

London 22^d June 1876

Dear Principal Dawson

I have just presented to
the Royal Society my ^{Religiosa} Report on
the biological results of my Cruise
last year in H. M. S. Porpoise to
Davis Strait; and in doubtless
I have not noticed your excellent
interesting paper in the Canadian
Naturalist for 1872. I have only
now seen it.

Can you oblige me with a
copy of this paper? It was
published in Vol. VI N. 4.

If I get it before the end
of next month it would be in
good time.

If you have a North American

specimen of the true Buccinum celatum
of Fabricius I should be glad to see
it, although I do not doubt your
identification.

I should be very glad to
welcome you when you next come
to the "old country". My residence
& address are

Ware Priory

Herts.

Please to give my kind remembrances
to Dr. Philip Carpenter and Mr.
Whitmore, &

Believe me

Yours very truly
J. J. Jeffrey

P. P. S. By your very kind invitation
I have sent you a copy of your paper, but I cannot find it.
I had no recollection of it.
