

running East and West,
 At ~~the~~ ^{the western} extremity of the
 map it is cut across
 by a track in the letter
 of which it has been
 seen and beyond
 the track its course
 seems to be marked
 by a series of sinkage
 pits rising one high
 ground for about 300
 yards after which it
 is apparently shifted
 to the Northward by a
 fault and has
 not been traced

At the western extremity
 the map becomes gradually
 covered by a deep
 bed of ^{superficial} ~~conglomerate~~ ^{gravel}
~~and sand~~ W that
 it has not been
 traced, except of loose
 fragments embedded in
 the loam.

My own ^{belief} ~~impression~~ is
 that ^{the water} ~~it~~ will be found
 directed in a direct
 line along 600 yards
 on the property held by
 the parties & you agree
 that beyond this limit
 it can be traced and
 followed

ordinary properties which
 may be easily recognized
 but their real nature
 is at present understood
 difficult of deep excavation
 and lines of fault
 and should not be
 undertaken until the
 deposit has been opened
 on the very superficial plane
 where it now appears.

I have collected
 some specimens which
 will be furnished, but they
 are for the surface and the most of
 it of an ^{very} ^{shaly} ^{weathering}

to try in addition to
 what I have already
 unwashed the

4a

I have also made a bearing
trip to Glasgow and put
there the ~~contents~~ ^{described in my last} of the
specimen ^{band}. ^{Exposures}
There however at present
show with regard the
existence of numerous
small veins of speckles
in the stratum in suff
quent to indicate the
presence of the ore-bearing
band, and it is well
that we have secured
the right of descent on this
point as important
measure may be worth
for my return for the
last time a man
resident in the ground
& who from the very
beginning of the ground for
band of that locality

46

has succeeded in finding
its way half a mile
to the West and
three parts of a mile
to the South West of the
place where I saw it.

We have also had
the lines of the ^{2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100} light of
beams on the hemlock
been so adapted as to
include the greatest paper
value of its production
and to secure
the remainder as far
as possible.

x I may add that in 10 per
cent I can supply for a number
of years for some of the beams being
they will exceed the price of
the beams in my possession

REF.	31

I shall now return
 of ~~some~~ number and
 shall in a short time
 be prepared to give
 any more formal
 report that may be
 required. In the
 mean time you
 will please consult
 this and my former
 letters as to your own
 interests and that
 of gentlemen & when
 you may offer the
 propositions

Yours
 J. B. [Signature]
