

Windsor 10th August 1847

My dear Sir

I thank you for the letter and the very interesting specimen of *Folustroa* received by Mr Forbes — I will make you up a box of our Fossils and plants which will serve you for exchanges and send it to the care of any person in Halifax you may mention, as I may have a direct opportunity of sending a box of much weight from here direct — Mr Forbush I send you by the Rev^d C. De Wolf who has promised to take charge of them a few specimens of Gypsum to fill up — I cannot at present send you any better specimens of *Orthis* than the first of our sent and the best impression of another as I suppose — I found one on the face of a rock Mr Spring perhaps 8 inches long, a part was fully distinct with chambers & pyramide, the remainder was gone, but the impression on the stone was very similar to the last named specimen I have sent — I could not break it from the stone without in a great measure

destroying it. I have the remains of it &
two or 3 specimens more, perhaps better than
those sent but have unfortunately mislaid
them — I send you the only specimen I
have yet seen of *Cyrtoceras*, if it be that,
which I can do very well as I have the
impression perfect in the stone from which
it is taken. There seems to be no appearance
of siphons or chambers, but perhaps as
in the *Orthoceras*, they are not in the
terminating extremity — I have
sent a few specimens of a species of *Cypris*
inhabiting a neighbouring pond — and
some natural Copper from Cape S' or

You were so kind as to send me
a list of Natural Shells and many
specimens of them I have, ~~as follows~~
Arctia, & *Turritaria*, *Purpura lapidibus*
Littorina pallida & *Rudit*, *Natica* *sericea*
Palaemon *Helix alternata* & *Polyplocus*
Species *Patella*, *Stictis* *Magellanicus*,
Modiola *Purpurea* & *philatula*, *Astarte*
Cistana, *Venus* *meuscheni*, *Sanguinaria* *fusca*
Petricula *Photodiformis*, *Mya* *arenaria*
Sirodotis ^{*aurodonta*} Any of the others of which
you may happen to have abundant specimens

I should be pleased to procure
with kind regards to Mrs. Deane I remain
very truly yours
G. H. Harding

With regard to plaster, do you only want
the Selenite, or other specimens also, of
different colours and species?

Letter
