

Montreal.

22nd June 1871.

Dear Sir.

Your very able and valuable Report on the "Gardener" mine together with samples of Coal duly received - it is all I could desire Accept my best thanks for same as well as for the kind and prompt manner in which you furnished the Report.

We have two Square Miles of territory, between Eleven and twelve ^{Acres} Hundred of which we believe to be under land with Coal - and when the superior quality of the Coal as proven by your analysis is ~~considered~~ and favorable position of the Mine is considered - the Area

are I think of great value.

The outcrop of an eight foot seam of coal was found last year and cut through its entire thickness - Morely considers it will be found to underlie the Gardener coal - I expect between the "Carroll" and "Gardener" seams - he has not defined the spot where found as soon as I get more definite information as to position &c will make you acquainted therewith.

Remain

Respectfully & truly yours
Joseph B. Moore
