Lansan N.W.

Nov. 26th/01

My dear Dr. Dawson,

Your notes arrived in due time & I placed them all in Dallas' hands so that they might be read together at the meeting on the 16th. The abstracts have reached me this morning & I hasten to send it to you.

We had an exceedingly interesting meeting, but no lack of differences in opinion. Still all passed off very pleasantly. Dr. Hunt, your well known notice was present. My further notes have reference to a plant which I think shows characters which prove it to be unmistakably a land plant. The ant^{er} of anthracite

is very considerable & it is of
no use a material that only about
0.5 percent of ash is left after
burning. I have as you will

see given it a new generic

name as I could not see

any way to associate it

very close with any of your

genera.

With kind regards

believe me
Yours very truly
H. A. Richards
