

Petit Meters 14 April 1846.

Mr. Dawson
Montreal

Dear Sir

I have your favour this morning - I will be happy to attend to your work as soon as the snow leaves -

If you choose, perhaps it would be best to send a barrel of plaster or artificial manure for your garden and grass - as our stable manure for a garden, not being properly rotted - apt to grow a lot of weeds -

The little point next to Pro. Parry would almost require a foundation with cedar and stones first - to prevent the earth sliding down the hill as 20 or 30 loads of earth laid there now would not be known - a little work there

would make a nice place -
one of the grand ones
like no limit outside place
how many feet wide?
from the mountain
