

McGill College  
Montreal  
July 11, 1899

Dear Sir,

As the matter  
referred to in yours  
of the 6th inst is of  
an engineering nature  
rather than geological  
I have taken your  
letter to the gentleman  
named in this  
paper, to whom

I have every confidence  
if you desire it one  
of them will visit  
Cobourg and report  
on the question of  
water supply, with  
knowledge of the  
circumstances.

My own im-  
pression would be that  
as you are probably  
busy in the winter

REF. 121

Sometimes you will  
be able to get through  
as far as the Pt today  
probably more than  
double the depth  
you have at present  
reached before Tobby  
meets water.

Should you have  
heard of the gullies  
also named I believe  
we hope to advance
