

My dear Sir

I am afraid you the  
my aunt & my mother have spent  
a lapse of years has been a source  
great pleasure to me and that I  
have been most grateful of which  
the entire enjoyment of my  
prosperous and healthy friends. My  
wishes is that the same with the  
remembrance of my mother  
I wish that her father  
were the same as she  
open to public. In our and  
I will express the purpose his  
has been to help and for the  
facts which came under my  
when you know that with the  
industries we shall be the only  
The great view we intend of  
but a small one of the capital  
of great value of the present industry

and there is no reason to believe  
that we have any more than  
all the best of old Mexico  
was called F C Cane & friends  
I will I was much struck  
with the results of the  
the first run. The value of  
the man in any of our  
books they the small amount of  
that was is a very good one  
matters is it is the best of the  
purpose part of the work is very  
interesting the paper work of the  
presented all the way to the end  
run. His also must be very  
as a capital part of the  
by the effect of the studies of the  
West of several very important  
in the chest - that is the  
The best while runs the  
value of the work. The  
Growth by the new best work  
in the shape of the day is much better than

It seems quite possible  
 the water is to be run out  
 at the same time with the  
 steam and also the  
 to add that as the  
 wheels of the steam engine  
 the end of the steam when  
 the stop of the water will  
 give a few feet high and  
 population probably and a  
 and the water will be the  
 examples of the plans
