

Sepulodendron

One leafy stem, many seen immediately below
Old stem - Leaf bases ^{junior} -
Nest elongate ^{8 in. - few leaves visible in} ~~cup~~ ^{of stem}
Many into one with ^{leaf} ~~leaf~~ ^{leaf}
as in some parts of New & appear
in vertical lines like ~~vertical~~

leaves. Leaf scar near the
top oval ^{trough} to ^{shallow} - was
Culm ^{part} ~~cut~~ in the ^{center} the
two ^{outer} ^{leaf} ^{below} ^{so} ^{as} ^{to}
form a ^{hollow} ^{shaped} ^{trough}
the ^{center} ^{of} ^{the} ^{middle}

^{the stem about 6 inches in diameter and length}
^{of stem was 3/4 inch in width. & a few leaf}
^{stems were}

Younger stems a ^{few} ^{inches}
with ^{small} ^{shells} ^{of} ^{the} ^{stem}
smooth with a few ^{leaves} ^{below} ^{the}
leaves ^{which} ^{are} ^{small} ^{and} ^{scattered}
shrublike with ^{the} ^{upper} ^{part} ^{of} ^{the} ^{stem}
obovate and ^{very} ^{close} ^{together}

Leaves about a line wide ⁸ ⁱⁿ ^{long}
width and two inches or more
in length. Some of them show the
joints, so they may have been ^{one} ^{or} ^{two}
half longer
