May 18<sup>th</sup> 78

Dear Frosser

Many thanks for  
your letter of the 28<sup>th</sup> ult. I  
have forwarded the same  
on to Taylor. We had a  
much better paper from  
Bidden than any one ex-  
pected, an "Earth Worms"  
with a good discussion to  
follow at the Ipswich S.S.  
I have been working at.

The coralline clay water  
hard lately and have found  
some new thing undescribed  
I was over at Sutton  
Orfordes last. The Alder  
pair is worth all the others

part. together. The idea  
that just now is most  
prominent in my mind  
is to purchase a yacht  
and go dredging on  
the South and West  
coasts for Bryozoa.

If you come across  
anyone who goes in  
for this particular branch  
of natural history, i.e. col-  
lecting Polyzoa I wish  
you would give them  
my name as the other  
way about.

I want if possible to  
get two other naturalists  
to come out with me

and pay a small part  
of the expense.

On the 15<sup>th</sup> of August.

The British Ass. meet  
at Dublin so I am  
afraid that I shall  
have to give up the  
scheme of meeting you

made in F.L.S. When  
in London the other  
day I attended one  
of these meetings and was  
delighted with one of  
the papers read.

I send this letter to  
the address you gave  
me some time ago.
