

McGill College.

Montreal. Dec 19, 1872

To the Assistant Secretary
of the Geological Society

Sir; You will greatly oblige
me by presenting the Notes and
photographs sent herewith to
the Council of the Geological
Society at its next meeting,
and ~~they~~ request that the
Notes may be printed & at
least placed where students
of fossil botany may have
access to them.

Though I cannot but
be deeply grieved by the
^{rough} manner in which Mr
Cunniff is dealing with
the subject of Palaeozoic

has treated my communica-
tions in the Hera and
Land Conditions of the
Palaeozoic Period, and
which I hope have not
been without value, ^{in the promotion of Science,}
feel that in present cir-
cumstances and in order
to avoid the receipt of
replies ^{which is impossible always to anticipate,} to criticisms, ^{and which}
I am at too great a
distance to meet in the
discussions of the Society, it
will be better that I
should in future resort to
other channels of publication

Chas Dallas
~~Seiffers~~

In any researches which
I may make in Great
Britain, though I shall
still hope to be able
to communicate to the
Society any ^{thing} new or
important facts which
I may discover in general
geology.
