GEOLOGICAL SURVEY DEPARTMENT.

Alfred R. C. Schoyn, C. M. S., L. L. D., F. R. S.,

DEPUTY HEAD AND DIRECTOR,

MUSEUM AND OFFICE, SUSSEX STREET, OTTAWA.

October 28<sup>th</sup> 1893.

My dear Sir William,

On arriving here, at the office, I found that the specimens of Naradites which I had selected from the drawers + specimens - in the Museum - had not been packed or sent on to you. I had expected to take them down with me - but, <sup>it</sup> was quite impossible to get them ready in time the day I left.

This morning, however, we looked after them + Mr. Weston sent them on to you.

I think they will be more satisfactory. Mr. Whiteaves wished me to tell you that he has adopted the French name Asthenodonta ( $\alpha$ ,  $\sigma$   $\theta$   $\nu$   $\gamma$   $\sigma$  -  $\sigma$   $\delta$   $\nu$   $\tau$   $\iota$   $\kappa$   $\epsilon$ ) = (not - strong - tooth) - on account of <sup>the</sup> ~~the~~ being feebly developed.

I hope D.V. to be down for a day on Tuesday  
& Wednesday. for Tuesday evening & Wednesday  
Morning. Will try & see you Wednesday  
A.M. will take down with me the  
aptideans, I have here for the Redpath  
Museum from the Stewart Collection.

It is best writes & many thanks  
for your kindness in matter re  
Plain Valley Grad. Socy.

Yours sincerely yours  
Henry M. Allen
