REF. 7

Bill

The last time examined and  
saw anything of interest  
that may remain, I have  
no doubt however that G. B.  
Carpenter will be more attentive  
to your wishes in this matter  
and perhaps come at the  
same address of the skeleton  
We have of course found  
nothing in the way of fossils or  
the discovery that the central  
parts of the plates  
which appear to be known East-  
ward are so little attended  
as to give hopes that we may  
yet find them produced

Quebec Feb 3<sup>rd</sup> 1877  
My dear Sir,  
Your last favor was re-  
ceived which with Mr. Bar-  
low on the (by guide) and I  
immediately delivered your  
message with regard to  
the Waterworks and also  
Mr. Barlow is glad to find  
that your opinions relative  
to the conclusions to be  
be had arrived with re-  
ference to the winter ob-  
and he would have been

I am dear Sir,  
Very faithfully,  
Your obedient servant  
Albert S. Hall

very glad had concern. We pitch tomorrow on the  
stones promise what can mount on our  
you at the mouth. We have three to four islands and  
not yet had our full day of towards travel the  
there but will probably go snowing upwards from the  
out shortly. Falls and peaks Eastward

to the Sagatoot.  
During the past fortnight I have to acknowledge the  
we have been in camp on the moving with many objects  
head waters of the Economy this aspect of the "Dawn of  
among the splendid expanse of Life". The subject in con-  
sions of the interesting authors with Geology is pe-  
cular. Some of the various cularly interesting to our  
approach the relation with should I be at the Cooper's  
their massive cliffs and which is possible I will not  
river beds of slate and por fail to examine carefully  
phyry the numerous positions of
