

Walcott

Allany, Mch 14th 1878

Prof. J. W. Dawson.

Dear Sir.

I wish to obtain fragments of rock containing *Eozoon* for the purpose of making sections for illustration when speaking of it. If I can obtain the needed material - in a rough state - from you or from some one to whom you may refer me, I will return an equivalent in fossils if desired. I sent to New York for "The Dawn of Life" Received word that it was out of print. Can I obtain a copy in Montreal? If so, if not too much trouble, will you tell me what price to send & to whom to send?

I have cut 95 sections of
Trilobites the past Winter. i. e.,
95 successful ones. which show
interior structure, or the parts
beneath the dorsal shell.
I now have 245 sections.
They show that the Trilobites
had legs, branchiae and mouth
as I mentioned in my notice
of Sept 1878. Trusting that
I have not intruded upon your
time and attention too much
by my request for specimens
& information, remain
very respectfully yours
Charles Walcott.

P.S. I wish to obtain sufficiently
large pieces of Cozoon to cut sections
 $2 \times 2 \frac{1}{2}$ in. i. e. if it is to be had.
