Haber

18. Jan. 1829.

My dear Sir!

Excuse my long silence.

As I returned home five of my children became ill of whooping-cough, and two of them died.

The glass you mentioned I did not find in the box you were so kind as to give me.

I shall communicate to you some very interesting discoveries about the Laurentian Chalk some weeks hence: the "Canal-systems" of Eozoon are, according to my opinion see.

Algae (Pivularia) I gave them the name: *Eophyllum canadense* and shall name

one of the genus *Eophyllum*
after Your Name, if You
will give me the per-
mission to.

I found the abent-mentioned
plant even in the Serpentine

I trust to see You again?

Yours sincerely

Dr Otto Hahn.
