

Saint John N.B.  
27 October 1870

My Dear Sir,

I write these few lines to notify you of the receipt of the little box of Insect remains from the Devonian of St. John, which I received through a private hand about a fortnight ago. Prof. Bailey and I are at work revising our geological report and introducing data gathered during

the past season.

I think I gave you a synopsis of ~~such~~ of of them as I thought you would take an interest in in a letter written some time since. I have just recovered from its burial of thirty years among the maps at the Mechanics' Institute Gosner's Geological, of New Brunswick, It gives his idea of the structure of Southern New Brunswick, obtained when he first there reports on

written - and is quite  
curious as being evidently  
the basis to ~~an~~ a consider-  
able extent, of the later one  
of D. Robt.

Hoping to hear  
from you when convenient  
I remain my truly yours

Wm Matthews.
