

Prof Bailey
Nov 77

Fredericton - Oct^r 31st 77.

My dear Sir

I take the liberty of introducing to your favorable notice the bearer of this letter Mr. Wallace Broad, of St. Stephen. Mr. Broad graduated with honors last summer from our University, taking at the same time the Duf-ferin medal for proficiency in Natural History, and has since then been acting as my assistant in the field. Having thus acquired a fondness for the practical as well as the theoretical study of science, he has determined to spend a winter in Montreal in attendance on your lectures and those of Dr. Harrington with the ultimate view of obtaining, if possible, a position on the working staff of the geological survey. As he seems to be thoroughly in earnest in this desire

and has thus far proved a diligent and successful student, I shall be pleased, both for his sake and that of his Alma Mater, if you can, by advice or otherwise, do anything to further his progress on the path which he has chosen.

I am glad to learn through Mr. Mulliken that you have in contemplation a new edition of the Acadian geology - The work of the past few years will necessitate some important changes in any revision of our N.B. geology.

Hoping that yourself and family continue in the enjoyment of good health, I remain
my dear Sir

very sincerely yours

L. W. Bailey
