

certainly get it.

I have ^{read} completely over your "Acadian Geology" and I am going to commence it again & hope to understand it a little more than I did by the first reading. The reading of it has given me great pleasure, altho' I must admit I do not understand it, but then it is on a deep subject, and I am but groping in the dark but I will earnestly try if by a second perusal I can not obtain a little more light.

I am

Dear Sir,

I went down to the foggins to look for the piece of tree cumbering. I found, as I thought, the one, but on examination, it turned out to be a piece from about the middle of the tree. When I went to where we dug the stump out I found the hole completely filled up & a huge piece of stone laying over it & a great amount of other matter from the cliff round it. I saw it would take me about a day to clear away the stones &c., and as I had to be back here the same day, I could do nothing towards recovering the piece of stone.

However, should you particularly wish it, I may have occasion to visit the foggins again on business, & I shall take time to overhaul the matter & have a look over the piece & if then I shall

I must have been
to look for the piece of paper
found, as I thought, the one, but
in measurement, it turned out to be a piece
from about the middle of the 18th. This
I went to inquire and saw the stamp cut
from the top completely filled up &
a large piece of stone having over it
a great amount of other matter from the
cliff round it. I saw it would take
me about a day to clean away the
stone & as I had to do that
the same day I could do nothing towards
removing the piece of stone.
I am, however, very particularly
wish it I may have occasion to visit
the foppin again as business & labels
take time to overhaul the matter & as
as far as the piece of stone I shall

entirely of it.
I have thought you got "Oreodon"
but you are going to examine it
again & hope to understand it a little
more than I did by the first reading. The
reading of it has given me great pleasure
other I must admit I do not understand
it, but then it is so a deep subject
and I am not prepared in the least to
I will examine it if I can find time
I am not at all a little more right.

Yours Respectfully
