

GEOLOGICAL & NATURAL HISTORY SURVEY,
 Alfred R. C. Selwyn, C.M.G., L.L.D., F.R.S., Director.
 MUSEUM AND OFFICE, SUSSEX ST., OTTAWA.

Sept. 17th 1888.

My dear Sir William.

In the box you will please

about 12 specimens

found 12 (twelve) specimens representing
 possibly two species respectively named
 A & B. They were all obtained from the
 Utica formation and from that part of
 the formation which may be termed the
 Middle Utica associated with Dicranurus
spinosus, Endoceras protosporus, Leptobolus
virgatus, Deliberoceras filosa etc. etc. As I
 leave in great haste this evening for
 Ramouaska - to meet Dr. Ellis I
 have not had time to make the
 notes on the stratigraphy for A
 & B - but will do so shortly.
 With all kind regards remain your truly
 (over S.V.P.) Henry M. Allen

P.S. When Dr. Kinde has examined
the specimens in question you are
at liberty to make a selection of
the specimens for the Redpath
Museum out of the Lot. 407
them however marked "to be returned"
we should like for our Museum
here. You may note whatever
you deem proper regarding them

truly
yours

Wm. H. A.
