

Point Antonio. Malta.

29 March. 1887.

My Dear Sir William -

I hope you will persevere  
with the scheme mentioned in yr letter  
to Professor Stokes. I believe much can  
be done for useful results in these  
non-patrimonial ways.

I have sent a copy of yr letter  
to my Father - & to Sir John  
Lubbock.

The miscellanea remains

here are interesting. Among the  
fossils are very fine specimens of  
the teeth of the pygmy elephant,  
& many more might be got  
if the island folk took help  
with a few dollars. There are  
very large species of Swan, a large  
Dormouse, & numerous sharks,  
with Hippopotami, & a large

Kind of Elephant - We have had a  
delicious winter, in strong contrast  
to the weather in England.

Believe me

Yours  
truly  
L. A. C.

James  
Mezey
