
ui. In these cases through the great la-  
bour & paine the whiche the partie hath  
in endeouring & enforcing her self other  
to

Aborcement  
by reason of  
some greefe  
about the  
Matrix,

## The second booke.

to stoole, or to make water, be engendred great motions downward, wherby manye tymes the handfastnes of the Cottidons is broken.

Aborcement  
by Tenas-  
mas.

Also aborcement maye come of a disease called Tenasmus, the which is when one hath euer great desyre and luste to the stoole, and yet can do nothyng, neverthelesse the parties greatlye do enforce and payne them selfe to it. And as Hipocrates saith, the pregnauant Woman which hath Tenasmus, for the most parte abhorceth, that is to say, bringeth foorth her chylde out of tyme.

Aborcement  
through the  
cough.

Item the cough, if it be greenous, causeth the same. And as the forenamed excellent Phisition sayth, such as are very spare and leane, and brought low, euermore lyghtly do aborse, for because that all the meate and foode the whiche they receave, turneth to foode, nourishment, and restauration of theyr owne bodyes, and so is the conception destitute of foode, wherfore necessarylye it dyeth.

Item

The second booke. Fol.lxxxiiii.

Item, this chaunce also commeth by ouermuch bledyng at the nose, or other wher, or issuyng of the flowres immoderately. And so sayth Hypocrates, yf the woman yeeld flowres after her conception, it can not be that the feature do long proue, the whiche saying must be vnderstande, yf they flowre behemently, or that the partie be weake and verye spare, or yf it be after the thyrd moneth, for it may be well, that in the fyrt and seconde moneth flowres may issue, and yet no daunger. For as yet lytle foode and noryshment satisfieth the conception for the smalenesse thereof.

Item, to be let blood may be the cause of aborcement, whiche must be vnderstande, in such as haue but lytle store of blood: but such as haue great copie and plentie of blood, may without any peryll (if any urgenter cause require it) be let blood, so that it be after the fourth moneth, and before the seuenth. Howbeit, I woulde that none shoulde be let blood, except some great and wayghtie cause  
dyd

The second booke.

dyd require it.

Item, it may come by taking of some strong purgation before the fourth moneth, and after the seventh moneth.

And yf it be so that any necessitie do so require that she must needes receaue a purgation, let it be done betweene the fourth and the seventh moneth after the conception, for then may it be with least peryll. And see that the purgation be very gentle and easie.

Also this may come by reason of a continuall flixe, be it blooddye or otherwyse, and speciallye yf the Woman be weake & spare, for by that meanes the conception is greatly weakened and perished. Also ouermuch vometyng may be cause of aborcement, for by ouermuch galpyng and reachyng vpwardes, the Cotilidons may be broken, and so the feature to perishe.

Item, ouermuch famine or hunger and also sharpe and feruent sycknesse may be the cause thereof, as the pestilence, apostume in the brest, and sodayne pallie,

The second booke. Fol. lxxv.

palsye, the fallyng sycknesse. &c. Also ouermuch drunkennes, and excesse feedyng and surfettyng, by the whiche the byrth is suffocate and strangled in the belly, and the foode corrupt for lacke of due digestion.

Item, if the birth be sickle by any out-warde or inwarde cause, or yf the Secondine in the whiche the feature is conteyned, do breake before his tyme, and the humours and waters of the same flow & issue forth, causing the place to be slyppery, and so the birth to syde away vntimely: Or yf the mother haue taken very great cold, or ouer great heat, whiche weakeneth both mother and chyld.

And therefore ought women with chylde to erche we much bathing or going to the hot houses in theyr teemyng, for that may do hurt three wayes.

Fyrste, that it kyndleth or enflameth the ayre or breath conteyned in the body, and so stysleth the chylde, and sometime the mother to.

Secondly, that it relaxeth, dissolueth, & looseth

## The second booke.

looseth the Cotilidons, and so maketh  
the byrth to issue foorth. Thirdly, that  
the vller heate of the bath, increaseth  
the inwarde heate of the body: In so-  
much, that the byrth not beyng able to  
sustayne and abyde the heate, naturally  
proceedeth for refrigeration and coo-  
lyng: but in the tyme or about the tyme  
of labour, she may vse bathes, as I de-  
clared before, for the redyer and more  
expedite delyuerance.

Cause of a  
borcement  
by mutati-  
on of the  
weather.

Item, the intemperancie and muta-  
tion of the ayre and Weather, may be  
cause of aborcement. For (as Hypocrates  
writeth) whensoeuer the Wynter is hot  
and moyste, and the spryng tyde after  
colde & drye, such women in that spryng  
tyde may soone & of a lyght cause haue  
aborcement: Or yf they aborce not, yet  
they shalbe deliverner with great payne,  
and the birth shalbe very weake & sick-  
lye, so that it shall dye strayght, or yf it  
dye not by and by, it shal proue but very  
slenderly. The cause of the which thing  
is this.

*dislod*

For

The seconde booke. Fol.lxxxvi.

For Wher that suche Wynteryng  
chaunceþ, the hoate and moyste Wea-  
ther heateth & moysteth the Womans  
body, & by that the bodye is opened, vn-  
loosed, & resolued, no lesse then though  
she were every day bathed, and vpon  
this when the spring time commeth, yf  
it be colde and drye, findyng the body o-  
pen and vnloosed after suche sorte, the  
colde entereth and pearceth the bodye  
the sooner & the more vehemently: and  
the byrth feeling the sodayne colde and  
chaunge of weather, pineth away, and  
dieth in the Mothers belly, or anone af-  
ter it is delivred: or yf it lyue, it lyketh  
not, nor proueth not, and great payne  
shall it be to kepe life in it.

Item, aborcement may happen by  
ouer muche styring of the body in la-  
bouryng, daunsyng, or leaping, or by  
some fall or thrust agaynst some wall, or  
beatyng, or by some sodain anger, feare,  
dread, sorowe, or some sodayne and vn-  
lookedfor ioy. Thus haue I rehearsed  
all the causes of the whiche moste com-

Oi monly

## The seconde booke.

monly maye ensue aborcement or brytely byrth, the whiche no doubt is much more grieve and Payne to the Woman, then the very naturall labour, for such thinges as chaunce to man or Woman contrarie to nature, or before nature doeth require it, is farre greater grieve, then the same happenyng and comming in his due season.

Tokens to  
foresee a-  
boircement.

**C**Signes whereby ye may foresee aborcement.

**H**en the Woman shall labour before her tyme, these signes are wont to go before. First her brests which before were hole, sounde, & full, shall begin to ware lesse, to fall, and to flagge, and then euer for the most part aborcement followeth. But if it be so that she go with two chil- dren at once, if one of the brestes swage, whiche before was in good lyking, the other remaynyng sounde and safe, then loke of what side the brest is of, and the chylde of that syde is in perill. where- fore Hippocrates wryteth, yf the ryght brest flake or flagge, the masculine or male

The seconde booke. Fol.lxxxvi.  
male byrth is in perill: yf the leſt, the fe-  
male byrth, because that for the moſte  
part when there be two at once, the one  
is maſculine, and the other feminine:  
the man lyeth in the ryght ſyde, and the  
woman in the leſt moſt commonly.

Also another ſigne of aborciement is,  
when the woman hath great paynes  
and dolours of the Matrix, & that ſhe  
begyn to waxe red in the face, and all  
partes of the bodye to ſhake & tremble,  
as though it were in a feuer, or the pal-  
ſey in the head. Item when ſhe feeleth  
great ache in the inner part of the eyes  
toward the braines, the reſt of the body  
taken as it were with a werynes with-  
out any outward apparant caufe, why  
theſe thinges portende and ſignifie a-  
borciement to be at hande, ſpecially yf at  
the ſame time the flowres iſſue alſo.

Item, yf the womans body do ſwell  
and inflate with a certayne hardenesſe  
or ſtyfenesſe, and that ſhe feele ſtiches,  
and as it were ventolitie or wynde,  
runnyng from one ſyde of the bodye

O ij to

to the other, and yet the belly not withstanding , beyng nothyng the more ponderous or wayghtie , and that the same inflation do persist and continue a nyte whyle, the woman taking and eatynge suche thinges whiche haue vertue to discusse and vanquishe ventositie and wyndynesse : this thynge I saye doeth betoken perill of aborce- ment through ventositie and infla- tion, and that chiefely about the thirde or fourth moneth after the concepti- on.

Thus haue I sufficiently declared evident and sufficient signes, whereby may be prouided and foreseen the aborcement before it come. Nowe wyl I shew you the remedies wherby it may be auerted and let.

The cheefe remedie to auoide aborce- ment is , to shun all such thinges which may be cause of it, the whiche I haue competently entreated of already : but yf ye feare aborcement, because that the mouth of the matrix be ouer ample and large,

Remedies  
whereby to  
auoyde ab-  
orcement.

The seconde booke. fol.lxxxviii.

large, then must ye vse suche thynges  
Whose operation is to contrahe, con-  
strayne, and bring together, as Bathes,  
Fumigations, Dyntmentes, Plasters,  
Odours, and suche lyke, of the whiche  
I hane spoken before, and such thinges  
the whiche reppresse and stynte the flow-  
ers flowing ouer muche after the  
byrth.

Agayne, yf ye feare this peryll, be-  
cause the mouth of the Matrix is moyst  
and slipperie, other because that the co-  
tilidons be replete and fulfylled with  
viscous humours, and with inflations  
or ventosities: then may ye defende it by  
vsing of suche thinges whose qualities  
be to purifie, clese, ericate, or drye, and  
to reppresse ventosities, whereof also we  
haue made mention here before.

Howbeit, in all this matter, let not  
to make some expert phisition of your  
counsayle, yf ye may haue such one, for  
because that many suche thinges come,  
and not all by one way or meane.

And yf ye doubt peryll for because  
Qij that

The seconde booke.

that the Matrix or other places about  
be infected, exulcerated, or apostumate,  
or hauyng the stone or strangury, and  
suche other thynges: then aske and vse  
the advise of some well learned med-  
cine , and he shall shewe you howe all  
thynges shalbe recured.

If agayne ye feare aborcement be-  
cause the partie is very Weake and low-  
brought, then let her feede on such thin-  
ges the whiche moysten and nouryshe  
wel, or fatten y body , as Capons fleshe,  
Kid, Lammie, young Veale, Partrige,  
and such other.

Agayne, yf the Woman be taken with  
any sharpe and fell disease, then let her  
be cured of the same as shorlye as can  
be, With such thinges the which apper-  
tayne to the curyng of such disease: or yf  
she haue susteyned any long famine or  
hunger, then let her be fedde with good  
meates and drinke moderately taken:  
and yf she haue surfetted by ouermuch  
eatynge and drynkyng ( as nowe a-  
dayes most commonly people do ) then  
let

tyme and in one person, the surer may  
ye be that the birth is dead, the whiche  
beyng once dead, all diligence muste be  
hadde that it may be expelled out of the  
Womans body.

But here must ye see agayne whether  
it may be expelled, the Mothers lyfe sa-  
ued or no: for sometime it chaunceth  
that the Mother dyeth withall, and  
sometimes the Mother doth well and  
prospereth.

Whether the Mother shalbe in perill  
withall, or no, by these thinges shall  
ye knowe. If the Woman beyng in the  
labour sowne or feare, as though she  
were in a trannce: if her remembraunce  
fayle her, and she ware feeble and scant  
able to moue or stirre her selfe: yf she  
(called with a loude voyce) can aun-  
swere nothyng at all, or els verye li-  
tle, and that very softly, as though her  
voyce began to fayle her: if she be inua-  
ded or taken among in the labouryng  
with conuulsion or shrynkelyng toge-  
ther: if she refuse or cannot broke meate:

To knowe  
whether the  
mother shal  
be in perill  
or no.

ys

## The seconde booke.

Yf her pulces beate very fast , the which signes When ye see in y Woman labou- ryng, it is an evident token that she shal not lyue long after her deliueraunce, Wherfore commit the cure of her to the handes of almyghtie God : but yf none of these signes do appeare , then haue good hope, for the Woman shall do wel, the byrth beyng once departed: wher- fore gene all diligence to the expulsion of it , that the Woman maye be deliu- red of this dead burthen , the whiche thyng maye be done by two wayes, eyther by medicines expulsive , or els by certayne instrumentes made for the nonce.

Fyrste without instrumentes , with this fu- migation . Take eyther the houe or dongue of an Asse , and put it on coles , and let the woman receaue the fume vnderneath.

### ¶ Another.

Take the skinne of an Adder, Myrr, Castoriū, Brymstone, Galbanum, Opponacum, Madder that the Diers occupie, Pigeōs donge , or Haw- kes donge, beate al these to powder, & temper the with Dre gal, & make pylles of it, eche the quan- titie of a fylberde nutte , and then put one after another

another in the coales, and receaue the fume thoro-  
rowe a pipe or conduite made for that purpose  
into the priuities.

Another. Take Encense, Oppoponacum, Galba-  
num, Brimstone, of eche lyke muche, beate them  
together, and temper them with Oxe gall, and  
make pilles of them, and then of the same make  
fumigations, as before.

A potion for the same purpose. Take Asa fetida,  
halfe a dram, of Rue three drams, of Myrr two  
drams, and beate them to pouder, and geue to  
the woman at eche tyme a dram of this powder  
with white wine, or with water in the whiche  
Sauine is sodden.

Another. Take figges, Fenegreke, Organnie,  
and seethe them in water, the whiche geue vnto  
the woman to drinke: for this drynke wyll en-  
gender lubricitie and slippernes in the neather  
partes, and vse also some of those thinges which  
haue vertue to prouoke the byrth, whereof we  
entreated before.

Item, certayne pessaries or suppositaries con-  
cernyng the same. Take Gummie, Ammoniache,  
Oppoponacum, Heliborus niger, Staphisager,  
Aristolochia longa, and Colocinthis without his  
kernels, beate all these thinges together, tempe-  
ring them with Oxe gall, and also with the iuice  
of fresh Rue, then make a pessarie of wollen, and  
annoynct and wete the pessarie with the same,  
conuaying it into the secrete places.

Item another. Make a pessarie of wollen, of  
the length and thicknesse of a finger, and dippe

## The seconde booke.

it in the iuyce of Rue in the whiche is dissoluued  
a quantite of Scammonie , and do with that  
pellarie, as before.

Item, take Aristolochia rotunda, Sauine, gar-  
den Cresses , of eche lyke mucle , beate them to  
powder, and temper them with Oxe gall, with  
this amoynt a pellarie made and ordered as be-  
fore is spoken of.

Item, ys the woman drynke the mylke of  
another woman , it wyll styrre and expell the  
byrth.

Item, take of the iuyce of Dittayne , or of the  
powder of the roote of the same hearbe two  
drams, and geue the same to drynke to the wo-  
man with wine, except she be in great heate , for  
then shall ye geue it her with luke warme water,  
and this shall expell the dead byrth without anye  
peryll of the Mother.

Item, take of Myrrhe four drammes, of Ci-  
namome, Galbanum, Castorium , of eche two  
dramis, of Oppopocacum, one dramme , all those  
beaten & tempered together with Oxe gal, make  
pilles of them , wavyng eche of them a dramme,  
and with the fume of thole, perfume the neather  
partes, by this vapour the dead birth is brought  
forth, inflation and suffocation of blood is ex-  
pelled.

Item , take of water Minte, Sothernwood.  
Mugwurt, of eche a handful, of Asphaltum halfe  
an ounce, of Madder , two ounces and an halfe,  
of Camomell, Horehounde, Senegreke , of eche  
two ounces, seethe all these thinges together in  
rain

rain water, in the whiche let the woman bathe her selfe: then take of Hennes greace and Duckets greace, of eche four drammes, to the whiche ad two ounces of oyle of Wyll seede, with this oyntment annoynct the womans head conmyng out of the bathe, then take Date stones, and beate them to powder a dramme and an halfe, with a scruple of Saffron tempered together with white wine , the whiche let her immediately drinke after she come forth of the bathe.

Item, take Opponacum , and make thereof a pessarye the quantitie of a fynger , conuayre it into the priuities , this expelleth the deadde byrth.

Item, take of Galbanum a dram or somewhat lesse , of Goates mylke an ounce and a halfe, or two ounces, in the whiche the Galbanum being dissolved , geue it to the woman to drynke.

Item, a plaster for the same . Take Galbanum, beaten and tempered with the iuyce of Mother-wurt, and of this make a plaster by putting to of ware a certayne quantitie : then take a linnen cloth of suche length and breadth that it may couer all the belly vnder the Nauell to the priuities, from one syde to the other , on this clothe spreade this plaster of the thicknesse of a strawe, and lay it to the belly.

Item, take the Triacle whiche is called Diastellarum , & geue of it to the woman for to drinke, and it wyll expell the dead byrth.

But ys all these medicines profite not, then  
must

## The seconde booke.

muste be vsed more leuere and harde remedyes  
with instrumentes, as hokes, tongues, and such  
other thynges made for the nonce. And syrft  
the woman muste be layde a long vpryght, the  
middle part of her bodye lying hier then all the  
rest, companyed of women assyding her about,  
to comfort her, and to kepe her downe, that  
when the byrth is plucked out, she rysle not with-  
all. Then let the Midwyse annoynt her leste  
hande with the oyle of whyte Lillies, or other  
that maye make it soople and smothe, and hol-  
ding out her fingers shutting together her hand,  
let her put it into the Matrix to seele and per-  
ceave after what fashon the dead byrth lyeth in  
the Mothers wombe, so that she may the better  
put in hookes, and suche other instrumentes to  
plucke it out withall.

If so be that it lye the head forwarde, then  
fasten a hooke eyther vpon one of the eyes of  
it, or the roofe of the mouth, or vnder the chin,  
or on one of the shoulders, whiche of these partes  
shall seeme moste commodious and handsome  
to take it out by, and the hooke fastened, to  
drawe it out very tenderlye for hurtyng of the  
woman.

But yf it lye the feete forwarde, then fasten  
the hooke on the bone aboue the priuie partes,  
or by some rybbe, or some of the backe bones, or  
of the brest bones: and when this hooke is thus  
fastened, the Midwyse may not by and by drawe  
and plucke at it, but holdyng it in her leste  
hande

The second booke. Fol. xciij.

hande, let her with her ryght hande fasten another in some other parte of the byrth, ryght a-  
gainst the fyrt, and then tenderly let her drawe  
both together, so that the byrth may proceede  
and come foorth on both sydes equally, mouyng  
it from one syde to another, tyll ye haue gotten  
out altogether, and nowe and then to helpe it  
in the commyng foorth with the forefynger well  
annoyned, yf it chaunce to sticke, or to be lette  
any where: and as it commeth foorth, alwayse  
to remoue the hooches farther and farther on the  
dead byrth.

Agayne, yf it chaunce that one of the han-  
des onely of the byrth do appeare, and that it  
can not conueniently be reduced and returned  
bywarde agayne, by reason of the narownesse  
of the place, then bynde it with a linnen cloth  
that it slyp not by agayne, and then to plucke it  
out warde bnyss such tyme that the whole arme  
be out, and then with a sharpe knyfe cutte it of  
from the body, and euен so do yf both handes  
appeare fyrt at once, or one legge, or both, yf  
they can not be returned backe to be otherwyse  
taken out conuenientlye. As ye cutte the armes  
from the sholders, so lykewyse cuttyng the  
legges from the thyghes, for the whiche purpose  
the Chyrurgions haue meete instrumentes  
made for the nonce, with the which suche legges  
and armes may soone be cut fro the body. These  
partes being once resekte and cutte from the bo-  
dye, then turne the rest, so that it maye easlye  
proceede with as lytle paine to the mother as

Pi

maye

## The second booke.

may be.

If it be so that the chyldes head be so swollen by inflation, swellyng, or resort of humours, that it wyll not conueniently issue out at that narowe places: Then let the Wydwysse with a sharpe penknysse cutte open the head, that the humours conteyned in it may issue and runne foorth, and so the head to ware lesse, able to be plucked out: But ys it be so, that not by anye suche casualtie the head be bygge, but onylе of a naturall growth, then muste the head be broken in peeces, and the partes euermore taken foorth with suche instrumentes as the Chirurgions haue redy and necessarie for suche purposes.

Agayne, ys that after the head were come foorth, yet the breast part woulde not folowe for greatnessse: Then must ye breake and cut lykewysle that part, vnto suche tyme that it may be had foorth. And euē so lykewysle ys all the reſe of the body shoulde be so swollen that it woulde not proceede ne come foorth: then muste it lykewysle be broken in peeces, and so had foorth.

Farthermore, ys by chaunce or disease it come to passe, that the mouth of the Matrix be exacerate or appostumate, so that the passage be made the narower by that meanes, the dryer, and the more contract: then must ye fyrt studye and endeavour you to soople and ease the places by oyles and other greaces, suche as I speake of sufficiently before in the fourth Chapter, with bates and fumigations.

Sixt

70

Also

The second booke. Fol. xxv.

Also yf the dead byrth come sydelong, then  
must ye do what maye be done to conuerte and  
turne it to suche fashion, that it may mosle easylē  
lye be brought foorth. The Matrix and other  
secretes must be annoyncted, perfumed, and va-  
poured with such thinges the whiche may make  
it more ample and large. If it can not be thus  
had foorth whole, then let it be cutte out by peece  
meale, as is before spoken of. And yf after this  
delyuerance the flowres issue ouer behement-  
ly, then vse suche thinges as haue vertue to re-  
strayne them, of the whiche I haue spoken in  
the vi. Chapter before.

But contrarye to all this, yf it chaunce that  
the woman in her labour dye, and the chylde  
hauyng lyfe in it: then shall it be meete to kepe  
open the womans mouth, and also the neather  
places, so that the chylde may by that meanes  
both receave and also expell ayre and breath,  
whiche otherwyse myght be stopped, to the de-  
struction of the chylde. And then to turne her  
on the leste syde, and there to cut her open, and  
so take out the chylde. They that be borne  
after this fashion are called Cesars, for be-  
cause they be cutte out of theyr mothers

belly: Whereupon also the noble

Romayne Cesar the fyfte  
toke his name.

Pū CIn

## The second booke.

In the last Chapter of this booke be briesely  
recited certayne expert medicines, whiche be  
most requisite to the cheele purpose  
intended in this present  
booke. Cap.r.

**G**yl somuche as the principall en-  
tent and ende of this boooke is, to  
shewe the meanes and medici-  
nes whereby the womans la-  
bour may be made the more ea-  
sie: therefore here I wyll com-  
pendiously set forth certayne midicines, oynt-  
mentes, and emplasters, suche as shalbe suffi-  
cient and moste requisite to that purpose, and  
suche agayne as hath ben well experimented  
and practised: The whiche also it shalbe conve-  
nient (for them that may) alwayes to haue in  
a redynesse agaynst theyr tyme of neede. For  
although that nature be the cheese and head  
doer in all this busynesse, (as in conception,  
baryng, and the byrth:) yet notwithstandingyng,  
medicines many tymes do helpe, ayde, and so-  
tifie nature, beyng sometyme impedit and lette,  
yea, impotent and not able to do her office as  
shoulde appertayne.

When the tyme then of the womans labour  
is come, yf she labour long and painefullly, and  
yet the byrth do not proceede: then for the more  
expedite and quicke delyueraunce, geue her of  
this medicine folowyng.

**T**ake of the fynd Cynamome that may be  
chosen

The second booke. Fol. xvi.

chosen. iii. drammes, and with a sharpe knyfe  
lyst shred it in very small peeces, and then beate  
it to very fyne powder.

Item of Saffron dryed by the fyre tyll it be blac  
kyshe, of Cassia lignea, fyne Reubarde, Sauine  
dryed, Myrrhe, of eche of these seuen scruples, of  
pure Muske. xvi. graynes, euery of these simples  
exquisitely by them selues powdred, and then  
perfectly myred in one, with .vi. or .vii. droppes  
of Maluesey, temper the whole mase into lyttle  
roundels or trochiskes, eche wayng a dramme.  
And in tyme of neede at the womans labour,  
geue her hardly the wayght of .vi. d. of these tro-  
chiskes beaten into fine powder, with .iv. spone-  
fulls of Hysope water, and other. .viii. of good  
wine secke.

This midicine is not onlye profitable at this  
tyme to prouoke the byrth, but also is notablye  
good to expell the after byrth, or anye other suche  
lyke matter in that place, hauyng neede of ex-  
pulsion.

Item, ys neede do so require, it shalbe very  
expedient to haue this emplaster folowyng, in  
a redynesse, the whiche spread abroade vpon a lyn-  
nen cloth, either els vpon leather, and so applyed  
to the bottome of the bellye in as large maner  
as maye be, dilateth and openeth the pores of  
that partes, amplifieth, enlargeth, and dissolueth  
them, whereby that that is contayned in the bel-  
lye syndeth the freer issue, to the lessie greeuaunce  
of the mother.

Take of Emplastrum de Melliloto, of Diachilon, of

P iii

Oxycroceum,

## The second booke.

Oxycroceum, of eche two ounces, of the rootes of Asarum, of wyld Peppe dryed, the leaues of Benioim, of tosted Cummin, of eche two draymes, of good Castorium, iiiij. draymes, of the oyle of Dill one or two spoonefulls: such of these as are to be powdered, beate them syne, and then ouer a soft fyre temper them altogether perfectly.

Item, the same emplaster may serue to be layde ouer all the bottome of the bellye and the priuie passage, to prouoke and drawe foorth the latter or hynder byrh yf neede be: But yf that be not strong enough, then lay to this plaster following, whiche is of muche more efficacie, force, and strength.

Take of Galbanum, Ammoniacum, Serapinum, Myrrhe, of eche an ounce, of Colloquintida, Heleborus niger, of eche two drams, of Castorium, Perethrum, and Storax liquida, of eche three drammes, of Turpentine and Petroleum, of eche fourre drammes. Fyrst ouer a soft fyre temper the Turpentine, Petroleum, and Storax liquida, together, then thereto adde Colloquintida, Heleborus, Castorium and Perethrum, beyng fyrst well and finely beaten to powder: after put to the Galbanum, Ammoniacum, Serapinum and Myrrhe, beyng fyrst dissolved in good Maluesey, and so take it from the fyre, and labour it with your handes. This plaster is of great effect to prouoke the after byrh.

Item, unset Leekes stamped and fryed with butter, and so layed plasterwyse to the belly serach well for the same;

CHAP. CXXVII.

iiiij. ff.

Item,

Item, the leaues or flowres of Marygoldes  
drunke with whyte wine, expell the after byrth:  
Also the sayde leaues and flowres dried, and at  
tyme of neede, kyndeled with a ware candle, and  
the fume thereof receaued vnderneath into the  
priue part, prouoketh out merueylously the af-  
ter byrth.

Item a comfortable potion, to be taken after  
the delyueraunce of the chylde.

Take of the sweetest garden Myntes, greene  
or drye, of the leaues of Baume greene also or  
drye, of the leaues of Maioram, the rootes of Fe-  
nelli the pyth taken out, the flowres of Buglos,  
of Rosemarye, of Ruds, of Borage, and of dry-  
ed red Rose leaues, of eche of these halfe a hand-  
full, more or lesse as it pleaseth you, of Cloues  
and Mase brused a lyttle, the wayght of two  
pence, of Cinamome shredde in small portions  
the wayght of. vi. grotes, knyt all these together  
in a cloute or lyttle lymen bagge, and hange  
the same bagge in a quart of Borage water the  
space of a daye and a nyghte: then take out the  
sayde bagge, and reserue the water, of the whi-  
che take one halfe, and the other halfe of pure  
wine Secke, or elis Muscadell: and beyng myct  
together, put thereto a lyttle of the conserue of  
Barberies, conserue of Borage flowres, con-  
serue of Rosemarie flowres, and dynke hereof  
euerye day the space of foure or syue dayes, at  
once foure spoonesfulles of the water, and other  
foure of the foresayde wyne. And this potion  
shall both confort the woman, and also helpe

## The second booke.

greatly to the expulstion of all noysome thynges  
to be expelled.

And here it is worthy to be noted, that where  
as it is a common vslage to geue often to women  
in theyz chylde bed caudels of Otemeale, thyn-  
kyng and saying thereby the woman to be scou-  
red, whereas in deede the sayde Otemeale is a  
notable bynder and dryer: Therefore ye shall un-  
derstand, that the ryght vse thereof is, to geue it  
to suche as haue alredye ben well and sufficient-  
ly scoured and cleansed from theyz after byrth,  
and other thynges to be looked for in this tyme  
and case: but ys the woman be not sufficiellye  
purged alredy, then geue her no Otemeale cau-  
dels, ne other thynges that may bynde.

And thus I make an ende, praying the wo-  
men readers hereof, to accept and suffise them  
selues with these fewe medicines here in this  
Chapter mentioned, and often by me and other  
practised. The which thyng ys they shall do so,  
it shall (no doubt) be occasion to me the sooner  
to retake this matter in hande agayne, and to  
refreshe and furnysh the same with newe and  
much more excellent experiences then hath ben  
yet hytherto read or seene in any booke concer-  
nyng such matters.

And as touchyng the aboue Trochishes and em-  
plasters described here in this place, ye shall fynde  
them alwayes redye made in

Boucklers berie in  
London.

The thyde booke. Col. xviii

In this first Chapter of the thyde booke,  
is synt declared the matters therein conteyned,  
and then howe the Infant newely borne  
must be handled, noscryshed and  
looked to. Cap.l.

The second booke what is to  
we haue sufficient- be done  
lye and at length when the  
declared the ma- chylde is  
ners, fashions, and borne.  
diversities of by-  
thes, with the dañ-  
gers and perylles  
often chaunsing to

the Women at theyr labours, and after  
the same. And nowe here in this thyd  
booke shalbe entreated what is to be  
done to the infant borne. And howe to  
choose a Nurse, & of her office: With ma-  
nyfolde medicines, & remedies agaynst  
sundrie infirmitie, which eftsones hap-  
pen to Infantes in theyr infansie.

Then after that the Infant is once come to  
lyght, by and by the Nauyll muste be cutte three  
syngers breadth from the belly, and so knytte vp,  
and let be strued on the head of that that remay-  
neth, of the powder of Bole armeniacke, and San-  
guis draconis, Sarcocola, Myrrhe, and Cummin,  
of ech lyke muche beaten to powder: then vpon  
that

# The thyde booke.

that bynde a peece of woll, dypped in oyle Olie  
that the powder fall not of. Some vse fyrtle to  
knyt the Nauyll, and after to cutte it so much, as  
is before rehearsed.

And furthermore some saye, that of  
What length the reste of the Nauyll is  
left, of the same length shal the chyldes  
tong be, if it be a man child. Itē Auicenna  
saith, that divers things may be know-  
en by markyng of the chyldes Nauyll:  
For (as he sayth) When the Woman is  
delinered of her first chyld, then behold  
the Nauyl of the child: which yf in that  
part of it which is next vnto the body it  
haue never a Wrinkle, it protendeth and  
doth signifie perpetuall from thence-  
forth sterilitie or barennesse: and yf it  
haue any Wrinkles in it: then so manye  
Wrinkles, so many chyldren shal the Wo-  
man haue in time to come. Also some ad-  
to this, and say, that if there be little space  
betwene these Wrinkles in the nauil, the  
shal there be also little space betwene the  
bearyng of the children: if muche, it sig-  
nifieth long tyme betwene the bearing  
of them: but these sayinges be neither in  
the Gospell of the day, ne of the nyght.  
Nowe

The thyrde booke. Fol. xcix.

Nowe to returne to our purpose, when that  
the Nauyll is cut of, and the rest knytte vp: an-  
noynt all the chylde's bodye with the oyle of A-  
cornes, for that is singularly good to confirme,  
stedfast, and to defende the body from noysome  
thynges, whiche maye chaunce from without,  
as smoke, colde, and suche other thynges: whi-  
che if the Infant be greeued withall straight af-  
ter the birth, beyng yet verye tender, it shoulde  
hurte it greatly.

After this annoyntyng, washe the Infante  
with warme water, and with your synger (the  
nayle beyng pared) open the chylde's nose-thryl-  
les, and purge them of the sylthynesse. And also  
that the Nurse handle so the chylde's sytting  
place, that it may be prouoked to purge the bel-  
lye. And cheefely it must be defended from ouer-  
much colde, or ouermuch heate.

After that the parte extant or the knotte of  
the Nauyll is fallen (the whiche commonlye  
chaunceth after the thyrde or fourth daye) then  
on the reste remaynyng, strewe the powder or  
Ashes of a Calfes hoofe burnte, or of Snayle  
shelles, or of the powder of lead, called red lead,  
tempered with wine.

Furthermore, when the Infante is swadde-  
led and layde in Cradell, the Nurse must geue  
all diligence and heede that she bynde every part  
ryght, and in his due place and order, and that  
with all tendernesse and gentle entreatyng,  
and not crookedly and confuseley, the whiche

also

# The thyrd booke.

also must be done ostentymes in the day, for in this is it, as it is in young and tender ympes, plantes and twygges: the whiche, euen as ye bowe them in theyr youth, so wyll they euermore remayne unto age. And euen so the Infant, ys it be bounde and swadled, the members lying ryght and strayght, then shall it growe strayght and bryght. If it be crookedly handled, it wyll growe lykewyse. And to the yll negligence of many Nourses, may be imputed the crookednesse and deformitie of many a man and woman, whiche otherwyse myght seeme aswell fauoured as any other.

By the on-  
ly negly-  
gence of  
Nourses  
many childe  
groweth  
crooked,  
& wryte  
legged.

Item, let the chylde's eyes be ostentymes wyped and cleansed with a fyne and cleane lynnyn cloth, or with sylke. And let the armes of the Infant be verye strayght layde downe by the sydes, that they may growe ryght, and somtyme strokyng the belly of the chylde before the belyche or bladder, to helpe to ease, and to prouoke the chylde to the makynge of water: and when ye lay it in the Cradell to sleepe, sette the Cradell in liche a place, that neither the heames of the Sunne by day, neyther the Moone by nyght come on the Infant, but rather set it in a darke and shadowy place, laying also the head euer somewhat hyer then the rest of the body.

And farther, let it be wasshed two or three tymes in the day, & that anone after sleepe, in the Winter with hott water, in the Sommer with luke warme water: nether let it tary long in the water, but unto liche tyme as the bodye begyn to

# The thirde booke. Fol. C.

to ware red for heate, but take heede that none of  
the water come into the infantes eares, for that  
should greatly hurt his hearyng another day.

Then, to be short, when it is taken out of the  
bath, let it be wyped and dryed with gentle and  
soft linnen clothes warmed, and then to laye  
it on her lappe the backe vpwarde, the whiche  
with her handes let her tenderly stroke and rub,  
and then to lappe it vp, and to swaddell it, and  
when it is swadled, to put a droppe or two of  
water into the noiset hylles of it, is very good for  
the eye syght. And so to lay it to rest.

C Of the Nurse and her mylke : and howe long the  
chylde shoulde sucke. Cap. ii.

**A** **S** concerning the bryngyng vp, nourysh-  
mente, and geuyng of  
sucke to the chylde, it  
shalbe beste that the  
mother geue her chyld  
sucke her selfe, for the  
mothers milke is more  
conuenient and agree-  
able to the Infant,  
then any other wo-  
mans, and more doth it nouryshe it, for because  
that in the mothers belly it was wont to the  
same, and fed with it, and therefore also it doth  
more desyrouslye couet the same, as that with  
the which it is best acquaynted. And to be short,  
the mothers mylke is most hol sommest for the  
chylde,

The mo-  
thers mylke  
best & most  
familer to  
the chylde.

## The thirde booke.

chylde, as Auicenna wryteth, it shalbe sufficient to geue it sucke twyse or thryse in a daye. And alwayes beware ye geue not the chylde to muche sucke at once in this tender age of it, for cloyng of it, and least also it lothe it: but rather let it haue often of it, and lyttle at once, then fewe tymes, and ouermuche at once. For such as be ouer cloyed with the mothers mylke, causeth theyr body to swell and inflate, and in theyr brine shal it appeare, that it is not overcome ne concoceted or digested in the chylde: which thyng yet ys it chaunce, let the Infant be kept fastynge vntyll such tyme as that which it hath receaved alredy be completely digested.

Item, ys the mothers mylke be somewhat sharpe or coleryke, let her never geue the chylde her breast fastynge. If it be so that the mother can not geue the Infant sucke her selfe, eyther for because of sycknesse, or that her breastes be soze, and her mylke corrupted: then let her chose a holsome Nourse, with these conditions folowynge.

To chose a  
good Nurse.

Fyrste that she be of a good colour and complexion, and that her bulke and breast be of good largenesse. Secondly, that it be not to soone ne to long after her labour, so that it be two monethes after her labour at the leaste, and that (ys it may be) such one whiche had a man chylde.

Thridly, that she be of meane and measurable lykyng, neyther to fatte ne to leane. Fourthly, that she be good and honeste of conuersation, neyther ouer hastye or yresfull, ne to sadde or somme

# The thirde booke. Fol. C

lome, neyther to fearefull or tymorous: for these affections and qualities be pernicious and hurtfull to the mylke, corruptyng it, and passe foorth through the mylk into the childe, makynge the chylde of lyke condition and maners. Also that they be not ouerlyght and wanton of behauour. Fyfthly, that her breastes be full, and haue sufficient plentie of mylke, and that they be neyther to greate, softe, hangyng, and flaggyng, ne to lyttle, harde, or contracte, but of a measurable quantitie.

Also looke vpon her mylke, that it be not blackyshe, blewyshe, grey, or redyshe, neyther sower, sharpe, saltyshe, or brackyshe, neyther thynne and fluy, neyther ouer grosse and thycke, mylke. The conse-  
deration of  
the Nourses

And to be shor, that mylke is best and mosse to be chosen, of the which a droppe beyng mylked softly vpon the nayle of the thumbe, holdyng your synger stylle it rolleth not of, neyther flyteth abroade, but ys ye moue your hande a lyttle it wyll flyde of by and by: but ys when it is mylked on the nayle it spreade abroade, and flyt by and by, then is it to thyn, but ys it cleave stylle when that ye moue a lytle your hande, then is it to spysse and thicke. The meane betweene both is best.

If it be so that the Nourses mylke be to hot, sharpe, or colericke: then let her never geue the chylde luke, her selfe beyng fastyng.

Sometyme it charnceth that the mothers or Nourses mylke doth sayle or decrease, the whiche

## The childe booke.

Diners cau which thyng may come by dyuers causes: as by  
ses of the de- sicknesse, by disease in the breastes, or by takynge  
fect or say- of colde in the same, and so stoppe and cludder  
ing of mylk the mylke, or for because she lacketh suche thyn-  
ges the which myght engender mylke , other by  
ouermuch fastyng, hunger and thyrist, the which  
causes muste be well consydered : and then ac-  
cording to that, minister a remedie.

Thynges which do augment and encrease mylke be these.

Lette her vse to eate Parslypp, eyther the seede  
or the roote: also the seede or roote of Fenyll, sod-  
den in the broth made with Barley or Cicercula,  
let her eate of that with other meates that she  
seedeth on.

Item, to eate sheepes breastes, and the mylke of  
them is good.

Item, take an ounce of cowe butter, and dis-  
solue it in warme whyte wine, the whiche let the  
Nurse dynke.

Item, boxyng vnder the breastes doth well,  
without scarification.

Item, a plaster for the same of frankencense,  
Masticke, and Pitche, layde to the breastes, or  
vnder the breastes, the skynne fyrste beyng an-  
noynted with oyle, least it shoulde cleave ouer  
last to the place.

Item, it shalbe verye good to rubbe softlye  
with the hande the breastes, or els in bathynge  
after dynner or supper, to cause some to sucke her  
breast.

Item, take the oyle of whyte Lyllyes, or of  
violettes, and myngle with it Muske, Ensence,  
and

# The thirde booke.

Fol. Cii.

and Laudanum, well tempered together, in the same dyppe a peece of woll, and clappe it to the brestes, and soke them with it.

Item washe them, and soke them often tymes with wine, in the whiche is decocte and sodden Mintes, Roses, Violettes, and Xiloaloes. Also to eate of the broth in the whiche is sodden a Hen, with Cinamomie, Maces, Cardamomum, and also the yolke of an egge.

Item it is good for her to eate freshe Cheese and mylke, and to refrayne from all maner of great labour and harde workes.

Also potage made of beane meale, ryce, and bread made of fine flovre, tempered with Milke and Suger, putting to it also a quantitie of Fenell seede, or of the leaues, is very good for her. Item take of Annis seede, of Siler montanum, of eche three drams, of Christall beaten to powder two drams, & as muche of Suger, geue her this to drinke about ten dayes, at morryng, euening, and myd day.

Item take of Fenell seede, or the leaues, and of Horehounde, of eche two handfulls, of Annis seede fourre drams, of Safron beaten one scruple, also of freshe Butter three ounces, and seethe all these in sufficient water, makyng hereof a plaster, the same plaster whilste it is hoate, laye it to the Nurses brest.

Item take of Cummin seede an ounce and an halfe, & of clarified Honey three ounces, seethe it in ffe pyntes of water altogether put into a newe pot, and let it seethe to the thirde parte, and

### The thirde booke.

of this decoction geue the Nurse oftentymes to drynke.

Item take of Beetes well washed one ounce, of Cummin halfe an ounce, of Honye sixe ounces, of these myngled and tempered together, make an electuarie, of the whiche let her take both in the morwyng and euening, at eche time a sponefull.

Item take two drams of Crystall beaten into fyne powder, and diuide that in foure equall partes: one of these partes geue unto the Nurse, the space of foure dayes to drynke, with broth made eyther of Cicer, or elles of peason.

Also all these thinges folowyng, encrease and augment Mylke in the brestes: Annise, and Annis seede, Dyll and the seede, Horehounde, Cardamomum, freshe Cheese, Mortes made of olde Cheese, Cicer, Cristal beaten to pouder & taken with Honys, Lettuce, Fenel, wine in whiche Rosemarye or Sauery be sodden.

Company  
ing with  
men corrup-  
teth the nur-  
ses mylke.

Item to abstayne from venery or mans company: for ys she vse that, it shall spende and consume the Mylke, and make it vnslavery and vnholosome, neyther can the chylde well brooke it, but mooste commonly shall cast it vp agayne, because it can not digest it.

Also it shalbe beste that the chylde sucke not of the Mothers breste by and by, as soone as it is borne, but rather of some other womannes, for a day or two, for because that the creame (as they call it) straight after the byrth, the fyfth day

In all women doth chichen and conigle.

Item, ys it chaunce that the Nurse be ouer sore laxed, or that she be ouer bounde, so that she take anye medicines to remedie it: then let another geue the chylde sucke whylest she be recovered agayne. And when the chylde is layde in cradell to be rocked, rocke not to fasse, leaste through ouer much rocking and styringe, the chyldes stomacke turne, and the Wythe there corrupt for lacke of rest.

Auisen aduiseith to geue the chylde sucke two yowe long  
yeares: howe be it amonge vs molte common-  
ly, they sucke but one yere. And when ye wyll  
weane them, then do it not sodenly, but a little  
and little, and to make for it little pylles of  
bread and Suger to eate, and accustome it so,  
till it be able to eate all maner of meate: and  
this shall suffise for the education and bringing  
vp of infantes at this tyme. Notwithstandyng  
dyuers other thynges here are left vnspeaken of,  
another tyme God wylling we shal declare them  
at large.

**C**Of diuers diseases and infirmities whiche  
chaunce to chyldren lately borne, and the  
remedies therfore. Cap. iii.

Lthough there be in ma-  
ner infinite diseases which  
happen the Infantes, as  
writeth Hipocrates, Galenus,

**A ii**

Rasis,

Many disea-  
ses of In-  
fantes.

### The thirde booke.

Racis, Auicenna, and diuers other : yet for  
bretuitie and shortnesse we wyl rehearse  
here onlye suche of them whiche moste  
commonly happen to the same , & that  
be these : exulceration of the gummes,  
sivre of the belly , or ouermuch loosenes  
of the same , the belly harde bounde, the  
crampe, the coughe and distillation of  
the head, shorte wyndnes , bladders on  
the tongue , exulceration or clypping of  
the mouth , apostume in the eares, apo-  
stume in the brayne , swelling and bol-  
nyng of the eyes, skumme or creame of  
the eyes , the feuer, knawyng in the bel-  
lye , the body swelling and puffed vp ,  
often sneesing , wheales or bladders of  
the body , swelling of the coddes , swel-  
ling of the Manyl , unslepinesse , yexing ,  
appetite to parbreak , fearefulnesse in  
the dreames , the mother issuyng out of  
the fundament gutte , wormes in the  
bellye , chaufyng , the fallyng sicknesse ,  
the consumtion , the palseye , trembyng  
of the partes of the body , the stone , gog-  
gle eyes .

Hov

Howe to cure and to remedie all these, now  
wyl I shewe in order.

**F**Irst in exulceration of the gummis, are exulces-  
wont certayne pushes, and as it were whea- ration of  
les to growe on the gummis, or in the cor- the gums.  
ners of the iawes, the whiche put the place to  
muche greuaunce: and to remedie this, it shalbe  
good that ye with your synger rubbe the infan-  
tes gummis, and the pushes or whelkes withal,  
and then to annoynt the same gummis with  
oyntment made of Hennes grece, Hares or Co-  
nyes brayne, oyle of Camomell mixt with hony:  
then take water, and in it seethe Camomell and  
Dyll, the whiche water beyng hoate, powre it  
on the chyldes head, holdyng it a foote aboue the  
head.

**C**Of the fire and ouermuch loosenes  
of the belly.

**F**or this take the seede of Roses, Cumin,  
Anise, and the seede of Smallage, beate  
all these together, and make them plaster-  
wyse, and lay it to the chyldes belly.

And farther, yf that it whiche the infant boy-  
deth be of redde or yelowe colour, then geue it  
to drynke of the syrope of Roses, or of Crabbes,  
other els of Pomegranates, tempered with a li-  
tle Wynte water.

Item, take the seede of Sorell, and beate it,  
then temper it together with the yolke of a

**N** iii rosted

## The thirde booke.

rosted egge, and geue that to the chylde to eate, or  
els take of the same seede bruised fyrt, and then  
seethe it in fayre runnyng water, thereof let the  
chylde dynke two or three tymes the day.

Item take a gall, and beate it to pouder, then  
seethe it in water, with this water temper Bar-  
lye meale, or the meale of Mellium, and make  
a plaster of it, the whiche laye vnto the chyldes  
belly.

Item, ys that that commeth from the chylde  
be whytyshe, then take of Nutmeggs the weight  
of a peny, and of whyte frankencense a scrup-  
ple, or the weyght of two pence, the which tem-  
per with the iuyce of a Quince, and geue it to  
the chylde to dynke.

Item, take the meale of Barley, temper it  
with the iuyce of Plantane, and a litle Vaine-  
ger, and make it plasterwyse, and laye it to the  
chyldes belly, but beyng fyrt a litle boyled to-  
gether ouer the fyre.

Item, take the iuyce of Centinodium, and  
the whyte of an egge, and temper them together,  
to the whiche adde the powder of dryed red Rose,  
the powder of Hematites, Masticke, Fran-  
kencense, Bole armeniak, Sanguis Draconis, &  
the rindes of Pomegranate, of all these mired to-  
gether make a plaster, and lay it (fyrt warmed o-  
uer the fyre) to the Infantes belly.

Item, to washe the chylde with the water in  
the whiche be sodden leaues of redde Rose, is  
very good.

Item, take the iuyce of Camfely, and the iuyce of

of Plantane the more and the lesse, and in this  
put claye of an olde furnesse or Ouen, and make  
of it a plaster, and lay it to the chyldes belly.

**C**To vnloose the chylde beyng bounde.

If the chylde be so bounde, that it can not  
long tyme haue any stoole, then make a sup-  
positarie of Hony, sodden till it be harde and  
massye, and let the suppository be of the length  
of your little finger, and the bignesse of two  
wheate strawes bounde together, then dippe it  
into oyle, and conuey it into the chyldes foun-  
dement.

Item, lyke wyse ye may make a suppositor of  
the stalkie and the roote of Beates, or els of the  
roote called Dresse or flouredelice roote, made  
of the quantitie before spoken, and conuayed in-  
to the sitting place of the childe.

Item, to geue to the Infant as much Hony  
as a pease to drynkie, and to rubbe the belly a lit-  
tle, and to couple it with a peece of wooll dipped  
in oyle, or dipped in Bulles gall, and layde to  
the Nauell.

Item, ye may geue vnto the Nurse a medi-  
cine whiche hath vertue to vnbynde and loose,  
and the next day after let the chylde sucke her,  
and it wyll loose also the chylde.

Item, take of small Mallowes, of great Mal-  
lowes, of eche an handfull, of Senegreke a Line-  
seede of eche an ounce, of Holyoke two ounces, of  
figges the number of .x. seethe all these together  
in water, and then stampe them in a morter, and

## The thirde booke.

put vnto it of Butter and of Hennes grece of  
eche two ounces, and of Saffron one scruple,  
and make a plaster of it vpon a linnen cloth , of  
the thicknesse of a straw, and lay it to the chyldes  
belly, a day and a nyght.

If this moue not the belly, then take of Aloes,  
Cicctrine one dram, of Heleborus both niger and  
albus, of eche .xb. graynes, beate these to powder,  
then temper them with three sponefulls of the  
suyce of Walwurt, or of Ore gall, in this licour  
dippe woll, and lay it to the Nauell the breadth of  
a hande, and bynde it to the place.

Item, take the iuyce of Walwurt and of Mill  
meale, & seethe those together, till they be thicke,  
then make a plaster thereof, and lay it to the belly  
beneath the Nauell.

### C Remedie for the crampe or distention of the members.

If it chaunce that the infante be taken with  
the disease called the crampe , the whiche for  
the moste part commeth of indigestion, and  
of the weakenesse of the power attractiue, and  
specially in such chyldren the whiche be verye  
fat and moyste, then shall ye annoyn all along  
the backe of the infante with the oyle of blewe  
flowredelice, or els white Lillies, either the oile  
of Rue.

If the crampe take the chylde whylest it stret-  
cheth foorth the armes, legges, and other mem-  
bers(as we be wont in gaping or fanyng) then  
let

The thirde booke. Fol. Cbi.

let it be bathed and washed in water, in the  
whiche prime Rose, Coullappes, or the flowres  
of Camomell be sodden, or els amoynt it with  
the oyle of violettes, and the oyle of sweete Al-  
mons tempered together: and if the chylde be in  
greate heate, amoynt him with the oyle of vio-  
lettes, or with oyle Olyue, tempered with a little  
whyte waxe, and also powre on the childes head  
the oyle of violettes.

Remedie for the cough and distillation, or  
Catarrhes of the head.

Sometymes the chylde is soze en-  
sombred with the coughe, and with  
distillation or running of humours  
out of the head, to the nose, the mouth, &  
the brest, y which ye shal remedy thus.

Syrt powre warme water on the chyldes  
head, holdyng it a foote and a halfe from the  
chyldes head, and so do continually the space of  
halfe an houre, and in the meane whyle put a  
little Honey on the chyldes tongue to chawe up-  
pon: then put your synger into the chyldes  
mouth, and depresse or holde downe the inner-  
moste part, or the roote of the tongue nexte to the  
throte, to prouoke the chylde to vomite, and to  
voyde the grosse and viscouse humours whiche  
be cause of this yll.

Item take Gumme Arabiche, Gumme Dra-  
gant, the seede of Quinces, the iuyce of Ly-  
coris, and Sugerpenedium, all this beaten to-  
gether

## The thirde booke.

gether, geue every day to the chylde a quantitie  
with Wynde newe mylked.

Item, make Almonde mylke, with Almondes  
blanched, and only the iuyce or water of Fenell,  
wherof when it is well sodden, let the chylde  
eate or drynke morryng and eueryng, or anye  
other tyme of the day.

And ys it be so that the cough haue exasper-  
rat and made rough the tongue and the roose  
of the mouth, then take of the seedes of Duin-  
ces two sponefulles, bruise them a little, and  
lype them in warme water the space of two or  
three houres, then strayne the viscouse & grosse  
water from them through a strayner, and that  
remayneth, frye it together in a frying panne  
with Suger Penidium, and the oile of sweete al-  
mondes, thereof makyng an electuarium, the  
whiche geue vnto the chylde to receaue: ys the  
chylde haue great heate with the cough, then ad  
vnto the same electuarie, the iuyce of a sweete  
Pomegranate.

Item agaynst the cough and ouer muche  
heate, take the seede of white Popie and Dra-  
gagant, of ech two drams, of the seedes of Go-  
wardes fourre drams, and beate all these toge-  
ther, and geue at once the weight of fourre pence  
to the chylde, with the water in whiche reasons  
haue ben sodden.

Item, take Reasons, and doyng away the  
graynes of it, seeth them together with water  
in a frying panne, so that they burne not to the  
bottome of the panne: then take it from the fyre  
and

## The thirde booke. Fol. Chii.

and beate it well in a morter, temperyng ther-withall Suger Penidium, and geue of this in the mornynge and euening to the chylde.

Agayne, yf the cough come of a colde cause, then take a litle Myrrhe beaten to powder, and temper it with a quantitie of warmed Hony, and the oyle of sweete Almondes, and of this geue vnto the chylde.

Furthermore the Nurse must auoyde all such thinges, the which may engender cough, as vi-neger, ouer muche salted meates, Cheese, Nuts, & all sharpe thinges. Also she must annoynct the chyldes brest with butter, and with Dialthea.

Item, for the cough, take Reasons and frye them in a frying panne, then stampe them in a morter, and to that adde as muche of Suger Penidium, with a litle oyle of Violettes, & make an electuarie of these, and geue to the chylde the mountenaunce of a hasell Nut.

Remedy for short wynde.

**M**any tymes chaunceth also to Infantes difficultie of brething or short windnesse: the which to remedie, take Linseede, and beate it, & geue of it vnto the chylde with Hony: but yf the disease encrease on the chylde, and that the wynde pipes in maner seeme stopped, then annoynct well the eares, and all the places about the eares with oyle Olyue, and also the tongue, for to prouoke vomite, and then powre a li-tle warme water into the chyldes mouth to washe it withall, and geue to it a litle Lineseede, tempered with Honye and beaten, made after the

## The thirde booke.

the fashion of an electuarie.

Item, yf the chylde haue besydes this also the  
slix: then geue vnto it the Syrope of Myrtys,  
other els Dates sodden with Milke and flowre.

Against wheales or bladders on the tongue.

Item, sometymes happeneth to the  
chyldyn Wheales and blisters on theyr  
tongues and mouth, Whiche thinges  
commeth of the sharpenesse and eager-  
nesse of the Nurus mylke, the mouth  
and tongue of the Infant beyng so ten-  
der, that the least thing that toucheth  
it, shal offend it: wherfore, besides that  
it is great Payne to the chyld thus to be  
blistered by the eagernes of the milke, it  
is also very perillous and daungerous.  
For suche Wheales which be not ripe &  
seeme blacke, betoken death: whiche yf  
they be Whyte or yellowwyshe, then they  
be of lesse peryll.

Agaynst this yll, take Violettes and Roses,  
and seethe them in a little Rose water, and ther-  
with washe the blysters.

Item, take the iuyce of Letuse, the iuyce of  
Petie

The thirde booke. Fol. Cvi.

Petie morel, and the iuyce of Purselayne, which when they be well commixt and tempered together, annoynyt therewith the whelkes. And if the forelayde blisters or whelkes be blackishe: then adde to the forelayde iuyces, Licorise beaten to powder.

Item yf the same be very moyste, then take Myre, Galles, the rine of Frankencense, beate them wel together, and temper them with Honey, and annoynyt the chyldes tongue therewith.

Item, take the iuyce of Mulberries before they be fully rype, other els of unrype grapes, which is called vergeus, and with that annoynyt the tongue.

Item, it is verye good to washe the tongue with redde wine, and then to strewe vpon it the pouder of Galles, or els of the barkie or ryne of Frankencense.

If ye wyll haue a quicker medicine in operation and sharper: then take Bole armeniake, Plidium, and Sumach, of eche three drams: also of Galles two drams, of Alome one dram, all these beate together, and searle them through a searser, and strewe that powder on the blisters.

Item yf these wheales be reddishe and cause muche spittle to gather together in that place, then let the Nurse vse suche thinges whiche are moyste and colde, and let her chawe in her mouth very small a fewe fatches, of the whiche lay on the Infantes mouth and tongue.

Item Amilum or starch tempered together with

Bole

## The thirde booke.

Rose water, & put on the chylde's tongue, is good.  
Item, take the iuyce of Pomegranates, the  
iuyce of Quinces, or the iuyce of Dranges, and  
do of this on the chylde's tongue in lyke maner:  
but ys the wheales or blysters be somewhat ye-  
lowyshe, then to these iuyces spoken of before,  
adde the iuyce of Lettuce and of Purselayne.  
But ys the wheales seme whytishe, then take of  
Myrrhe and of Saffron, of eche one dramme, of  
Suger candye two drams, and beate these to  
pouder, and lay of it on the wheales and tongue.

### C Of exulceration or clesture, chappyng or chynnyng of the mouth.

S Ometymes by reason of the hardnes of  
the Nurus pappes, the chylde's lippes and  
mouth be exulcerate, hauing in maner of  
clespes & chynnes in them: and in this case take  
tozed wooll, and dyp it in the iuyce of Plantaine,  
or els in Butter molten, or in fresh Hens greace,  
euery of them beyng warme, and with this an-  
noynt the mouth and lippes of the chylde.

### Of appostumation and runnyng of the eares.

**V**H E R that humours and matter  
ysstueth out of the eares, which pro-  
perlye commeth of aboundaunt hu-  
mours in all the bodye, and most  
specially in the heade: then take a  
peece of wooll, and dyppe it in Honey mirt with  
redd wine, to the whiche is put also a litle  
quantitie

# The thirde booke. Fol.Cir.

quantitie of Alome beaten to powder, or of Saffron, then make of the same as it were a tente, and put it in the chylde's eare, and when the tent hath sucked and drawen to it the humours and sylthynesse of the eare, then take it out, and put in newe: and yf that which commeth out of the eare be as matter, then take of sodden Honey, a temper it with water, put of it into the eares: o: els take the pouder of Galles, tempering it with vineger, and do lykewyse.

But yf the chylde haue great payne and dolour by wyndnesse, ventositie, and the humours in this place: then seethe Organy and Myrre with oyle Olyue, and so beyng warme, put of it into the eares.

## Of apostumation in the head.

 If there be any apostume engendered in the head, (whiche many times chaunceth) the which causeth the chekes & eies to be greatly payned, & the eye sight to ware wamyshe or tawrye: then must be applied such thinges whiche may refrigerate and coole the braynes: as, take of the iuyce of Gowardes, and the iuyce of Nyghtshade, iuyce of Purselayne, and temper them with the oyle of Roses, in this dyppe a peece of wooll, and laye it to the head, and as often as it waxeth drye, dyp it agayne.

D

Mark A brief  
51<sup>v</sup> upside  
down.

## The thirde booke.

### C Of the swelling or bolnyng of the eyes.

**A** Gaynst swellyng and bolnyng of the eyes, take Licium, and temper it with womans Mylke, & put of it into the chyldes eyes, and bynde it to the place with a fine and soft linnen cloth, then afterwarde washe the eyes with wa-ter in which Camomel and Basill haue ben sod-den. Yf that in this swelling the eyes be not red, neither the browes swollen: then take Myrrhe, Aloes, Saffron, and the leaues of Roses, and temper all these, and stipe them in olde wine, and binde it to the chyldes eyes with some linnen cloth, and into the chyldes nose put a quantitie of Ambre dissoluied in womans Mylke.

### C Of the scummie or whyte of the eye.

**A** Gaynst the scum or whyte of the eye, which for the mooste parte happeneth to chyldren through ouer muche crying and weepyng, take the iuyce of Solatrum, and drop of the same into the chyldes eye, and yf by the same chaunce the bayne of the eyes ware reddishe, or be swollen, then annoynnt them with the same iuyce.

### C Agaynst immoderate heate, or the feuer.

**I**f the infante be in greate and behemente heate contrary to nature, the whiche is cal-led a feuer: syste it shalbe the Nurses part, to eate and vse suche thynges the whiche coole and moysten,

Also

The thirde booke. Fol. Ex.

Also to geue vnto the Infant of these thynges folowyng. The iuyce of Pomegranate, the wa-  
ter of Gourdes, Suger, with a little Camphere  
mired herewithall, tempered well together.  
Item it is very good to prouoke it to sweatynge.

Item, take of the iuyce of Woormewood, of  
Plantane, Malowes, and Singrene, and tem-  
per them altogether, and seethe them a lytle on  
the fyre, in the whiche also mire Barlye meale,  
and make a plaster of all these, and lay it to the  
chylde's breaste. Also take the oyle of Roses, and  
the oyle of Poplar, and myre them together,  
with this oyntment beyng colde annoynct the  
chylde's forehead, the temples, the armes, the  
handes about the wrytes, and the pulses, and  
the feete about the ancles.

Item, take of Barly meale, and of dryed Roses,  
and powdred, and temper these with the water  
of Roses, and the water of Endiue, and make  
thereof on the fyre a plaster, the whiche laye to  
the chylde's breastes somewhat warme.

Also as often as the chylde is washed, let it  
be done with water in whiche is sodden such  
thynges whiche coole: as Letuce, Purslane,  
Endiue, Plantane, and such other.

Agaynst frettyng or gnawyng in the belly.

If the chylde be vexed with frettyng and  
gnawyng in the bellye, the whiche thyng ye  
shall knowe by the immoderate crying of  
the chylde, and that it turneth from one syde to  
another with great crying: then shall you take

Ri

warne

# The thyde booke.

Warme water, wherein hath ben sodden La-  
uender, Cummin, Senell seede, or the seede of  
Dyll, and oyle Olive, tempering them together,  
and herein dip a peece of wooll, and therewith  
ooke the chyldes belly oftentymes.

## Agaynst swellyng of the body.

**V**hen the chyldes bodye or any parte  
thereof is swollen & puffed vp, then  
take the topes of Elder tree, and of  
Walwurt, and seethe them in whyte  
wyne, and therein lap the Infant,  
speciallye yf it be not taken with ouer greate  
heate: but yf so be that with swellyng in the  
head the bellye be swollen also, the take Myrrhe,  
Aloes epatike, and Saffron, and beate them al-  
together, and temper them with the iuyce of  
Beanes, and lay it to the chyldes head.

## Agaynst often sneeslyng.

**S**ometymes the Infantes be sore troubled  
and vexed with often stermitation and  
sneeslyng: whiche thyng yf it come of the  
apostume in the head, then shal ye minister such  
thynges to the head, whiche refrigerate and  
coole, whether it be oyles, oyntmentes, iuyces  
of the hearbes, or other thynges. If this come  
of any other cause then of apostume: then take  
Basyll be it greene or drye, and put of the iuyce  
or powder of it into the chyldes nose. But yf  
this sneeslyng come and begyn with heate, and  
that the chyldes eyes seeme as they grewe in-  
warde for Payne thereof: then lay to the chyldes  
head

The thirde booke. Fol. Cxi.

head the leaues of Purllane, or Gowarde cutte  
in thyne llyces and tempered with the oyle of  
Roses, and Barley meale, and also the yolke  
of an egge.

Of whelkes in the body, and the cure.

**W**hese whelkes ys they appeare blacke  
vpon the body, they signifie peryll  
of lyfe, and so muche the more, the  
greater quantitie that there is of  
them: but ys they seeme whytyshe  
or reddishe, it is no peryll, and may easlyly be cu-  
red. Wherefore take the leaues of the redde Rose,  
the leaues of Mirtilles, and of Tamariscus, and  
seeth these in water, and in that water wet a lin-  
nen cloth, and soke therewith the whelkes.

Item, lykewyse it is good to annoynite the  
same with the oyle of Roses, of Mirtilles, and  
Tamariscus. If the whelkes be whyte or reddishe,  
then let them be rype before ye minister anye  
thing to them: and when they be open and be-  
gyn to matery, then to cleanse, purifie, and to  
drye them, beyng rype and broken, it is verye  
good to washe the same whelkes with Mulsum  
or Hydromell, in whiche Saltpeter is dissoluued.  
Mulsum and Hydromell is, water and Honye  
sodden together.

Agaynst swellyng of the coddes.

**M**any tymes chaunceth to chyldren (tho-  
rowe ouermuche crying) swellyng about  
the coddes, and sometymes burthenesse,  
**Rii** and

## The thyrde booke.

and swellyng in the inner part of the thyghes, the whiche swellyng sometymes commeth by inflamation or great heate, and sometyme with onlye wyndynesse. If it come of wyndynesse, then the coddes wyll sometymes appeare so stiffe as a tabour, and shyne as it were an horne. The remedye for this is to take a quart of double Beere woort, and therein seethe of the leaues of Bay halfe a handfull, of Rue a quarter of an handfull, of Fenell, Dyl, and Camomell, of eche a meane handfull: cutte and broole all these hearbes together, and seethe them from the quarte to the pinte, then strayne them strongly from the liquer, in the whiche liquer seethe so muche beane flowre as may serue to make a plaster, therto addyng at the latter ende two or three spoonefulles of oyle of Camomell, and lay this plaster hottie to the coddes. If the swellyng come of heate, then alay the same with some colde hearbes, such as I haue often tymes spoken of before.

### C Agaynst swellyng of the Pauyll.

**A**lso sometymes the chyldes Pauyll swel-  
leth, and specially strayght after the byrth  
when it is cutte. For this, take Spyke Cel-  
tyke, and seethe it in the oyle of Almondes, myx-  
ed with a lytle Turpentine: then in this dyppe  
wooll, and lay it on the place.

But yf so be that this swellyng come of ouermuche crying, cough, or of a stroke or fall:  
Then take bytter Lupines, and the powder of fayre

faire olde linnen cloth burnt to powder, and temper these with red wine, and then in this dyp a peece of towe, and lay it to the Nauyll.

C Agayst vnsleepynesse.

A Gainst vnsleepynesse, that is, when the child is destitute and wanteth his due and naturall rest, all the whyle crying and weepynge. For this take two heades (with the seedes therin contained) of whyte Popie, and with one sponefull of Rose water, and three or fourre droppes of Vineger, stampe them in a morter reasonably, then adde thereto two sponefulles of womans mylke, and the waight of an halspeny of Saffron, with halfe a sponefull of Barlie flowre, the whiche yet stampe a little together agayne, and then laye it in a fine thinne double linnen cloth, and applie it to the forehead from one temple to the other.

Item, geue the chylde to drynke a little of the syrope of Popie. Also to annoynt the temples with the oyle of Popie is very good.

But yf this vnsleepynesse come of the impurite of the Nurses mylke (as manye tymes it doth) then take of the oyle of violettes, and put vnto it a little quantitie of vineger, and of this licour droppe oftentymes into the chyldes nose-thilles. Or els take the oyle of Roses, and temper it with the iuyce of Letuse, and therwith annoynt the head and the stomacke of the chylde, and farther, see that the Nurses mylke may be amended.

# The thirde booke.

## C Agaynst verryng or the hycrate.

**H**is verryng commeth eyther of coldnesse of the stomacke, other els of ouermuche fulnesse, or for lacke of meate and emptines of the stomache, or els by some hotte and colerike qualitie bytyng vpon the mouth of the stomache.

As often as it commeth by the aboundinge of meate and fulnesse, the remedie is to provoke it to vomite. If by coldenes of the stomacke, then annoynct the stomacke with the oyle of Bayes warmed, other els lay to the stomacke a plaster made of the seede of Dyll, beaten and tempered with the iuyce of Wyntes.

But ys it chaunce by any heate or coleryke qualitie, then take the oyle of Violettes, or of Roses, the iuyce of Endive, or of any other suche hearbes the whiche haue power to infrigidate and coole, and temper the same with womans mylke, and annoynct therewith the chylde's stomacke.

And when it proceedeth by defecte and lacke of meate or emptynesse of the stomacke, then geue to the chylde to feede vpon mylke, and other good holsome thynges to suppe, neyther passe not greatly though the chylde reiecte and vomite vp agayne that the whiche it receaueth, for so muche euer wyll remayne in the stomacke that shalbe sufficient to sustayne it, and meanely to nouryshe it.

The third booke. Fol. Criss.

Agaynst osten parbreakynge by weakenesse and  
seeblenesse of the stomacke.

**A**gaint ouermuch parbreaking, beat  
four graynes of Cloues, and geue it  
to the chylde to drynke with four or  
fyue spoonefulls of red wine.

Item, take of Mastiche, whyte  
frankencense, and the leaues of the red Rose  
so muche as shalbe sufficient, and all these beaten  
together, temper them with the iuyce of Myntes,  
and make a plaster of it, laying it to the  
chyldes stomacke. But yf the chyldes vomityng  
be very behement, then put vnto these foresayde  
thynges a quantitie of Rose vineger.

Item, take fine meale, and bake it so hot in  
an ouen, or els in a frying panne ouer the fyre  
tyll it ware browne, then beate it to powder a-  
gayne, putting it into vineger, and to these ad  
the yolke of an egge hard rosted, Mastiche, fran-  
kencense, and Gumme Arabiche, and temper all  
these with the iuyce of Myntes, makyng of it a  
plaster, the whiche laye to the chyldes stomacke,  
and to the childe mouth and nose hold a warme  
toste of breade.

Causes of this yll be three. The syrff, yf the  
chylde haue taken more mylke then it is able to  
concocte and digest. The seconde, yf the Nur-  
ses mylke be ouerthinne, wateryshe, and flushe.  
The thyrde, yf the same mylke be impure, se-  
culent, and corrupte. These causes prouoke bo-  
mite, and speciallye yf the chylde also haue a  
weaknesse.

R. iiiij. weaknesse

# The thyde booke.

Weake and waterishe stomacke: wherfore ye m ust  
helpe the Infant after this maner.

First let the childe sucke lesse then it did before,  
and then also marke that which the childe doeth  
perbrake, whether it sauuer sharpe lyke vaine-  
ger, or that it be whytyshe. For ys it be so: then  
take of whyte frankensence. viii. graynes, of  
dryed Rue. xx. graynes: beate these to powder,  
and geue it to the childe to drinke, with the syrope  
of red Rose.

Oz els let the Nurse chawe Cummin, and so  
put it into the chyldes mouth: Geue also of the  
syrope of Pomegranates, with the powder of dry  
Wyntes to the chylde.

Take Masticke, Accatia, Xiloaloes, Galles,  
whyte frankensence, tosted bread, of eche lyke  
much, beate them together, puttynge to of red  
Roses, and temperyng it with the conserue of  
Roses, and lay it to the chyldes stomacke.

But if it so be that the perbrakyng of the childe  
sauuer not after the fashyon of vainer, but after  
some other swere sauour, and that it be not whyt-  
yshe, but pale or yelowythe: then geue it the iuyce  
of Quinces, and lay this plaster vnto the chyldes  
stomacke. Take Barlye meale, wyld Mulberies,  
and Psidium, beate all these together, and tem-  
per it with Rose water, and lay it to the chyldes  
stomacke.

And furthermore, ys the chyldes stomacke he  
somewhat waterishe, and slowe in digestion,  
then annoynt it with the water of Roses, in  
the which Muske hath ben dissolved, oz els the  
water

The thirde booke. Fol. cxvii.

Water of Mirtilles, and geue it to drynke the  
juice of Quinces, with a little Cloues and Su-  
ger, or with a scruple of Nutmegges therewith  
tempered and mixed.

C Agaynst fearefull and terrible dreames.

A Lso sometyme the chyldren be vexed and  
vnuquieted with fearefull and terrible drea-  
mes in their sleepe, which thyng for the  
most part commeth of the aboundinge of foode,  
and ouermuch meat or drynkes, which for the  
copie and superfluitie therof, can not be conuict  
ne ouercome of nature, wherfore necessaryly it  
putrifieth and corrupteth: the noysome hidvous  
vapours wherof, stying vp to the head in tyme of  
sleepe, causeth these terrible fantasies in the  
sleepe. And thus may it be remedayed. First take  
heede that ye lay not the chylde to sleepe strayght  
after it hath fed, and also let it liche a little honyn,  
swallowynge it downe, so that by it, such thinges  
the which be somewhat harde to digest and con-  
coct, may the sooner be digested, and the refuse  
the more easly to descende into the guttes.

Item, every day geue to the Infant halse a dram  
of the electuarie called Diamuscum, or Diaplicis.  
Also Triacle in this case is very good, taken with  
mylke, as saith Rasis.

C Agaynst issuyng soorth of the fundament gut.

F OR the issuyng soorth of this gut, when  
the chylde laboureth to ease it selfe: Take  
Mirtilles, Acorne cuppes, red Roses dryed,  
burnt

# The thyde booke.

burnt Hertes hornes, burnte Alome, Goates  
hoose, Balauistium, and Galles, of eche lyke much,  
and seethe all these together with water, so long  
tyll the water haue receaved the strengthe of the  
ingredience, and with this water beyng warme,  
washe the gut, and so conuey it into the bodye a-  
gayne, as I taught you in the seconde booke.

## Agaynst Tenasmus.

Enasmus is a disease when the  
child enforceth it self to the stoole,  
and yet can do nothyng, the whi-  
ch thyng oftentimes chaunceth  
to children, moste commonly pro-  
ceedyng of colde. Agaynste the  
which, ye shall vse these remedies. Take Garden  
Cresses and Cummin seede, of eche lyke muche,  
beate them together and temper them with olde  
butter, and geue it to drynke to the chylde with  
colde water.

Item, take Turpentine, and laye it vppon  
coales, whose fume let the chylde receave be-  
neath in the fundement, the fume beyng inclo-  
sed rounde about with clothes.

Item, take Tarre, and lykewyse make fume  
of it, receauyng the fume as before.

Agaynst woormes in the belly.

Sometymes there breede woormes in the  
guttes, of the bygnesse and quantitie of  
suche as are wonte to be in olde Cheese,  
called Mytes, and some lyke lyce. And sometyme  
in the belly be engendred woormes of the byg-  
nesse

The thirde booke. Fol. Exb.

nesse of earth woomes, called Eases. Agaynst  
these use this remedy, Take the water of Centum  
nodia, and geue it to the chylde to dynke with  
mylke.

Item, take of whyte Corall, the scraping of  
Juery, of Hartes horne burnte, and of Treos, of  
eche a scruple, of Suger candie one ounce and  
an halse, of the water of Centunmodia, so muche  
as shalbe sufficient to temper all these thynges  
before, and of this make suppositaries, mini-  
stryng to the chylde every day the wayght of two  
drammes.

Otherwyse accordyng to Rasis mynde: Take  
of Cummin seede as muche as shalbe sufficient,  
and temper it with Dre gall, makyng thereof a  
plaster, the whiche ye shall lay to the Infantes  
Nayll.

Item, oyle Olie taken and drunken a small  
quantitie thereof, is very good to kyll all maner  
of woormes whiche breedeth in the gutte, neere to  
the fundement: Take the synest cotten, & thereof  
make suppositaries, the which ye shall annoynct  
with the oyle of Wormewood, or of Rue, or of  
the kynnelles of Peaches, or the oyle of bytter  
Almondes, and so to conuey it into the chyldes  
lytting place.

Item, it shall greatly profite the chylde, ys it  
be washed in the water in whiche is sodden  
Wormewood, and the leaues of Peaches.

Item, an oyntmente for the same. Take of  
Wormewood & of Lupines, of eche two dramis, of  
Siler

The thirde booke.

Siler montanum, Cummin, Cockle, Centorie, and Centonicum, and of Hartes horne burnt, of eche fourre drammes, all these thynges beaten togher, temper them in the oyle of Wormewood, or of bytter Almons the wayght of two ounces, puttyng to it fourre drammes wayght of ware, and make hereof an oyntment, and annoyn the chyldes belly therewith by the fire, or in some warme place.

Item, take of Cockle two drammes, of wormwood and Masticke of eche one dram, of Aloes, red Corall, of eche two drammes, of Coriander preparat, sixe drammes, beate all these well togher. Adde also to these, of Rye meale three ounces, of Lupines beaten to powder, sixe drammes, of Saffron two drammes, temper al these in two ounces of the iuyce of Rue, and fourre ounces of the iuyce of Wormewood, or of the oyle of the same, and make hereof a plaster, and lay it vnto the chyldes Nauyll the breadth of a hande.

Item, geue the chylde the wayght of fourre pence of the powder of Aloes cicotrine, with fayre water fyfte sodden and sweeted with Suger, or els with singe beare, and this no doubt is soueraigne.

Item, agaynst the great and long wormes. Take of the iuice of Wormewood, and of Ore gal, of both two ounces, of Colocinthis. viii. drammes, temper all these well together, addyng to it a lyttle wheaten meale, and make hereof a plaster, the whiche laye to the Nauyll of the chylde.

Item,

# The thyde booke. Fol. Crbt.

Item a bathe for the same.

Take Wormewood, and Gaules, and seethe them in water, and let the chylde be bathed in it vp to the Nauyll.

Of chausyng or gallyng in any place  
of the body.

**A** Gaynst gallyng or chausyng of the chyldes skynne, by reason of the acrimonie & sharpenes of vrine or sweate: Take Mirtils and beate them to powder, and strewe thereof on the place. Item, take of Irios, of the red Rose, of Ciprus, of Tragacanthum, so much as shalbe thought sufficient, and beate them all, or part of them, and strewe of the powder on the chaufed places.

Item, take of the oyle of Roses one ounce, of whyte frankencense one dramme, and melt these together, and then take eyght graynes of Camphire dissolved in Rose water, and myxt therwithall, and of all this make an oyntment, and annoynct the chaufed place therewithall.

Also Vnguentum album, and Vnguentum rubeum be good for this purpose.

Item, the decoction and fomentation with the water wherein Plantane, knot grasse, docke rootes, or Bursa pastoris is sodden, is very good for the same.

Of the sallyng sicknesse.

**S** Ometymes these Infantes be vexed and encumbred with the sallyng sycknesse, and that two maner of wayes. One is, that it

## The thyde booke.

It hath this disease straignt soorth with the byrth: Cause of the whiche, is colde and yll humours in the head and braynes. Another is, that it taketh this infirmitie after the byrth by some accidentall causes, in whiche case, ys it leauue not the childe, being a manchylde, before he be. xxv. yeres of age, and the woman chylde about the tyme of hauyng her fyfte flowres: ys it forsake them not in this space, neyther by the myght of nature, neyther of medicines, then is it lyke never to depart from them.

Agayne, ys this disease come not by nature, but by some accidentall cause afterwarde, then geue diligent heed that the Nursles mylke be very good, and conuenient to the chyldes nature. And for the same purpose ys necessarie require, it shalbe verye good to purge and cleanse the Nursles bodye with due and meete medicines, and she must auoyde allsuche thynges the which do coole and moysten, and to suffer the chylde to receaue no more mylke at once, then it may be able well to digest.

Agaynst this cruell disease, auchours muche commende the roote of a Pionie, only hanged about the chyldes necke.

Item, the same roote dried and beaten to powder, and so oftentimes geuen to the chyld to take, sometymes with drynke, sometymes with portage, pap, or mylke, or any other wayes. Lyke-wyse the seede of Pionie is very good.

Farthermore, powre nowe and then into the chyldes nosethrils of oyle of Castorium, or the oyle of

The thyrde booke. Fol. Crbis.

of Costus, or of Euforbiu[m]: Also let the chylde  
smell to Rue and to Asa fetida.

Item, to hang Viscum quersimum, which is ga-  
thered in Marche the moone decreasyng, about  
the chylde's necke, is verye good. Divers other  
thynges there be whiche myght be here rehear-  
sed, but this shalbe sufficient at this tyme.

C Consumption or pnyng away of the body.

**V**hen the Infant falleth away, and  
the fleshe rebateth, remaynyng no-  
thing but as it were skyn and bone,  
and thereby the chylde wareth syck-  
lye: Then let the Infante be often  
bathed in water, in whiche hath ben sodden the  
head and the feete of a weathir, so long tyll the  
fleshe part from the bones of his owne accord,  
and euery tyme that the chylde commeth foorth  
of the bath, fyrt let it be wyped and dryed cleane,  
and then amoynte it with this oyntmente.  
Take freshe Butter, oyle of violettes, and oyle  
of Roseys, of ech one ounce, of the fatte of freshe  
Porke halse an ounce, of white ware two dram-  
mes, melt all these thynges together, and make  
an oyntement of it, amoyntyng therewith the  
chylde body.

Item, take white ware, Swines grease, sheepes  
tallowe, freshe Butter, melte all these thynges  
together, and strayne them, makynge of it an  
oyntment, and amoynte the chylde withall  
once or twyse euerye daye. But the cheese hope  
of

The thirde booke.  
of restauration muste be in light, restoratyre, and  
pure nourishing meates.

C Of lassitude, weerynesse, or heauynesse  
of the chyldes body.

S Ometymes it chaunceth that the chyldes  
members of the body be so feeble, as though  
it had the paullie, so that with that partes  
of the bodye, the chylde can not helpe it selfe,  
neither can it lyft vp the handes, armes, ne stand  
on the feete. If the chylde haue this disease whi-  
leſt it sucketh, then let the Nourſe be comfor-  
ted, and strengthened with ſuche thynges the  
whiche haue vertue to heate and to drye. Also let  
the Nourſe feede only vpon roſted and fryed mea-  
tes, and that ſhe forbeare from mylkie, fyſhe,  
and harde or ſalt powdred fleſhe, for commonlye  
this disease ſpryngeth of colde and moyle hū-  
mours, besieging the ſinewes.

Farthermore, let not the Nourſe vſe any wa-  
tered wine, or mixed, but mere and in his owne  
kynde, and let her bathe the chylde euer before  
ſhe geue it ſucke, after amoyntyng it with the  
oyle of Caſtorium, or the oyle of Coſtum, and let  
the chylde drynke every day a quantitie of this e-  
lectuarie folowing.

Takie Garden Mint, Cinamome, Cummin, drye  
Roses, Maſtick, Fenugreke, Valeriane, Amios,  
Doronicum, Zedoarium, Cloues, Saunders, Xi-  
loadoes, of ech a dram, of Muſke halfe a dramme,  
beate all thoſe to powder, and conſift them with  
clarified and depured honye, make thereof an  
electuarie,

# The thirde booke. Fol. Crbiss.

electuarie, of the whiche every day geue vnto the chylde the weyght of two pence to dynke with whyte wine. If the chylde haue this disease in every part of his bodye, then take an ounce of ware, and a dram of Euforbium, the which Euforbium ye shall beate in a morter with .v. or .vi. droppes of oyle, tyll it be perfectly beaten, then temper them together ouer the fyre, adding ther unto so much oyle as may be sufficient to make a searecloth, and lay it to the raynes of the backe.

## C Of tremblyng of the body, or of certayne members of the body, called the Palsey.

If the chylde happen to be vexed with tremblyng or shaking of the body, or the partes thereof, so that ye feare the palsy of the same parte, or that the falling sicknesse shoulde ensue: then remedie it after this meanes. Take the oyle of Roses, and the oyle of Spykenarde, and temper them together, warmyng it, and therewith annoynt the backe or raynes, and the other shaking members: ye may also take any other oyle the which hath vertue to warme and calefie, as the oyle of Bayes, and such other.

Item, to bathe the chylde in the decoction of Rosemarye, Sage, Tyme, Hyslope, Sauery, Alerander, Smallage. &c. is very loueraigne. If you can not cure it by this meanes, then de maunde farther counsayle of the phisitions.

S i Agaynt

The thirde booke.  
Agaynst the strangury or stome, with stopping  
of the bryne.

Strangury, Dissury, and the difficultie in  
makynge of water, oftentymes chaunceth  
to children by reason of the stome, or abou-  
daunce of grauell, other els many tymes of some  
other viscous, slimye, and flegmatike matter, in  
maner and fourme of dreggs or ragges ouerwhar-  
ting and crossing the passage, whereby the brine  
shoulde passe soorth, in such wyse, that (without  
great Payne) the chylde can not make his water,  
and that yet but in small quantitie at once.

Whiche of these wayes so euer it come, it shal-  
be verye good to bathe the chylde vp to the Pa-  
uyll in the decoction of Paritorie of the wall,  
Mallowes, Holyoke, Lynseede, Lillie rootes,  
Fenegreke, and Sauery, other els with a spunge  
or double linnen cloth dypped therein, eftstones  
to foment the share and neather part of the belly  
agaynst the bladder.

But in men chyldren cheefely foment them  
on the straightes, betweene the fundement and  
the coddes, the whiche place in Latine is called  
Perineum, for there in them lyeth the necke of the  
bladder. After this bathyng or fomentation,  
drye the places fomented, and whilst they be yet  
redde with bathing, annoynt them with the oyle  
of scorpions, to be hadde at the Apothecaries, or  
els the oyle called Petroleum.

And ys farther neede shall require it, ye may  
applie

applie this plaster folowyng to the foresayde places. Take of Parsley, and of Alexander, of eche halfe an handefull, of Paritorie, Mallowes, Holynoke rootes, of eche an handfull, seethe these hearbes together in good stale ale, tyll such tyme as they be lost, then powre out the ale from them, and stampethe hearbes in a stone morter, adding therewnto of the seedes of Senegreke and Line, of eche halfe an ounce, beyng fyrt beaten to subtill powder.

Item of Cummin seede the wayght of four grotes, beaten lykewyse to fine powder, of the oyle of Scorpions, Petroleum, or other appertifis oyle one ounce and an halfe, of all these well commynred together, make a plaster, and lay to the places aforesayde. To speake of any medicines to be administred inwardes, it is but folly, for so muche as it is so harde to cause a chylde to take any thing within foorth.

This difficultie in makynge water, maye ensue by other meanes, whereof we neede not to speake at this tyme.

Of goggle eyes, or looking a squint.

If the chylde haue goggle eyes, or that it looke a squynt, then fyrt sette the cradell in suche a place, that the lyght maye come directly and ryght in the chyldes face, neyther in the one syde, neyther in the other, neither aboue the head, lest it turne the syght after the lyght. Also marke on whiche side that the eyes do goggle, and let the lyghte come vnto it on the

## The thirde booke.

contrary syde , so to returne the syght . And in  
the nyght season sette a candell on the contrary  
syde , so that by this meanes, the goglyng of the  
eyes may be returned to the ryght place . And  
further it shalbe good to hang clothes of divers  
and freshe colours on the contrary syde , and spe-  
cially of the colour of light greene , or yelowe,  
for the chylde shall haue pleasure to behold these  
straunge colours . And in returningy the eye  
sight to warde suche thynges, it shalbe occasion to  
rectifie the syght agayne . And this shalbe suffici-  
ent for this tyme , of the diseases of chyldren after  
they be borne, makyng here an ende of this third  
booke for this tyme.

The fourth booke. Fol. Cxx.  
Of such thinges the which shalbe en-  
treated of in this fourth booke.

Cap. i.

**E**re in this fourth booke  
(by the leaue of God) shall  
briefly be declared such  
thynges whiche may far-  
ther or hynder the concep-  
tion of man, whiche as it may be by  
dyuers meanes letted and hyndered, so  
also by many other wayes, it maye be  
farthered and amended. Also to knowe  
by certayne signes and tokens, whe-  
ther the woman be conceaued or no,  
and whether the conception be male or  
female, and finally certayne remedies  
and medicines to farther and helpe  
conception, and thereaftre we Wyll (ac-  
cordyng to our promyse in the Pro-  
logue) set foorth certayne bellifying re-  
ceptes, and so make an ende of this  
whole treatise.

S iii      Of

## The fourth booke.

### Of conception, and how many wayes it may be hindred or letted. Cap. ii.

**H**ere is nothing vnder heauen whiche so manifast and playnely doeth declare and shewe the magnificent mightinesse of the omnipotent lyuing God , as doth the perpetuall and continuall generation and conception of lyving thinges here in earth , by the whiche is sauued , proroged , and augmented the kynde of all thinges . And where that this almyghtie Lorde and creature hath so institute and ordained , that no singuler thing in it selfe (here vpon the earth) shoulde continually remayne and abide : yet hath he geuen from the beginning and instinct such a power and vertue vnto these mortal creatures , that they may engender and produce other lyke thinges vnto them selfe , and vnto their owne similitude , in the which alway is sauued the seede of posteritie . Were not this prouision had by almyghtie God , the nature and kynde of all maner of thinges woulde soone perishe and come to an ende , the which vertue and power of generation many times doth halte and misse , by defect and the contrary disposition in the partes generant :

As ye maye evidently see in the sowyng of corne and all other maner of seede , so that there be in all maner of generation three principall partes concurrent to the same , the lower , the seede sownen , and the receptacle or place receauyng

The fourth booke. Fol. Crri.

uyng and contaynyng the seede. If there be faulte in anye of these three, then shall there never be due generation, vnto suche tyme as the faulte be remoued, or amended.

The earth vnto all seedes, is as a Mother and Nurse, contayning, clipping and embrasing them in her wombe, feeding and fosteryng them as the Mother doth the chylde in her bellye or Matrix, vntyll suche tyme as they come vnto the growth, quantitie, and perfection due vnto their nature and kinde: But yf this seede conceaued in the bowels of the earth, do not proue or fructifie, then be thou sure that eyther there is let in the sower, in the seede, or els in the earth.

The earth may be ouer wateryshe, dankishe, or ouer hoate and drye, or els full of stones, grauel, or other rubbishe, or ful of yll weedes, which may strangle and choke the good corne in his growyng: also the seede may be putrified, or otherwise biciate and corrupted, and so the lyfe and spirite of it vanished awaie and destroyed. The sower maye vnoordinately strewe and caste the seede on the earth. ac. So that yf there be let in none of these partes concurrent to generation, or that the letters be remoued and done awaye, then doubtlesse wyll ensue multiplicacion and encreasement of that kynde of the whiche the seede commeth, accordyng to the naturall inclination, the whiche almyghtie God hath emplanted and sette in the kynde of all thynges.

## The fourth booke.

Howe many wayes conception may be letted,  
and howe the causes may be knownen.

Capit.iii.

Every thing then, the which doth encrease in  
this kind, must fyrt be conceaued in þ womb  
and Matrix of the Mother, whiche is apte  
and conuenient for the receate of such seede. And  
as I sayd before, as there may be defect and lache  
in the Mother receauing the seede, so may there  
be fault and defect in the sower, and in the seede  
it selfe also.

And in women there may be foure generall  
causes, by the whiche the conception may be  
impedite and let: ouer muche caliditie or heate  
of the Matrix, ouermuch coldnes, ouermuche  
humiditie or moystnes, and ouermuch drynes.  
Any of these foure qualities excedyng tempe-  
rancie, may be sufficient causes to let due con-  
ception.

Wherfore the ryght excellent Phisition Hipocrates in the v. booke of his Amphorismes saith:  
All suche women the whiche haue colde and  
dense Matrices, can not conceaue, and suche as  
haue moyste and wateryshe Matrices can con-  
ceau, for the power of the seede is extinguisched  
in it. Allo hauing drye Matrices, conceaue not,  
for the seede perisheth for lacke of due nutriment  
and foode: but that Matrix the which hath all  
these qualities in temperauncie, that is fruite-  
full. This is Hipocrates saying, the which thyng  
also

## The fourth booke. Fol. Cxii.

also may be well perceaued by a familiar example of the sowyng of corne.

For yf it be sownen in ouer colde places, suche as be in the partes of a countrey called Si-thia, and in certayne places of Almayne, or in suche places where a continuall snowe or froste, or where the Sunne doth not shyne, in these places the seede or grayne sownen, wyll never come to proofe, nor fructifie, but through the vehement coldnesse of the place, in the whiche it is conceaued, the lyfe and quicknesse of the grayne is vterlye destroyed and adnihi-late.

And farther as concerningyng ouer muche humidite, yf ye sowe your grayne in a fen or marshy and watery grounde, the seede wyll perishe through the ouermuche aboundaunce of water, whiche extinguisheth the liuelynesse and the naturall power of the grayne and seede.

Lykewyse yf it be sownen in such a countrey or place where is ouer great heate, not tempered with water and rayne, or yf the yere be so drye, that there came no rayne at all to alaye the extreme and feruent heate of the Sunne: then shall the seede sownen, wyther and drye awaye, and the power of it be consumed and burnt.

Also yf it be sownen in drye places, where never commeth rayne, or on the lande, and grauely places, in suche a place the grayne can never take, ne proue, ne be conceaued in it, to come to any fruite or profit.

Wherfore yf the Matrix be distempered, by  
the

## The fourth booke.

the excesse of any of these fourre qualitieſ , then  
muſt ye reduce it againe to temperaunce, by ſuch  
remedies as I ſhall ſhewe you hereafter . Like-  
wife may there be defect and lacke in the man: as  
yf the ſeede be ouer hotte, the whiche the woman  
ſhall feele as it were burnyng hot, or to colde, the  
whiche ſhe ſhall feele as it were in maner colde as  
yle, or to fluye or thinne . ac. Diuers other wayes  
alſo it may be letted , whiche ſhall not neede here  
to be rehearſed.

Nowe yf the woman can not conceauē , the  
cauſe comming of ouermuch frigidite or colde-  
neſſe in the Matrix, that ſhall ſhe knowe by theſe  
tokens . She ſhall feele great colde about the  
ſides, the raynes of the backe , and the Matrix,  
her brine ſhall appeare whyte and thinnishe, and  
ſometimes alſo ſomewhat ſpiffe and thicke , and  
all maner of colde thinges ſhall noy her , hotte  
thinges ſhall greatly comfort her.

But yf it come by ouermuche humidite of the  
Matrix , that ſhall ſhe knowe by theſe ſignes . If  
the bodye of her be of a fat & groſſe diſpoſition, yf  
with her flowres iſſue foorth at the begynnyng  
and the latter ende of them certayne viſcous and  
watery ſubſtaunce, and that her hryne be white,  
thicke, and ſometyme as it were mylke . Alſo that  
ſhe feele great colde and paine about the Matrix  
and priuie partes, and much dolour in her ſides,  
and in the raynes of her backe .

And when ouermuch heate or dryth in the  
Matrix is cauſe of the hynderaunce of concepti-  
on, then is the brine hye coloured , redde, or ye-  
lowe,

lowe, beyng thinne, with certayne moates appearing in the water: the weman hath greate thyrt, and byter rysing or belchynge out of the stomacke into the mouth. And many tymes they that are in this case, are very spare and leane in all their bodye, having also but small quantitie of flowres, the whiche thyng maye happen eyther by ouer muche watche, or ouer-much fastynge, labour, trauaile, sorowe, sickenesse, &c. But suche women whiche naturally are thus spare and leane, may very hardlye be brought to a temperancie agayne, and be made apt to conceaue. And this shalbe sufficient for this tyme, to knowe whiche qualitie by his excesse causeth sterilitie. Nowe wyll we shew how it shalbe knownen, whether lacke of conception be in the woman, or els in the man, and how to knowe whether the woman be conceaued or no, accordyng to the mynde of ryght expert Phisitions.

Howe to knowe whether lacke of conception be of the woman or of the man, and  
howe it may be perceaued whether she  
be conceaued or no. Cap. iii.

If ye be desirous to know whether the man or the weman be hinderaunce in conception: Let eche of them take of wheate

## The fourth booke.

wheate and Barlye cornes, and of Beanes of eche .vii. the which they shall suffer to be steeped in their severall bryne the space of twentie and fourre houres: then take two pottes, such as they set Gelislowres in, fill them with good earth, and in the one let be sette the wheate, Barlye, and Beanes, steeped in the mans water, and in the other the wheate, Barlye, and Beanes steeped in the womans water, and every mornynge the space of .viii. or .x. dayes, let eche of them with their proper bryne water the saide seedes sowne in the foresayde pottes: and marke whose potte doth proue, and the seedes therein contayned doth growe, in that partie is not the lacke of conception: and see that there come no other water or rayne on the pottes: but trust not much this farre fet experiment.

Item, accordyng to Hipocrates wryting, yf ye wyll know whether the faulte be in the woman or no, then let the woman receaue into her body vnderneath, beyng well and closely closed round about, the sume of some odoriferous perfume, as Laudanum, Storax calamite, Lignum Aloes, Muske, Ambre, and such other: and yf the odour and sauour of suche thinges ascende thorowe her body vp vnto her nose, ye shall vnderstande that sterilitie commeth not of the womans parte: yf not, then is the defect in her.

Item, yf she take Garlicke beyng pilled out of the huskes, and conuayre of it into the priuie partes, and yf the sent of it ascende vppre thorowe the bodye vnto the nose, the woman is faullesse,

sautlesse: yf not, then is there lacke in her. These tokens, although they haue a certayne reason and appearaunce, yet be they not alwayes vnfallible, but only likely.

Whether she be conceaued alredy or no, ye shal knowe by these signes. First the flowres issue not in so great quantitie as they are wont, but ware lesse and lesse, and in maner nothyng at all commeth from them. Also the brestes begin to ware rounder, harder, and styrfer then they were wont to be: the woman shall long after certayne thynges, otherwyse then she was vsed to do before that tyme. Also her bryne wareth spysse and thyckyshe by retention of the superfluities. Also the woman feeleth her Matrix very fastly and closely shutte, insomuche that as Hipocrates sayth, the poynt of a needle may scase enter.

Item, to knowe whether she be conceaued or no, accordyng to Hipocrates mynde, in the .v. of his Ampho. Geue vnto the woman when she is goyng to bedde, a quantitie of Mellicratum to dynke, and yf after that dynke she feele great payne, gnawyng, and tumbling in her bellye, then be ye sure that she is conceaued. This Mellicratum is a drinke, made of one part wine, another part water, sodden together, with a quan-

titie of honys. But yf ye be desyrous to knowe whether the conception be man or woman, then let a droppe of her mylke or twayne be mysked on a smothe glasse, or a bryght knyfe, other els on the nayle of

To knowe  
whether the  
woman be  
conceaued,  
or no.

## The fourth booke.

of one of her syngers, and yf the mylke flewe and spreade abrode vpon it by and by, then is it a woman chylde: but yf the drop of Mylke continue and stande styll vpon that the which it is mylked on, then is it a signe of a man chylde.

Item if it be a male, then shal the woman with chylde be well colored, and lyght in goynge, her belly rounde, bigger towarde the right syde, then the left (for commonly the man chylde lyeth in the ryght side, the woman in the lefte side) and in the tyme of her bearing she shal better digest and lyke her meate, her stomacke nothyng so quesye ne feble.

Of certayne remedies and medicines whiche may farther the woman to con-  
ceave. Cap. b.

**A**L sterilitie then for the most part ensueth and commeth of the di-temperauncie of one of these fourre fornamed qualitie, wher-fore the remedie and cure of the same when it chaunceth, muste be done by such thinges the which haue contra-ry power & operation to the exceſſive qualitie, for by that shall it be reduced to his temperauncie a-gayne.

As yf that coldnesse and moistnesse exceeding temperauncie in the Matrix be occasion of steri-  
liti, then muste the applie suche thinges to that place the whiche be of nature hot and drye, the  
whiche may califie and warme the place, and al-  
so drye vp the yll moistnes and humours contey-  
ned

# The fourth booke. Fol. Cxxv.

ned in the same, hyndering conception.

And for because that the mooste generall and common cause of sterilitie doth proceede of colde, wateryshe, and flegmaticke humours, whiche bedewyng the inner sides and holonesse of the Matrix, with the porre and mouth thereof also, causeth that the seede sent from the man into the womans wombe or Matrix, can not there remayne ne cleave: neither is the mouth or port of the wombe apte or able to close it selfe sufficiently after the reception of the seede, the flewme and slime humours withstandyng it, the which vnlesse they be discussed, or dryed away, the seede alway slippeth and sideth soorth as faste as it entreth in.

Wherefore to remedie and to do away the foresayde impediment, ye shall vse the meanes whiche foloweth.

Syrste, within a day or two after the womans Termes be passed, let her by the aduyce of some Phisition take a purgation, whiche may purge flewme and wateryshenes, and then the next or the thirde day after, let her sit in a bath vp almoste to the Nauill, in the whiche bath ye shall decocte and seethe these hearbes folowyng. Take of Bay leaues, Mallowes, redde Myntes, Mirtilles, Camomell, Moioram, Marygoldes, of eche an handfull, of Sage three handfulls, of Mercurie and Brankuris of eche two handfulls, seethe all these hearbes together in faire water, or (ylt were for a noble woman) in halle water, and the other halle redde wine,

## The fourth booke.

wine, in this bath let her remayne the space of a good halfe houre , and a litle before that she come foorth of the bath, geue her to drinke of this electuarie folowyng.

Take of Spyke, Nutmegges, Cloues, Galingall, Cinamome, and long pepper, of eche the wayght of a grote , of Annise seede the wayght of two grotes, of Sage leaues dryed the wayght of thre grotes , all these thynges (eche by them selues) beaten to small powder, temper them altogether in so much pure claryfi ed Honey as maye be sufficient to receaue all the powder, other els commixt with this powder so muche fine Suger as the wayght of the powder amounteth vnto, whereof ye shall geue vnto her at once the wayght of two grotes, with .viii. ix. or .x. sponefulls of good whyte or claret wine , other els with god wisesey or Muscadell.

And all this must be done eyther fastynge in the mornyng one houre before breakefast or dyner , other els .v. or .vi. houres after dyner, so that it be not done vpon a full stomacke . But yf ye take the bath and the electuarium in the mornyng , then at nyght thre or fourre houres after supper , let her receaue vnderneath her clothes , the vapour of these thinges folowyng into the priuie . Take of Lauender dryed, of vnsent Tyme , Bay berries, Iuie leaues, of eche halfe a litle handfull, of whyte frankencense the wayght of fourre grotes , of Sage dryed, or other two litle handfulls of Rosemarye leaues

The fourth booke. Fol. Cxxvi.

leaues one handfull, seethe these together in sayre water, and when they be perfectly sodden, then let the woman set her selfe ouer the vapour thereof, sitting groueling, other els set on a couer made for the nonce with a tunnell or cunduite, thorowe the which the vapour may be directed into the womans priuie passage, the neere thereby, that the vertue thereof may approche vnto the wombe or wombe port.

Ye may also in the same water dyppe wooll, or els fyne linnen cloutes, and so conuay it into the priuie passage, there to remayne the space of one or two houres. This bath, electuarye, and vapour, I counsell them that haue neede to vse them the space of three dayes continually, and then the thyrd nyght to compayne with her husbande, and by the grace of GOD she shalbe spedde. There be sometymes, that with the vse of the bath onlye, or the electuarye alone, eyther the vapour, without any farther remedye haue ben aptified to conception, but who that vseth it as is aboue mentioned, worketh the surer way.

These shalbe sufficient remedies for want of conception, proceedingyng of colde, moyste, and flegmatike humidities. Nowe ys it come by any distemperancie in heate and dryth: then let her be purged of coller, or other unkynd heate bred in the body, by thynges apt and meete for that purpose, and then afterwarde to vse bathes, electuaries, and vapours, of moderately coolyng thynges, as of Roseys, Violettes, Letuse, Purlayne,

The fourth booke.  
layne, Plantaine, and dyuers other.

But forasmuch that moste commonly the bryaptitude of conception (in women hauyng theyz health) spryngeth of the superfluitie of colde and moylt humours (whereof we haue alredye spaken) therefore all other impedimentes leste a part, ye shall holde ye content with this for this tyme. For yf I woulde make mention of all the occasions whereby conception may be let or impedit, then shoulde I here alleadge and bryng in all the diseases that may happen to a woman in that partes, with the remedies thereof, whiche were a long worke, and not proper for this volume.

In this vi. Chapter is entreated of diuers belistingynge receptes, as ye may hereafter reade.

**T**HIS embellishing or bellyfyng medecines whereof I entende to speake here, be not to be vnderstanden to be of that sort, whereby any Adstititious or outwarde forraigne beautie or set colours shoulde be acquired or gotten, the which farre set & damnable curiositie, I doubt not but that all honest and vertuous sadde men do vtterly abhorre and contemne: but here myne only meanyng is, to shewe howe to remoue certayne blemishes, and as it were weedes of the bodye, through the whiche many tymes the naturall beautie thereof is obscured and defaced. For as in a fayre Garden, be it never so beauti-

The fourthe booke. Fol. Crxvi.

beautifull, yet if it be not regarded and looked unto, the weedes entermynglyng them selues among the good hearbes, wyll defourme and emperyshe the good grace of them. For in the earth, be it never so well diligent and pyked, yet alwayes therein wyll remayne some sparkes and seedes of unlooked for weedes, the whiche euer when tyme or season serueth, nature thru-  
steth forth.

Lykewyse in the bodye of man, among the good and necessary humours, is some sparkie or qualitie of yll and not necessarye humours, with the whiche nature beyng offended and cloyed, expelleth and dryueth them soorth sometymes in-  
to one place, and sometymes into another, ac-  
cording to the aptitude or feblenesse in res-  
taunce of the place receauyng it, and the force or  
violencie of nature (therewith greeued) sendyng  
it, so that the superfluities founde in the upper  
part and face or superficie of the skynne, ensiueth  
by the superfluite and dominion of lyke mat-  
ter conteyned and commyred in the vaynes a-  
mong the blood, and is a great euidence and  
testimonie thereof. But here I wyll not speake  
of all kyndes of bther disease's spryngyng of this  
inwarde corrupted humours, but onlye of  
suche thynges as commonlye chaunce to men  
and women without any impreyshment of theyz  
health.

As for example, fyrlste I wyll brefely declare  
the fylthynesse of the head, called in latin Perrigo,

## The fourth booke.

In Englishe, the Dandriffe of the head, the which is, when that in kembynge and cratchyng of the head, certayne whyte scales, as it were branne, falleth of from the head, and lyeth very thicke among and vnder the heere.

### C Of the causes and remedies of Dandriffe of the head.

THE cause of this Dandriffe commeth by aboundaunce of fleumaticke humours, com-mixt with the blood, the which dayly and hourely by vncessible sweatynge, euaporateth and issueth soorth of the pores, in the skinne that couereth the panbone, and as fast as it is-sueth soorth, dryeth on the vther superficie of the skinne, and there remaynyng and gatheryng to-gether, becommeth euery day more and more, thereto greatly helpyng the foest of heere which couereth, harbereth and retayneth such super-fluities, more in those places then in any other where no heere groweth. And most commonlye they that haue blacke heere, haue more store of Dandriffe then other. This humour suffred ouerlong to raigne on the head, destroyeth and corrupteth the rootes of the heeres, makyng them to fall of in great plentie, and specially in kembynge. And although this superfluite be not cleanly, yet notwithstanding it shall be no wisedome for me to teache, ne any other here-with encombred, to learne howe to stoppe it, for feare of farther inconueniences, but onely I counsell you once in ten dayes at the least, to washe

The fourth booke. Fol. Cxxviii.

walshē and scōure the head cleane with good lye,  
wherin let be steeped in a lynnē bagge of Annis  
seede, Cummin, dryed Rosemarie, Fenugreke,  
and the ryndes of Pomegranate, of echē lyke  
much: and beware that after the washynge of  
your head ye take no colde, before the head be  
perfectly dryed.

And whereas some say, that they whiche use  
oste washyng of theyr heades, shalbe very prone  
to head ache: that is not true, but only insuche  
that after they haue ben washed, roll vp theyr  
hayre (beyng yet wette) about theyr heades, the  
colde whereof is daungerous to bryng them to  
Catarrhes and posse, with other inconueni-  
ences. Wherfore all diligence must be had, that  
the head may be exactly well dryed with warme  
clothes, whylest the head is yet hotte of the wa-  
shyne, and then never feare no inconuenien-  
ces, but rather conuenience and commoditie:  
and let this be done also fallyng in the mornyng,  
or els one houre before supper, or v. houres af-  
ter supper: this oste washynge shall purfye the  
skynne of the head, and stedfaste the hayre from  
falling, leuiate and lyghten the head, with all  
the sensē therein conteyned, and greatlye com-  
fort the braynes.

To take away hayre from places where  
it is unseemely.

I Tem, sometymes hayre groweth in places  
unseemely, and out of order: as in many may-  
dens and women the hayre groweth so lowe  
Tūt in

## The fourth booke.

in the foreheades and the temples, that it disfigureth them: for this ye maye vse three wayes to remoue them, eyther to plucke vp one after another with pincers, such as many women haue for the nonce, eyther els with this lye folowyng. Take newe burnt Lyme soure ounces, of Arisenecke an ounce, steepe both these in a pynt of wa-ter the space of two dayes, and then boyle it from a pynt to the halfe.

And to prooue whether it be perfect, dyppe a feather therein, and ys the plume of the feather depart of easlyly, then is it strong enough: with this water then annoynt so farre the place that ye woulde haue bare from hayre, as it lyketh you, and within a quarter of an houre plucke at the hayres, and they wyll folowe, and then walsh that place muche with water wherein branne hatch ben steeped: and that done, annoynt the place with the whyte of a newe layde egge and oyle Olieue, beaten and mixt together with the iuyce of Singrene or Purlane, to alaye the heate engendred of the foresayde lye. The thyrde way to remoue hayre, is with a plaster made of very drye pytche, and vpon leather ap-plied to the place, the hayres beyng syste shauen, or cutte as neare as can be with a payre of Cysers.

Nowe when the hayres be vp by the rootes, then to let them that they growe no more: take of Alome the wayght of a groate, and dissolve it in two spoonefulles of the iuyce of Nyghtshade, or of Henbane, and therewithall annoynte the place

The fourth booke. Fol. Cxxix.

place two or three tymes every day, the space of ix. or x. dayes, and hayre wyll growe no more in that place.

To do away frekens or other spottes in  
the face.

**T**hese frekens and such other spottes in the face or other where in the bodye, may be taken away by often annoyntyng them with the oyle of Tarter, to be founde alwayes at the Apothecaries, and surely that oyle is so ueraigne for that purpose.

Item, take Eleborus, and seeth of it an ounce in halfe a pynt of strong whyte vainege, till halfe be consumed, then mynte therewith Honey three spoonefulles, and the wayght of a penye of Mercury sublimid, (to be had at the Apothecaries) and seethe these together agayne till it become thicke: with this annoynt the frekens, and it wyll destroy them. This is also very good for the Morphewe, and other discoloration or staynyng of the shynne.

To destroy Wartes and suche lyke excrescences  
on the face or els where.

**F**OR this purpose nothyng is so excellent as euery day once, the space of three or four dayes, to droppe one droppe of strong wa-  
ter, called Aqua fortis, on them, for this destroy-  
eth them in very short tyme.

Item, the iuyce of a red Onion, and the iuyce of Marygoldes is very good for the same.

Item, dissolve a lytle Mercury sublimid in  
sayre

## The fourth booke.

sayne water, and therwith drop the Martes, and they wyll soone wither and consume away.

To cleare and clarifie the skyn in the handes,  
face, or other part of the body.

**F**OR this is nothyng better then to take one spoonfull of the oyle of Tarter, and syxe spoonfulles of water, with these commixed together, wash the handes, face, and other partes, for it scourseth, cleanseth, and purifys the skynne soueraignely, and wyll suffer no fylthynesse to remayne in the pores of the fleshe, and this oyle of Tarter is made on this wyse.

Take wine lyes dryed, the whiche the Golde-smythes do call Arguyl, and beate it into powder, and then syll thereof a Goldesmythes crudible, and set it among hoate coales, till the Arguyl begyn to ware blacke: then take it out of the fyre and let it coole, and bynde it in a linnen cloute, and hange it a lyttle ouer the vapour of hoate boylng water: that done, hange this cloute with the Arguyl in a glasse with a broade mouth, so that the bagge or cloute touche not the bottome of the glasse, and the water or oyle called Tarter wyll droppe downe a lyttle and lyttle: and the sooner, yf it stande in a very colde and moyste sellar.

Item, to scourre the handes and the body, some vse to washe theyr handes with the powder of Dresse, which is the roote of the blewe flouredelice, and some with Beane flowre.

Item, the yolke and whyte of egges is good for that purpose, and so is hony.

C To

**A**nnoynt the skyn with the oyle of sweete Almondes, the same is verye good also for chypynges of the lyppes or handes.

Item, Deere suet is very proper for the same purpose, especially beyng well washed and tempered with Rose water, wherein hath ben dissolved two or three graynes of pure Muske.

**C**Agaynst sodayne rysynges of pimplles, through brynde heate, in the face or els where.

**T**ake the whyte of an egge, and beate it well with a spoone, and then therwith commire two spoonefuls of Salet oyle, one spoonfull of Rose water, another of the iuyce of Sorrell, & halse a lyttle spoonfull of Vineger, here with annoynt the pimples and rysynges.

To kepe and preserue the teeth cleane.

**F**irst if they be very yelowe and filthy, or blac kyshe, let a Barber scour, rubbe, and pycke them cleane and whyte, then after to maynteyne them cleane, it shalbe verye good to rubbe them euerye day with the roote of a Mallowe, and to pyke them cleane that no meate remayne and putrise betweene the teeth.

Item, take of the small whyte pybble stones which be founde by the water sides, and beate the in very small powder, hereof take an ounce, and of Mastickie one dram, myngle them together

## The fourth booke.

ther, and with this powder once in. viiiii. dayes  
rub exactly your teeth, and this shall kepe your  
teeth sayre and whyte, but beware ye touche  
not, ne be re the gummis therewithall.

Item, to stable and stedfaste the teethe, and to  
kepe the gummis in good case, it shalbe verye  
good euery day in the mornyng, to washe well  
the mouth with red wine.

### Of stynkyng breath.

**S**TINCH of the breath commeth eyther by occa-  
sion bread in the mouth, or elz in the stomach.

If it come from the stomach, then the body  
must be purged by the farther aduyse of a Phisi-  
tion. If it be engendred in the mouth only, then  
moste commonly it commeth of some rotten and  
corrupted hollowe teeth, whiche in this case  
must be plucked out, and the gummis well scour-  
red and washed with vainege wherein hath ben  
sodden Cloues and Nutmegges. The cleanlye  
keeþyng of the teeth doth conferre muche to the  
sauerinesse of the mouth.

### Of the ranke sauour of the armeholes.

**T**HIS vice in many persons is verye tedious  
and lothsome: the remedie whereof is, to  
purge fyrtle the colericke and egre hu-  
mours, originall causers of the same, and after-  
warde to washe the armeholes oftentymes with  
the water wherein Wormwood hath ben sodden  
together with Camomell, and a lytle quantitie  
of Alome.

Item,

# The fourth booke. Fol. Cxxxi

Item Aucthors do wryte, that the rootes  
of Artichautes (the pyth pyked out) sodden in  
Whyte wine also drunke, doth cleuse the stenche  
of the armeholes and other partes of the bodye  
by the brine. For (as Galen also doth testifie)  
he prouoketh copie and plentie of stynkyng and  
vnsauerie brine from all partes of the bodye, the  
Whiche propertie it hath by speciall gyste, and  
not only by his hoate qualitie. And thus  
here I make an ende of this fourth  
and last booke.

FINIS.

Mr. W. H. Buckler's notes  
copied by H.M.F. Jan. 1925.

THOMAS RAYNOLDE  
Fellow of Merton 1520  
(G. C. Brodrick: Memorials of Merton, 1885, p. 251)

This man should not be confused with the Thomas Raynoldes (or Reynolds) who was Fellow of Merton 1526 - and Warden (Brodrick, op. cit. pp. 164, 254). The two men are distinct also in Boase's Register, where T. Raynoldes becomes B.A. on 4 Feb. 1518, and T. Raynoldes (~~one~~ Warden) on 23 Jan. 1522. (Boase, pp. 107, 123).

N.B. Dr. John Chamber (or Chambre), who preceded Raynoldes as Warden of Merton (Brodrick, pp. 163-4) was not only Physician to Henry VIII, but held several ecclesiastical offices (see D.N.B.).

Walter Buckler (or Bucler or Bucclour), Fellow of Merton 1522-(Brodrick, p. 253) was Secretary to Queen Katherine Parr from 1544 to 1547 and visited Paris in 1536, and Germany in 1545. As ~~her~~ colleague he of course knew Chambre and the others.

Venice in 1519

In J. Gairdner's Letters & Papers of Henry VIII, xii, pt. 2, no. 273 is a letter dated London 17 July 1537 from Tho. Raynolde to the wife of Ld. Lisle at Calais. (For Lisle see D.N.B. "Plantagenet, Arthur").

Raynolde thanks her for writing to Dr. Chambre in his favour. No man living does more for a poor man than the Dr. does for him. He has cost the Dr. since he came here 40 marks. Owing to his goodness is one of the Queen's chaplains and daily puts him to charges. Mentions his friend Mr. Bucler.

This reference shows that he is the "Reynolds" whom Buckler, in Gairdner, op. cit., xi, no. 63 (letter dated Paris, July 1536) mentions as having then been in Paris. The friendship with Buckler raises a strong presumption that the Reynolds or Raynolde of these letters was one of Buckler's colleagues at Merton, but not the Fellow who afterwards became Warden, since his other benefices (e.g. Canonry in Cardinal College, 1525-1530; C. Plummer, Elizabethan Oxford, p. 59) would have made him too prosperous to express himself as does the writer of that letter.

Three points suggest the possible identity of this Raynolde with the author of the preface of the "Byrth of Mankynd":

- (1) The friendship with Dr. Chambre;
- (2) The visit to Paris (cf. Ballantyne's essay, p. 306);
- (3) The chaplaincy to Queen Jane Seymour; since the preface refers to the teachings of the Bible in a way tending to indicate that the author was of the reforming
