Secondary Remedies

- 1 New seed
- 2 Good seed
- 3 Dry soil
- 4 Mixed Matted Manure
- 5 - Kalk
- 6 New soil
- 7 Dry storage
- 8 Manure
- 9 off Hopman
- 10 Seng all that means

Wales

Peat soil  
Change of seed -  
Early plan

I should not repeat the hope with as much ease  
The note set for the upper than could be the  
hand for me should that the soil be  
more of what the thing was changed  
with the locality was much else spent  
usually does (I write) the seed after  
take the soil for years by the water  
for just the plants in the stream; in the  
by the descent of the water - water on the  
the same of the same

In a potatoe having brown spots and excrecences  
On their surface but otherwise of sound  
~~the appearance~~ to center of album as  
usual & in ordinary quantity showing that  
the parts unaffected I rot be unaltered  
chemically

In a potatoe completely penetrated I rot, ~~the~~  
It and varies in color from dull grey to  
dark brown & having an offensive smell the  
appears no album was entirely decomposed

on the whole potato must be unwholesome unwholesome  
Even in the whole brown ~~the~~ excrecences  
The dark spots of an irregular shape  
as in a sound potatoe, and could have been  
separately expressed easily for they are  
but pieces for a sound potatoe,

---

When putting diseased potatoe in a  
sieve or in a tub the decayed parts can be removed  
for a cure in the shape of the potatoe. If  
a decay is arrested — the simple paper  
is not a satisfactory plan is not to preserve a  
superior crop in a stable suffering good for feed  
stock or if the diseased parts be carefully  
piled off never for human food, In a dry  
place the disease is not common, I can take  
to another
