

Montreal Feb. 20. 1871-

My dear Sir

I found on Saturday a beautiful Pozoon structure in the limestone with spind which we looked at. and if you will kindly send your messenger with five shillings in a box for you. together with the books for which I return many thanks with a prof. opies.

I have no the time to examine the mineral which from Nesmell &c. which seem to be independent of the Pozoon fillings. With you kindly write me your impressions about the specimen. I perhaps return it when you have looked at it, as there is a large fine cleavable portion adherent to the side which I wish to examine more particularly. but cannot detach it without endangering the delicate structures now laid bare. Of course I can give you further specimens from Nesmell's work.

Faithfully Yours

Principal Dawson

I have not had time to examine the material which
 you have sent me. I am sorry that I cannot
 do so at present. I will give you my
 answer as soon as I can. I am very
 sorry for what I cannot say at present.
