

May 9. 1871

My Dear Sir

You will be glad to
learn that I have got out and
analyzed the green slate from
the Stangrove limestone and it
almost perfectly identical
with the mineral from the
Brunswick limestone. I have
yet to weigh the lime, but
as far as silica, alumina, mag-
nesia, sulphur & water go there
is scarcely any difference that

Sawyer's specimens that we may
look at them under the micros-
cope after Neachon's acids
as before.

Mr. Smith I am sorry to say
has been laid up for a whole
week.

I have just got from Dr. New-
berry a package holding a
copy of his fecal Report to
your address, which I
shall take an early oppor-
tunity to forward to you
when you are well.

in town I hope you will allow
to see some matters which I
have to show. Meanwhile to
remember my dear Sir

Very faithfully Yours

T. Story Hunt
