

Nashua, N. H., Dec. 29. 1877.

Principal Dawson,

Dear Sir:

By to-day's  
express I have the honor to send you a copy of  
my report on the Modified Drift in N. H.

In my study of this subject I have been greatly  
indebted to your publications on the Post-glacials  
of Canada. If in any respects my opinions differ  
from those which have been held by you, I hope  
that the reasons presented in this report will appear  
sufficient to give them some basis. The prominent  
features in our surface geology throughout New England  
appear to be quite different from those presented for  
explanation in the St. Lawrence valley, - due, as it  
seems to me, to the circumstance of free drainage from  
the melting ice-sheet in its retreat from New England,  
while in the St. Lawrence valley it for a long time formed  
a barrier, preventing the present drainage toward the northeast.

Very Respectfully Yours, - Warren Upham.

Madam, M. H., Dec 29, 1877.

Principal Dawson

Dear Sir

By the way

I have the honor to send you a copy of  
my report on the Halifax Staff in M. H.

The my study of the subject I have been  
convinced to your publications on the Halifax

of course. It is very perfect my opinion is  
from those which have been told by you, I

that the reasons presented in this report will appear  
sufficient to give them some basis. The

features in our various papers throughout the  
appear to be quite different from those

explained in the M. H. course well, - but as it  
seems to me, to the presentation of your

the matter is left in its original form. The  
while in the M. H. course, which I for a long time

to have, - but the point which I have  
The M. H. course is -
