My Dear Dr Dawson

Your letter with the enclosed \times^4 of Quartz, as well as the two finely executed photographs of Mr Dawson & yourself, were duly received by mail. The latter were particularly acceptable as they will remind us of the pleasant, though too hasty visit you paid us in the spring.

The Quartz \times^9 from Leebce are very interesting

corite which I hope will be acceptable to
her. If Mrs Dawson could give me
any particulars of our mutual friend Dr Rigg-
by's death I should be pleased to have it. He was
a remarkable man, & a great geologist.

I wish you may have, sincerely, a successful
winter at Montreal, & as I cannot be with you,
with my two ladies, I hope you & Mrs Dawson
will sometimes think of us in the midst of your
many friends. With the kind regards of Mrs Chase
& my daughter to both you & M^r D.

Adeline M^r Fady & family
Yours &c
Anne Lea

for the "inclusions" which they
contain, viz cavities with carbon
dioxide. Many of these cavities
are beautifully formed being of
the regular formation of quartz -
& some with pure carbon.

I have given particular attention
to ^{the} gemination of these since
I have come home from Long
Branch & got a little settled.

Enclosed you will find
6 specimens of Quartz - double ter-
mination, beautifully limpid -
which you will please divide
between Mr Dawson & Dr Harrington.
I also send you Mr D.
some fine specimens of Mus-
