

Phila. 10/12/1890.

Dear Friend

Prof. J. M. Dawson

The notes re-
-questing return of
Pt. I of Foss. Reptilia
etc. was sent on the
supposition that you
had two copies at pres-
-ent. If so, the one
last recd. is correct,
the older one containing
a binding error & I
hope will be return-
-ed for correction &
reissue.

I note your ob-
-servation on Evolution,
and would say that if
the theory has nothing

The former & the latter and how many
? much interest yours article
on Paleogeographic Botany. They in-
-terest me very much and I
woud be rather highly any
reaso of yours on that or
other Geographical Logical sub-
-jects.

With kind regards
and etc

Yours, N. Boyle

to contend with more
difficult of solution
than the "origin of spe-
-cific types" as now
existing, its triumph
appears to me assured.

The origin of the primary
or first created "specific
types" is however another
-er matter, which the
heterogenists & biogen-
ists must settle.

My mind is so consti-
-tuted as to be unable
to resist the evidence
for evolution - up
to a certain point.
The question is, which
were & are the fir-
-est types, ^{or} which were
