Prof. J. W. Dawson

Sir.

As you had the kindness to notice a former communication of mine, I come before you once more, hoping that I am not trespassing too much upon your time. In my previous note I asked you what you thought of a book called "The Problem of Human Life", an anti-evolution vol. (enclosed find notice) you overlooked this item. I have read this work, but am hardly able to put a value upon it, and wanted your opinion of it. I have read some, upon both sides of the Evolution question, the strongest authority affirming, as Darwin, Wallace, Huxley &c. I now want the ablest work opposing. If you know of any better than "The Problem of Human Life" please name it. I only want to buy one book but I want it to be the best. By reputation you stand opposed to evolution. Do you oppose the "theistic form of evolution"? Have you any book upon the subject?

Yours Respectfully

W. H. L. Ciddleton

Prof. E. W. Brown

Dear Sir

I have had the pleasure of reading your paper on the evolution of the human brain. I am not surprised to find that you have reached the same conclusions as I have reached in my paper on the evolution of the human brain. I am sure that your paper will be of great value to the students of the Department of Human Life.
