

## Quarterly Microscopical Journal,

P. O. BOX 2335.

8 Beekman Place  
New York, July 6 1878

Dr J. W. Dawson.

Dear Sir: In addition to the letter sent you a few days ago I send you a copy of our prospectus that you may see what kind of a journal we hope to publish.

If you are willing to allow us the use of your name on this we will feel under obligations to you.

While I was Prof. of Chemistry in a Chicago College you kindly sent me by request a few specimens of the stone containing Eozoon.

I have used this all up in examining the structure but as yet I have no really good slide from which I can show the organism as I would wish. For now and then I meet with lithologists who doubt its animal nature. If it is not asking too much will you be good enough to mail me a few fragments more at your convenience?

I remain dear Sir, very respy yours

R. Hitchcock
