

T. STERRY HUNT.

T. Hunt

Montreal, Canada,

Dec. 1, 1880

Dear Dr. Dawson

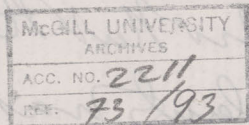

The "Tacome System" 2
1844 p. 72. is the Chapter V of the Agri-
culture of New York. printed apart. & if
you have that volume. is not worth get-
ting separately. I am greatly obliged
for your kindness in sending me a few.
New specimens of the Anthracite.
I also your pamphlet. on Coal plants.
As the matter is reported in the
Academy geology I can return
you the pamphlet. I hope in a
few days I will be the analyzer of
the coal. I find you stated in 1871
also that the coal of the St John
plants was anthracitic. Warrup-
ton Smith says that in the Wash-
ington coal basin the lower beds
are highly bituminous and the

upper beds are dry and anthracitic
I shall try to find details as to this point
which is very important.

with many thanks I am

Very truly yours

J. Steyerhamer

D. J. W. Lawson
