My dear Dr Dawson

I have returned the volume of *Bowerbank* you so kindly sent me, & I have made good use of it. The plates are wonderfully accurate and beautiful. The three vols will likely be added to the Parliamentary Library very soon.

The Alga I sent you seems to me the most remarkable instance of reptile contractility that we have in the lower Cryptogams, and is a great advance on the movements of *Diatoms* and *Ceillaria*. I should like to make out the seat of this peculiar power and shall be glad to know if any thing has been found out about it.

By the gentleman to whom you
sent it

Thanking you very much
for the use of the Book

Yours

Sincerely yours

A. S. King
