

Soliette 28th April 1880

Dr. Dawson

Dear Sir

As I will be in the neighbourhood of Soliette all this summer, and have plenty of time to spare. If you think good of it I can collect a good many specimens of birds here for the society, besides insects of various kinds &c. &c.

I having a Government Licence for collecting such during the time of prohibition it will give me great pleasure to do so, and all that I want is merely for you to say what you want, either in N. D. H. or

th Fossils of any sort I may come across in my rambles. It being all I have to do to kill time

I can send them in to town per Express, train, or boat just as you may wish or bring them along with myself when I return to town in the fall.

Your answer will oblige

P.S. I sent per Express yesterday eight very fine specimens of birds in King, Lushus Crow Blackbirds Blue birds & 3 different kinds of wood peckers. I have also seen Curloos here but have not as yet got a shot at them. besides many other species not very often seen at least I have not come

across them very often

der

Your Most Obedt
