

99 Dummermond Street.

My Dear Sir,

I take the liberty of writing you a few lines, concerning some geological specimens and information, for a geologist of Guernsey, which I wish to obtain, as I am unable to answer him myself, and as he is a son of a once well known scientific man there, the late Dr Lukis, possessing the best geological collection, in the Channel Islands. If therefore, I may trespass upon your time, would you be kind

P. P. Hammond's list.

My dear Sir,

I take the liberty of
 writing you a few lines, con-
 cerning some geological obser-
 vations and information, for a
 geological of Germany, which I
 wish to obtain, as I am in-
 able to answer him myself.
 and as he is a son of a once
 well known scientific man
 the late Dr. Schlegel, I am
 sending the best geological col-
 lection, in the German language
 of the time, I may perhaps see
 you some time, would you be kind

enough to tell me; where, I can procure a few specimens of our stone period, and a small piece of Labrador 'Elsfar', which he says he has had from Russia and parts of Asia, but wishes to know where it is worked up - Is granite known in this County in a crystallized form, it is plentiful in Guernsey in a semi-crystalline state, should there be no mica, would hornblende or schorl take its place - Can you also tell me, if there is any vegetable substance in an - thracite coal? I must apologise for troubling you with these questions, but have taken this liberty, as they are for a gentleman, interested in geology, though I am afraid, you may have many like queries to answer -

Yours very truly
Wameford Moffatt.
