

Proston 20 June 1869

Dr. Dawson

My dear Sir:

Yours of the 23rd with
the enclosed tracings has been
received.

I am so busy with my
new book, the nature of
which the enclosed circular
will inform you, that I am
unable to fire up all other
work that would be most a-
ppreciable to me. This is the
only course I can take. While
I am overwhelmed by listing
specimens which always require
immediate attention. I can
only say now that your three
specimens are all *Plattarise*,
two of them left upper wings

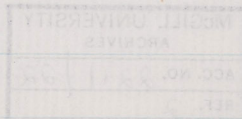

& the 3^d, the protostat shield;
The smaller wing is undoubtedly
new. As soon as I have
any leisure I will write again
about them, but it will be
quite impossible for me to
prepare an appendix to my
Zoological Society paper, much
as I should like to do so.

Hoping to have the
pleasure of seeing you at the
next meeting of the Assoc-
iation,

I remain

Very sincerely Yrs.

Sam. H. Scudder
