McGill College,
Montreal.

May 24/72

My dear Sir,
Allow me

I thank you very sincerely for the many important memoirs you have been so kind as to send me, and especially for your last on the Trilobites, I have read this with much interest, and have noticed it in my annual address as President of the Natural History Society here, of which I shall

as I think Darwin him-
self admits in his last
edition, and as I have
endeavored to show
at some length in
papers on geology where
I have recently published
in the "Lancet",
a magazine published in
London.

I may add that
I am now prepared to
show that even sub-
divided into the humans
also that one species of

McGILL

Cent of Cambrian Archaeo

Gothus is a figure
Frammifer, and that
the typical Silurian
and Devonian Stromatolites
topora and Cucullata
are ventral Porroon
Frammifer very closely
allied to Le Canadense,
but by no means an
evolutionary improvement
on it.

Whole hope in the
future to send you some
definite facts on these
points.

In the mean time again
thank you ^{for your} ~~for~~ ^{kind} ~~kind~~ ^{interest}
Yours sincerely
J. D. Dawson
